motorsports thus far provides a glimpse of how other importers may strike out into the motorsports arena.

Mel Poole, a spokesman for Championship Auto Racing Teams (CART), the sanctioning body that governs the Indy car series, says: "It's becoming more and more important for Japanese manufacturers to do all the things that make them more a part of the American auto culture."

CART is considered the premier American racing venue, and the Indianapolis 500 is the biggest CART event. The Japanese have thus far stayed out of CART.

Poole says that while he has no assurance that any of the Japanese manufacturers are planning to field Indy teams any time soon, many have requested and received some key technological components needed to build an Indy-specified engine.

A motorsports program is an expensive proposition. Up front are the hard-to-quantify costs such as research, design and engineering. Add to that the costs of fielding a team and paying top-name drivers. Then come sponsorships, merchandising, promotions and advertising.

"Nissan races because it helps us merchandise our products," says Ronald Hannum, the company's general marketing manager. "But more importantly, it furthers Nissan's image as a manufacturer of performance products.

"Image-building activities like racing take a big chunk of money, and you can't always tell whether the activity results in more sales," he says.

Motorsports promotion falls under various departments from company to company. At Mazda, it's a function of marketing and advertising. At Nissan, Nissan Performance Technology Inc. operates with a budget all its own.

Motorsports enthusiasts think the best approach is the Nissan one, where motorsports does not have to compete with every other marketing and advertising program in the company.

"It's highly unusual to find an executive at the top level of an auto company who knows and understands motorsports," says a company insider who asked to remain anonymous.

"They're more likely to be golf or tennis fans, and favor those types of sports marketing campaigns over racing. At best, most of them are neutral about motorsports. It's really a better idea to spend money on racing than to piss it away on golf, but they don't see it that way."

Indeed, it is hard to tell how much of each manufacturer's sales growth comes from what it does in motorsports. It is even harder to determine whether more motorsports brings more prestige and sales to a company.

But it is clear that auto racing has become an important part of what the biggest Japanese importers are doing to turn up the heat in the U.S. marketplace. □

including Camry models produced in Kentucky and Corollas built in California.

According to Arnot, for the first 10 months of 1990, Toyota had 45,000 Corollas, it's most popular fleet vehicle, and 34,000 Camrys in corporate and daily rental fleets.

"The commercial segment seems to hold more promise for Toyota — and it can be a lot bigger," he says. "What's taking some time is that many of these companies and their fleet managers have had relationships with the domestic manufacturers for a long time.

"In many cases, we already have a fleet administrator's personal business," says Arnot. "They own a Toyota for their personal use, but their company has a policy that doesn't let them buy imports. It's a challenge for us to change that."

Tracy Tausch, director of customer sales and marketing for LMV Leasing, says the company began listing Toyotas and Nissans in its vehicle recommendation lists three years ago.

Tausch conceded that the Big 3 can build vehicles to specification and deliver them in about eight to 10 weeks, while it takes about 14 weeks for import manufacturers. "But the import manufacturers are doing a much better job, and are heading in the right direction in the areas of distribution, quality and pricing," he says.

"Toyota and Nissan are working the hardest to mirror domestic manufacturers as far as product and timeliness are concerned," he says.

Subaru of America has about 8,000 vehicles in fleets, mostly daily rentals. Its most popular fleet vehicle is Legacy sedan.

"It's tough for imports to penetrate the commercial accounts," says Charles Reed, national fleet sales manager. "Certain industries, like pharmaceutical companies, are very pro-domestic."

He noted that fleet administrators prefer mid-sized vehicles, while most Japanese makers sell compacts or subcompacts.

"The more progressive companies are looking at imports," he says. "If your vehicles are cost competitive and fit the bill, they will be considered."

Subaru is aggressively pursuing the fleet market, Reed says. "Fleet sales are 10 percent of the market, so it is hard to ignore." □

Vehicle sales in Mexico surge 21 percent in 1990

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Led by a huge jump in Volkswagen sales, Mexican car and truck sales jumped 21.31 percent last year.

Sales of Mexican-built vehicles by the country's five car and truck makers totaled 527,296 in 1990, compared with 434,669 the previous year, according to figures compiled by the Mexican Automotive Industry Association.

The rankings of the five companies were scrambled along the way. Volkswagen jumped from fourth place to first. Nissan slipped a notch after leading the industry for three years in a row. And Ford, which was hurt by a strike early in the year, dropped from third to fifth.

Still, Ford managed to increase sales during the year, as did every other maker except Chrysler.

For the second year in a row, Volkswagen took the domestic car sales crown. It captured 38.35 percent of the passenger car market, well ahead of Nissan's 22.88 percent. Ford and Chrysler had about 15 percent each and General Motors had 9 percent.

Volkswagen's surging Beetle led the charge. Sales more than doubled from 1989, to 84,245.

In addition to the 527,296 car and truck sales reported by the association, there were also 4,137 sales of heavy diesel trucks, 1,511 of buses and 5,376 of imported cars. The imports were brought into the country later in the year after the government lifted a ban.

Ford, which was short of product because of its strike, tallied 1,903 import sales, and its Town Car alone accounted for nearly one-fourth of imported car sales. Volkswagen had 1,129 import sales, followed by GM (1,102), Chrysler (675) and Nissan (557).

Ford was the largest exporter, according to the association, shipping 32 percent of the 276,859 vehicles exported. Of those, 249,921 were passenger cars and 26,938 were trucks.

Ford was followed by Chrysler (27.4 percent), Volkswagen (16.7 percent), GM (14.8 percent) and Nissan (9.1 percent).

According to the association, 238,271 of those vehicles went to dealers in the United States and 13,079 to Canada.

Nissan looks to U.S. sources for new engine

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — Nissan Motor Co.'s planned U.S. powertrain plant will deliver an "almost completely U.S.-made engine" when it debuts in 1996.

Although the engine is five years from production, the carmaker's U.S. manufacturing arm is already having preliminary discussions with engine-component makers in this country about supplying the engine.

Nissan announced in January that it will spend about $600 million to launch an engine plant in Decherd, Tenn., in 1996. But officials with Nissan Motor Manufacturing Corp. U.S.A. maintain that they have not yet decided what kind of engine it will be, whether it will be used for cars or trucks, or what the plant's production capacity will be.

Before the new engine is produced, Nissan's plant in Smyrna, Tenn., will begin building a replacement for the Stanza in addition to its current products, the Sentra and Hardbody pickup.

The company has had casual discussions with some of its existing suppliers about the engine project, said Stan Zdeb, director of engineering for powertrain and vehicle assembly with Nissan Motor Manufacturing in Smyrna.

Nissan assembles four-cylinder engines for the Sentra inside its Smyrna car and truck plant. Zdeb said that between 30 and 40 U.S. component suppliers have begun supplying that engine over the past year. Large components such as blocks, cylinder heads, crankshafts and camshafts come from Japan.

The Tennessee manufacturer also will assemble a 3.0-liter, six-cylinder engine to power a new minivan that Ford Motor Co. will build for both companies next year in Ohio.

Zdeb said that many of the local suppliers that have been selected for those projects will be likely candidates for the new engine.

"We'll be using the same suppliers in many cases," Zdeb said. "By the time we're up and running, it will be an almost completely U.S.-made engine."

Although the proposed Decherd plant will allow more localized parts into Nissan's engine assembly, several of the components will be produced in-house. It will contain an aluminum-casting foundry, which will enable it to cast and machine its own cylinder heads and blocks.

Plans additionally call for the plant to produce several other components, but company officials maintain that they have not determined what those will be.

"A lot of our existing suppliers are already asking us questions about the project," the executive said. "We'll show them the drawings and ask them for their ideas or any changes."

Zdeb said that most of the suppliers will be selected in 1993. Contracts for production processes will be signed in 1992.

"We'll be talking to a lot of suppliers between now and then," he said. "It's almost a simultaneous process. Working with suppliers on the design phase takes a long time. When we start finalizing the decisions in 1993, it will appear that we're making decisions right and left. But it will be the result of a lot of consideration that's already beginning."

The Old Way

The New COLORFILE System

A great new way to keep tabs on your service records.

One of the biggest drains on productivity in automobile dealerships today is the constant filing of and searching for file folders.

Now, Reynolds and Reynolds, a trusted name in business forms and communications systems for auto dealerships, has a solution for your filing problems... COLORFILE Filing System.

The COLORFILE System is a unique filing concept that features end tab, color coded folders designed specifically for automotive dealers and open shelf cabinet construction that helps aid in the efficiency and productivity of your Service Department. A better organized system ultimately can allow more time for you to sell your services and helps create a professional image to your customers.

For more information, contact your local Reynolds' sales representative or call 1-800-344-0996 for a FREE catalog.

U.S. auto trade deficit increases 12.7% in Nov.

WASHINGTON — U.S. exports of autos and light trucks continued to lose ground to imports last November, according to the latest trade statistics from the U.S. International Trade Commission.

The U.S. automotive trade deficit swelled 12.7 percent in November, as the value of exports fell 14.2 percent and the value of imports increased 7.2 percent.

The big contributor to the import gain in November was Japan, which boosted its value of car shipments 21 percent to $2.0 billion. Other major contributors to the surge included Germany, with a 16.6 percent increase, and Mexico, with a 126 percent gain.

Other countries increasing their value of U.S.-bound car shipments for the month were Sweden, France and countries classed as "others" in the report.

Nations that decreased their value of car shipments to the United States in November were Canada, down 3.6 percent; South Korea, 10.8 percent; the United Kingdom, 24.0 percent; Italy, 30.6 percent; and Brazil, 99.9 percent.

The value of U.S. car exports declined across the board during the month. The value of shipments to Japan was down 6.2 percent, even though U.S. exports to Japan are up 78.2 percent for the 12-month period ending in November. Car exports to Canada were down 19.6 percent, and exports were down 14.2 percent to all other nations combined in the report.

The annualized automotive trade deficit stood at $42.2 billion in November, less than a 2 percent improvement over the preceding 12-month period. The U.S. trade deficit in cars and trucks accounted for about 43 percent of the nation's total trade imbalance during the 12 months ended in November.

COMING EVENTS

General

March 10-14 — American Car Rental Association Convention, Walt Disney World Dolphin, Orlando, Fla., (202) 789-2240

March 18-19 — Doing Business in Eastern Europe, University of Wisconsin-Madison Department of Engineering Professional Development, University of Wisconsin-Madison, (800) 462-0876

March 19-21 — East/West Interfreight Conference & Exposition, Cargo Systems International and Hungarian Ministry of Transport's Institute for Transport Sciences, Vigado Concert Hall, Budapest, Hungary, 44 81 330 3911

March 20-22 — Managing International Joint Ventures, Michigan Business School, University of Michigan, Ann Arbor, Mich., (313) 763-1000

March 30-April 2 — North American Material Handling Show and Forum, Material Handling Industry of America, Cobo Center, Detroit, (800) 345-1815

April 3-5 — Interagency Motor Equipment Advisory Committee of the Southeast conference, General Services Administration, Hyatt Regency, Louisville, Ky., (404) 331-0918

April 8-11 — IPC '91 Programmable Controllers Conference and Exposition, Engineering Society of Detroit, Cobo Center, Detroit, (313) 665-0014

April 10-11 — Developing relationships with Japanese automobile manufacturers, U.S. Department of Commerce, Bismarck Hotel, Chicago, (202) 377-5479 or (202) 377-1418

April 10-12 — Intermodal Transportation conference, International Transportatin Association, Hyatt Regency Hotel, Baltimore, (301) 864-4163

April 14-17 — Raw Materials Seminar, Adhesive and Sealant Council Inc., Adams Mark Hotel, St. Louis, (202) 452-1500

April 19-20 — Auto Trim & Accessories Show, Taj Mahal, Atlantic City, N.J., (215) 644-6400

April 24-25 — Automotive Parts Manufacturers' Association conference, Convention Center, Hamilton, Ontario, (416) 366-9673

April 28-May 1 — National Association of Fleet Administrators Inc. conference, Atlanta Marriott Marquis, Atlanta, (908) 494-8100

May 6-9 — Premium Incentive Show, Javits Convention Center, New York, (516) 627-4000

May 14-16 — Contract Manufacturers Expo, Contract Manufacturers Association, Philadelphia Convention Center, Philadelphia, (313) 643-6807 or (800) 635-9885

May 14-18 — National Vehicle Leasing Association conference, San Francisco Marriot, San Francisco, (213) 838-3170

May 20-21 — Corporate Venturing Conference, Venture Economics Inc., Westin St. Francis Hotel, San Francisco, (617) 449-2100

May 22-26 — Autopromotec, Bologna Trade Fair Centre, Bologna, Italy

June 4-6 — Northeast Interagency Motor Equipment Advisory Committee Conference, Ramada Hotel, West Springfield, Mass., (212) 264-5772

June 4-6 — Inventory Management Exposition & Conference, Rosemont/O'Hare Exposition Center, Rosemont, Ill., (212) 557-6950

June 5-7 — Managing Transportation Carrier Quality Performance Seminar, University of Wisconsin-Madison/Extension Management Institute, Wisconsin Center, Madison, Wis., (800) 362-3020 ext. 2-8890 or (800) 262-6243 ext. 2-8890

June 11-13 — Superabrasives Conference & Exposition, Society of Manufacturing Engineers, O'Hare Exposition Center & Hyatt Regency O'Hare, Rosemont, Ill., (313) 271-0777

June 23-28 — Strategy: Formulation and Implementation seminar, The Michigan Business School, University of Michigan Executive Education Center, Ann Arbor, Mich., (313) 763-1000

Sept. 4-5 — Automotive Dealers Business Show, New Jersey Automobile Dealers Association, Meadowlands Convention Center, Secaucus, N.J., (212) 286-0333

Sept. 26-28 — National Auto Glass Conference, National Glass Association, Pointe Resort, Phoenix, (703) 442-4890

Oct. 16-18 — Access Expo, Washington Convention Center, Washington, (203) 775-0422

Oct. 21-14 — Materials Week, ASM International, Convention Center, Cincinnati, (216) 338-5151

Oct. 24-25 — TyreTech, *European Rubber Journal,* Berlin Congress Centre, Berlin, 44 939 250 383

Nov. 11-14 — Autofact, Society of Manufacturing Engineers, McCormick Place, Chicago, (313) 271-1500 ext.343

Nov. 13-15 — Access Expo, Expocon Management Associates Inc., Washington Convention Center, Washington, (203) 374-1411

Dealer conventions

March 13-17 — Iowa Automobile Dealers Association and Kansas Motor Car Dealers Association, Hyatt Regency, San Antonio, Texas, (515) 226-1900

March 14-19 — Missouri-Illinois Auto & Truck Dealer Convention, Desert Springs Marriott, Palm Desert, Calif., (314) 634-3011

April 3-7 — North Carolina Automobile Dealers Association, Southampton Princiss Hotel, Bermuda, (919) 828-4421

April 21-23 — Automobile Dealers Association of North Dakota, Holiday Inn, Fargo, N.D., (701) 293-6822

May 5-6 — Oregon Automobile Dealers Association, Red Lion Lloyd Center, Portland, Ore., (503) 233-5044

May 12-14 — American International Automobile Dealers Association, J.W. Marriott, Washington, (202) 659-2561

May 19-22 — Pennsylvania Automotive Association Convention and Exhibition, Hershey Lodge and Convention Center, Hershey, Pa., (717) 255-8311

May 23-26 — South Carolina Automobile & Truck Dealers Association, Hyatt Regency, Hilton Head, S.C., (803) 252-0205

June 8-13 Arkansas Automobile Dealers Association, Acapulco Princess Hotel, Acapulco, Mexico, (800) 727-1960

June 9-12 — Idaho Automobile Dealers Association, Sun Valley Resort, Sun Valley, Idaho, (208) 342-7779

Auto shows

March 7-17 — Geneva International Motor Show, Palexpo, Geneva, 022-798-11-11

March 11-17 — Quebec City Auto Show, Pepals of Laval University, Quebec City, Quebec, (418) 683-1991

March 13-17 — Atlanta International Auto Show, Georgia World Congress Center, Atlanta, (404) 432-1658

March 13-17 — Calgary International Auto & Truck Show, Round Up Centre-Stampede Park, Calgary, Alberta (403) 287-3893

Chrysler cuts dividend, will revise credit lines

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — In the next several weeks, Chrysler Corp. expects to finalize with its banks an agreement that reorganizes its lines of credit.

The move would help Chrysler withstand adverse market and economic conditions and help maintain the health of Chrysler Financial Corp., its financial subsidiary.

Meanwhile, as it copes with a weak market and recession, Chrysler's board of directors Thursday cut the quarterly common stock dividend in half — to 15 cents per share from 30 cents per share. The dividend is payable April 15. The dividend had been 30 cents per share since the first quarter of 1989.

"Reducing the dividend was the prudent and sensible thing to do in light of the dismal market conditions of the past few months," said Robert S. Miller Jr., Chrysler vice chairman. He added that the company hopes a resurgent economy will permit restoration of the 30-cent dividend "at some point in the future."

In February, General Motors cut its quarterly dividend to 40 cents per share from 75 cents per share.

Chrysler executives have met with a consortium of 38 banks led by Manufacturers Hanover Trust Co. to restructure the company's bank credit.

Chrysler now has a revolving line of credit of $2.64 billion on which it has never drawn. On Dec. 31, 1990, a total of 40 percent, or $1.06 billion, was available to Chrysler Financial.

Chrysler also had $3 billion in cash reserves at the end of 1990.

Under the new tentative agreement, the line of credit would be reduced to $1.7 billion, but the terms would be more flexible. About 40 percent of the sum is expected to be restricted for use by Chrysler Financial.

"You keep bank lines and pay a fee for what? For a rainy day," Chrysler Chairman Lee Iacocca said in February. "Well, it's raining. I mean hard. So you talk to the bankers."

The January downgrading of Chrysler's debt securities rating to "junk bond" status by Fitch Financial Wire and Standard & Poor's Corp. has affected the company's financial subsidiary adversely. Because Chrysler Financial's rating is linked to that of its corporate parent, the downgrading has restricted Chrysler Financial's access to commercial paper and has raised borrowing costs.

On Dec. 31, Chrysler Financial's commercial paper outstanding was only $1.1 billion, down from $10.1 billion a year earlier.

During 1990, Chrysler Financial also increased its sales of receivables, and in the second quarter it began drawing on its own bank credit lines. As of Dec. 31, 1990, Chrysler Financial had $6.2 billion of short-term bank borrowings outstanding. Chrysler Financial has its own lines of credit with 185 banks. The lines of credit total more than $13 billion and extend through the end of 1993.

Chrysler indicated in February that it was seeking a "minority partner with a triple-A rating" to take a minority stake in Chrysler Financial and boost the subsidiary's credit rating.

Chrysler Financial earned $313 million in 1990 and helped its parent stay in the black and report net earnings of $68 million.

Consumer Reports still a foe of A-604

Chrysler Corp. executives held a three-hour meeting last week with representatives of *Consumer Reports*, but there were no indications that the magazine would retreat from its position that buyers avoid models equipped with Chrysler's A-604 automatic transmission.

"We stand completely by everything we said in the magazine," said David Berliner, assistant director of Consumers Union, publisher of *Consumer Reports*.

Chrysler President Robert Lutz led the team of marketing and engineering representatives who were expected to tell the magazine that transmission reliability problems cited by the publication have been corrected.

The 1.4 million vehicles equipped with the 2½-year-old transmission include most Chrysler minivans.

Mazda workers voting on pact that mirrors Big 3 deal

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Hourly workers at the Mazda Motor Manufacturing (USA) Corp. assembly plant near Detroit will vote today on a tentative three-year contract agreed to by the company and the UAW March 4.

A union official, who did not want to be identified, said highlights of the new contract include:

- Wage parity with hourly workers at General Motors, Ford Motor Co. and Chrysler Corp. Wages will rise from $13.61 to $16.50 an hour.
- Creation of a Jobs Bank program, similar to Big 3 programs that assure workers of full pay in the event of layoffs.
- Improved sickness and accident benefits.
- Four additional paid days off.
- The same pension benefits as Big 3 workers.

The Jobs Bank program is important because company officials have said that some hourly jobs will not be needed when the plant begins producing the reskinned Mazda 626 sedans and Mazda MX-6 coupes for the 1992 model year. The Ford Probe also is built at the Flat Rock, Mich., plant.

An automotive consultant told *Automotive News* that up to 350 of the 2,900 hourly jobs may be cut during the new model changeover.

Workers in a Jobs Bank perform non-traditional assembly plant work, such as aiding community organizations or attend classes, and are paid their full wages.

A company official also acknowledged that Mazda Motor Manufacturing may trim its supplier base to provide work in-house for employees whose jobs may be eliminated.

Mazda is the only wholly owned Japanese assembly plant in the United States that is represented by the UAW. Analysts believe non-union transplant factories will sweeten their salary and benefits in an effort to keep the union out.

"I would think the other transplants would likely match the financial package in the not too distant future," said Harley Shaiken, a labor professor at the University of California at San Diego who watches the auto industry.

Added Dale Brickner of the Michigan State University School of Labor and Industrial Relations: "The (Japanese) companies will try to match the wage and benefits package if they are serious about keeping the UAW out."

In addition to Mazda's plant in Flat Rock, there are five other Japanese-owned assembly plants in the United States.

Nissan Motor Manufacturing Corp. U.S.A. has a plant in Smyrna, Tenn.; Honda of American Manufacturing Inc. has factories in Marysville and East Liberty, Ohio; Toyota Motor Manufacturing U.S.A. Inc. has a plant in Georgetown, Ky.; and Subaru-Isuzu Automotive Inc. operates a factory in Lafayette, Ind.

The Associated Press contributed to this report.

Bryan launches effort to speed air bag installations

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The industry's progress in installing air bags hasn't satisfied four senators who have introduced a bill that would mandate the devices on all cars in the 1996 model year and on light trucks in 1997.

The bill was co-sponsored by Sen. Richard Bryan, the Nevada Democrat who is pushing the industry to adopt higher corporate average fuel economy standards. Automakers, who strongly oppose his CAFE stance, called Bryan's air-bag bill a dangerous precedent and said it would strip them of their flexibility in meeting safety rules.

Big 3 speed up truck plans, Page 29

Jerry Curry, administrator of the National Highway Traffic Safety Administration, acknowledged that the bill could help put more air bags in use but called it "regulation for regulation's sake."

The current law, which took full effect in the 1990 model year, requires only that cars have front-seat passive restraints — usually air bags or automatic seat belts. Under a special provision, cars can carry a driver-side air bag as their only passive restraint if they add a passenger-side air bag for the 1994 model year.

Bryan's bill would require driver- and passenger-side air bags for cars in model year 1996. Light trucks would have to have driver-side bags in 1997 and passenger-side bags a year later.

Passive restraints aren't currently required in light trucks, but NHTSA is expected to change that later this month. The anticipated rule would require them in 20 percent of light trucks in the 1994 model year, 100 percent in 1996.

Manufacturers aren't expected to have problems meeting the Bryan bill for its cars. Most automakers have plans to put air bags on a substantial percentage of their car fleets by the mid-1990s.

But Chrysler Corp., the industry leader in air-bag installation, said: "We do not favor legislative mandates for specific designs or mandates like air bags."

Toni Harrington, a lobbyist for Honda North America Inc., said the bill would legislate a "design standard." She called that a dangerous departure from current practice, where automakers are told what measurable crash-protection standards they must meet and are given the option of how to comply. "Now they want to tell us what we have to do," she said.

Curry said 90 percent of all cars on the road in 1994 will have air bags. "We can get the other 10 percent in the next year."

The bill was co-sponsored by Sen. John Danforth, R-Mo., who has backed unsuccessful auto safety bills before. The other sponsors are Slade Gorton, R-Wash., who is also a sponsor of Bryan's CAFE bill; and Brock Adams, D-Wash., a former U.S. transportation secretary.

SALES

FROM PAGE 1

lowest April-June quarter in 33 years.

The Persian Gulf war ended the day before the month ended, leaving little chance for any postwar euphoria to show up in February sales results. Still, the February decline in car and truck sales — 13.7 percent to 913,059 cars and light trucks — looked better than January's miserable performance, when sales fell 27.7 percent from 1990 levels.

And on a daily selling-rate basis, the industry showed steady improvement as the month progressed. In February's final selling period, sales were down 7.6 percent from a year ago, to 369,225. That compares with a 15 percent decline in the middle 10-day period and a 22 percent fall that opened the month.

By March 1, the total stock of unsold cars declined slightly to fewer than 2 million units, the equivalent of a 77-day supply. That compares with 95 days on Feb. 1.

But the supply was higher than the 70-day level of March 1 last year and the seven-year average of 61 days for the date.

During February, domestic car stocks declined to a 69-day supply from an 89-day supply on Feb. 1. Although there were more unsold import cars in stock, February's selling-rate improvement reduced the inventory from 111 days at the beginning of the month to 101 days on March 1. The monthly sales decline affected cars and trucks almost equally.

February car sales were down 13.7 percent to 621,853; light-truck sales fell 13.9 percent to 291,206.

Big 3 sales dropped 14.8 percent to 656,132 cars and light trucks.

Japanese companies suffered less, posting a 9.2 percent decline in total car and truck sales, to 222,073. Their comparatively better performance came despite predictions that consumers might avoid Japanese nameplates in reaction to Japan's restrained support for the allied cause in the Persian Gulf war.

Among the Big 3, General Motors recorded the biggest decline and Chrysler Corp. the smallest. GM sales fell 18.4 percent to 315,333 cars and trucks. GM's Saturn division sold 2,056 cars.

Ford Motor Co. sales were down 13.3 percent to 224,487 cars and trucks. Ford Division cars posted an 8 percent increase in the final selling period. Escort, Tempo, Taurus, Thunderbird and Probe sales all improved their year-ago totals in the final stretch of the month. Both periods had seven selling days.

Chrysler's sales were down 8.6 percent to 116,312 cars and trucks.

Light truck sales had been a particular worry for Chrysler. Consumer Reports told buyers in January to avoid Chrysler products with the A-604 automatic transmission, but Chrysler minivan sales increased in February from last year.

Chrysler immediately began an aggressive public relations campaign to counter the *Consumer Reports* article. Chrysler also has a $1,000 rebate on its minivans and has been heavily advertising their safety features, including driver's-side air bags. Last month, sales of Chrysler's minivans topped the anemic year-ago month by more than 40 percent for each model.

Sales for the leading Japanese companies fell below the monthly average decline. American Honda Motor Co. was down 21.3 percent to 48,060; Nissan Motor Corp. in U.S.A., down 25.6 percent to 25,568; and Toyota Motor Sales U.S.A. Inc., down 15.9 percent to 50,202.

European imports continued to suffer after pulling buyers ahead into December so they could avoid the new luxury tax that took effect Jan. 1. Jaguar Cars Inc. had a particularly dismal month, despite the fact that from Feb. 1 to April 15, Jaguar is rebating up to $3,360 in luxury taxes on its XJ-s coupes and convertibles. February Jaguar sales were down 61.5 percent to 568.

Mercedes-Benz of North America Inc. was down 31.5 percent to 3,981. Rival BMW of North America Inc. fell 18.2 percent to 3,365, but that was an improvement over January, when BMW sales fell 48.2 percent. Sales for Volvo Cars of North America, which has few models over $30,000, were down 9.1 percent to 5,725.

LIGHT-TRUCK MARKET SHARES

Reatta dies; 4-year output is less than 20,000 units

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors last week scrapped the Buick Reatta, the handcrafted, luxury two-seater that was introduced barely three years ago.

Buick sold 17,900 Reattas in three model years — 3,000 in 1988, 7,900 in 1989 and 7,000 in 1990. When production ends May 10, only 1,500 of the 1991 models will have been built at the Reatta Craft Centre in Lansing, Mich.

Just last September, Buick General Manager Edward Mertz said the division had plans for the Reatta at least through 1998.

"The two-seat luxury market did not continue to grow as we expected," said Darwin Clark, Buick general marketing manager.

James Reilly, president of Reilly Buick-GMC Truck Inc. of Colorado Springs, Colo., said the Reatta was a nice car, but was expensive to floorplan and often took three or four months to sell.

"I guess it's hard to mourn the loss of a car that wasn't a fast mover," he said.

At one time, Buick thought the niche for luxury two-seaters would support 15,000 to 20,000 Reattas per year, Clark said.

GM announced last week that the facility — to be renamed the Lansing Craft Centre — will produce GM's new electric car. Many of the workers will be recalled when production of the electric car begins, perhaps as early as 1993.

Sales charts compiled by Karen Detkowski

GM's electric car is expected to look similar to Impact, a test vehicle unveiled last year.

ELECTRIC

FROM PAGE 1

In 1980, Baker was chief engineer of the GM electric-car project that involved converting Chevrolet Chevettes to electricity. That project never got off the ground, and Baker moved to Buick.

Former GM Chairman Roger Smith said in April 1990 that the company was committed to producing an electric car based on the Impact concept vehicle introduced at last year's Los Angeles auto show. Last week, GM President Lloyd Reuss said the initial production site for the car will be the Reatta Craft Centre in Lansing, Mich., which will be renamed Lansing Craft Centre. Room for the electric car was created when the Buick Reatta was canceled.

A source at GM Electric Vehicles said that while the car will be based on the Impact, it will not be called the Impact when it reaches the market.

The car probably will look much like Impact and its mechanicals will be based on the concept car, but developments since the Impact's debut will make the production car different, the source said.

There had been speculation that the Van Nuys, Calif., assembly plant would be a logical place for production because California clean-air laws require zero-emissions vehicles in the 1998 model year. Van Nuys now can be considered for another project in the works: A hybrid minivan that would meet California standards for ultra-low emissions, required in the 1997 model year.

GM Electric Vehicles has been working on engineering, production and marketing plans for some version of a hybrid vehicle that would result from Project Freedom. One such vehicle, dubbed HX3, was shown earlier this year in Detroit.

The Freedom vans — still far from final form — are four-wheel drive or all-wheel drive. As in the Impact, separate electric motors power each drive wheel. The motors get power from batteries, which are recharged with a generator driven by a 906-cc gasoline engine. No plans to produce Freedom vans have been announced.

Simonetti said there are no plans for GM Electric Vehicles to be a separate marketing division for electric cars. "Certainly, we plan on having our existing dealers involved in this," she said.

WOMEN

FROM PAGE 1

Harrington feels the progress of women in the business has been slow. But she says the number of women entering engineering and business fields is growing, which will help increase the number of female executives in the future.

"The auto industry is male dominated. I have been here 20 years, and it has slowly changed. At first it was, 'Who is this little girl and why is she here?' "

One of the few women who bucked the trend and succeeded in traditional carmaking roles is Helen Petrauskas, Ford Motor Co. vice president of environmental and safety engineering.

Petrauskas, 47, who holds degrees in law and mathematics, joined Ford in 1971 and was promoted to director of automotive emissions in 1980, executive director of automotive emissions in 1982 and vice president in 1983.

She also attributes the predominance of males in the automotive field to its grass roots — engineering and science. "The kind of business we are in is a highly engineering/science-oriented business. We are just now beginning to see women progressing because they have been out of school long enough to be able to progress up the ranks."

Petrauskas sees the situation at the top changing as more qualified women graduate with technical degrees. She cites the increase in professional technical organizations as evidence of women's increased interest in this field.

"If these organizations had been around when I was in school, there would have been two of us in them. It takes 20 years in the business to reach the levels of management we're talking about. If you go back 20 years, you will see a small percentage of women engineers. It just takes time."

In 1960, there were just 7,404 female engineers in all U.S. industries; by 1990 the number had grown to 174,000, according to *Personnel Journal*, a magazine for human resources executives.

Women now account for about 25 percent of engineering school enrollment, according to David E. Cole, director of the Office for the Study of Automotive Transportation at the University of Michigan.

Cole believes it should be 50 percent. "We need to make sure we eliminate the stereotype of only males excelling in math and science and we need to reinforce the idea of the tremendous loss of this national resource — women."

Ford lists only seven women in upper management positions. Ford spokesman David Krupp says: "We are trying to catch up and right any wrongs that have been in place for years; women were overlooked. We are accelerating the pace — the company is very aware of the need to step up to this problem."

General Motors has three female vice presidents and two female outside directors. GM spokesman John Maciarcz says: "Statistically, we are improving in the face of the declines in overall employment."

None of the women at GM contacted for this article consented to be interviewed.

The lack of women in upper management positions in past years is an obstacle in itself, according to Gail O'Sullivan Neuman, vice president of human resources and general counsel for Nissan Motor Manufacturing Corp. U.S.A. in Smyrna, Tenn. Its sales organization, Nissan Motor Corp. in U.S.A. in Carson, Calif., also lists one woman vice president.

What women executives think:

Toni Harrington
American Honda Motor Co. Inc.
Manager of government and industry relations

I think there is an institutional bias in the industry because they are not used to dealing with women. . . .I have been here 20 years and it has slowly changed. At first it was, 'Who is this little girl and why is she here?'

Helen Petrauskas
Ford Motor Co.
Vice president of environmental and safety engineering

It takes 20 years in the business to reach the levels of management we're talking about. If you go back 20 years, you will see a small percentage of women engineers. It just takes time.

Esther DeLurgio
Mitsubishi Motor Sales of America
Director of information systems

Detroit is a very structured way-of-life city, with the male in his place and the woman in hers.

I lived in the Midwest, and I think career opportunities are greater here than in the Midwest.

Cheryl Longtin
ITT Teves
President

You have always had the traditional macho image with the car companies.

This was compounded with the historical way one succeeded in these companies, through engineering or operations background.

"In the automotive industry, many men have been around for 20 to 30 years at the same companies," Neuman says. "If you presume the men are capable, and if you presume they are better experienced by virtue of their seniority, it seems it would be a natural phenomenon that you will find men in these positions. They have a tremendous amount of seniority on the number of women who entered the industry within the last 10 to 20 years."

Laurel Cutler, 64, was a consultant to Chrysler for three years before joining the No. 3 automaker as vice president of consumer affairs. She held the position for two years while also serving as vice chairman of FCB/Leber Katz Partners, a New York marketing consultancy. She left Chrysler at the end of 1990.

Cutler recently called Detroit the "last locker room" composed of "white, macho, middle-class, Middle-Western males."

Chrysler spokesman Tom Houston says: "It is true that Chrysler's first and only female vice president was Laurel Cutler, and she left us, and there has not been another one named. There is no particular reason there are no women in top management positions — it just happens these high-ranking positions are filled with men."

Two of Chrysler's outside directors are women, and Chrysler Financial Corp. has a woman vice president.

Some women in automotive executive positions outside Detroit cite its "narrow-minded" and "conservative" aura as the reason the whole industry takes a bad rap for its treatment of women.

Esther DeLurgio, director of information systems at Mitsubishi Motor Sales of America in Cypress, Calif., says: "Detroit is a very structured way-of-life city, with the male in his place and the woman in hers. "I lived in the Midwest, and I think career opportunities are greater here than in the Midwest."

Mitsubishi lists four women in upper management positions.

Last year, Jennifer Hurshell, 34, left the public relations firm she co-founded to become director of public relations for Volkswagen of America Inc. in Troy, Mich. She called the auto industry "a relatively conservative market as a whole" and says there has been a gradual change in the acceptance of women in upper management.

"We have a ways to go until the numbers start evening out, but I think there is a willingness to accept women into the top ranks of management," Hurshell says. "Women have a contribution to make that is being received finally in a very positive way."

She is the only woman in VW's upper management directory.

Mazda Motor of America has one woman vice president, but spokesman Tom McDonald says: "A lot of women are coming along into middle management. In the next five to 10 years, you're going to see more of them in upper management and senior executive positions."

Toyota Motor Sales U.S.A. has no women in executive positions. Mindy Geller, a Toyota spokeswoman, says, "Women have come into the field much later than their counterparts (men) and subsequently are just now rising through the ranks into higher positions."

Women executives say discrimination also exists in auto-related industries. Cheryl Longtin is president of ITT Teves, a supplier of brake systems and components. She calls women in executive positions the "rarity" in Detroit.

"You have always had the traditional macho image with the car companies," she says. "This was compounded with the historical way one succeeded in these companies, through engineering or operations background."

Former owners of rental firm sue Mitsubishi

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The honeymoon was short for the Cohen family, minority shareholders in Value-Rent-A-Car, and Mitsubishi Motor Sales of America Inc., which acquired 80 percent of the daily rental company from the Cohens last July.

On Feb. 6, Mitsubishi suspended four members of the Cohen clan who served in executive positions at Value while it investigates whether they were involved in cocaine possession, electronic bugging of Mitsubishi offices and misappropriation of company funds.

A Florida Circuit Court judge has given Mitsubishi until March 25 to reinstate or fire the Cohens.

"So far, Mitsubishi has placed my clients in the twilight zone because they did not terminate them," said Alan C. Kauffman, attorney for the Cohens.

The Cohens have sued Mitsubishi in Broward County Circuit Court for suspending rather than terminating them — a step that would have precipitated a potential $30 million payout to the Cohens by Mitsubishi.

The suit, which asks for damages of about $70 million, claims Mitsubishi broke its management contracts with the Cohens by conspiring to remove them from their executive posts and devalued their stock by insisting that Value purchase Mitsubishi cars instead of lower-priced Ford vehicles.

Sidney Cohen, president of Value, and sons Jeffrey Cohen, senior vice president of finance and Steven Cohen, vice president of operations, were suspended but continue to collect their $156,000 salaries and other benefits.

In a second lawsuit, Wendy Cohen, vice president of marketing before her suspension, claims she was bullied and wrongly confined at Value's Regional Operations Center in Fort Lauderdale, Fla., by security guards paid by Mitsubishi.

Mitsubishi became the first importer to acquire a majority stake in a U.S. daily rental company in a deal that involved the purchase of Value's real estate and a $15,000 monthly licensing fee to the Cohens for 20 years.

Five-year employment contracts with the Cohens, including compensation based on performance, were also part of the deal. In addition, the Cohens get 10 percent of Value's pretax profits for five years, not to exceed $15 million.

Enhancing the package further is a buyout clause at the end of five years, which was an incentive for the Cohens to manage the company efficiently so the value of their remaining stock would increase.

That was the trip wire that set off a mine field of disputes.

The Cohens opted to buy cars from Ford for Value's 20,000-vehicle fleet rather than from Mitsubishi. According to Kauffman, the difference in price was $25 million. He said Value's new management is replacing Fords with Mitsubishis.

Martin Reeder, attorney for Mitsubishi, said the four Mitsubishi directors on Value's board voted to buy the Ford vehicles and to finance them through Mitsubishi.

He conceded that Value is replacing its Ford cars with Mitsubishi vehicles, but he said the Mitsubishis are priced competitively.

Reeder declined to discuss the investigation except to say it is continuing.

"The Cohens were suspended because although the board had probable cause to take the action it did to protect the interests of the company, the board wanted to conduct a fair investigation and give the Cohens an opportunity to cooperate," he said.

Mitsubishi suspended the Cohens, saying they may have installed electronic bugging devices in the office of Kazuo Yoshida, a director and executive vice president of Value, according to documents filed with the Cohens' suit.

Other reasons cited by the importer for suspending the Cohens include suspicions that they may have diverted company funds, and that Steve Cohen was arrested by Boca Raton police in January and charged with cocaine possession. Kauffman said the Cohens deny those allegations and that the felony charges against Steve Cohen were dismissed.

Feb. output sings blues

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Twenty-one Big 3 assembly plants in the United States and Canadian plants are closed and one U.S. car line is idle this week as the automakers battle slow sales and high inventories.

In February, 422,222 cars were assembled in the United States.

That was the lowest car production total for February that month since 1975.

U.S. truck production fell to 208,979 units.

It was the lowest total for February since 1983.

Light-vehicle output also fell in Canada.

In February, 66,676 cars were assembled — the lowest since 1982.

Truck output totaled 56,352, which was the lowest since 1983.

HONDA LIVES!

Sales have slipped; press has pounced, but importer says the worst is over

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

The big news about Honda these days is the wagon.

Not the new Accord station wagon that went on sale in December, but the bandwagon that the national press has jumped on in reporting about American Honda Motor Co.'s fall from grace.

"U.S. cars depose Honda." That was the headline on a *Chicago Tribune* story reporting that the Chevrolet Cavalier and Ford Taurus, popular fleet cars, had slipped past the nation's best-selling car of the last two years, the Accord, in January and February.

Kawamoto tightens up structure, Page 2

The story cited evidence of renewed U.S. patriotism in light of the Persian Gulf war. Most of the stories tie Honda's sales to Japan's lukewarm support of the war, although Japanese automakers have actually gained market share. (See related story on Page 36.)

Honda sales fell 21.6 percent during the first two months of the year compared to the year-ago period. That's slightly above the industrywide drop of 21.0 percent.

In recent weeks, publications ranging from *USA Today* to *The Wall Street Journal* have put Honda under the magnifying glass.

The reports suggest that the days when Honda could do no wrong are over.

"Honda, the seemingly invulnerable, bulletproof car company, is taking some hits," reported *USA Today*. "And unlike its chief rivals, Honda is a relatively small firm that can't simply reach deeper into the corporate pockets to get by."

ARKIE HUDKINS

The sales declines in January and February started the change in coverage. The flames were fanned in early January when Honda put a $300 dealer incentive on the Accord — the nation's best selling car in 1989 and 1990.

Weeks later, Honda announced production cuts at U.S. and Japanese plants. Then *Automotive News* reported that Honda was stockpiling more than 2,000 unsold Accords a few miles from its plant in Marysville, Ohio.

Finally, Honda increased its $300 dealer incentive to $500 and was offering dealers an additional $400 incentive for each new car they order from the company.

. Add to all that the belief that American buyers may reject Japanese products in light of that country's feet-dragging in the Persian Gulf war, and there was plenty of fodder for the press to feed on.

Despite the new tone of press stories, Tom Elliott, executive vice president at American Honda Motor Co. Inc., is calm.

"We always have known that there'd be times when it'd be tough," Elliott said. "But we have always been less affected. But a lot of that is because of a lot of hard work on our part, not because we're somehow invincible."

Elliott thinks the worst is over

Toyota, Honda stay on top in sales per dealer

Lexus is 3rd; Ford tops Big 3

By John K. Teahen Jr.
SENIOR EDITOR

In 1990, the winners in the sales-per-dealership derby again wore Japanese emblems, and the Japanese invited a couple of new friends to their party.

Toyota retained the top spot in new-car and truck sales per outlet with an average of 847 deliveries, and Honda repeated as runner-up with 742 — even though it doesn't sell trucks.

The order was reversed in car sales. Honda's 742 sales per franchise were far ahead of second-place Toyota's 609.

Third place in both categories went to one of the new players. Lexus, the luxury car imported by Toyota Motor Sales U.S.A., averaged 608 new-car sales per dealership, only one less than its older brother.

The sales per dealer averages are another way of keeping score in the auto industry. They measure the relative value of a franchise by showing the relationship between the number of new-vehicle sales and the number of dealers selling those vehicles. They also help automakers and importers set their dealer placement strategies.

In the 1990 car-truck rankings, seven of the Top 10 were Japanese makes. Nissan, Acura, Mitsubishi and Mazda joined Toyota, Honda and Lexus in that group. Like Honda and Lexus, Acura made it on cars alone.

The Top 10 in the car standings also included seven Japanese makes. Following Honda, Toyota and Lexus were Acura, Nissan, In-

GM Canada studies lineup, may add a Geo operation

By Alex Law
STAFF CORRESPONDENT

General Motors of Canada is considering extensive changes in its product lines, including the possibility of setting up a Geo network and letting its two primary dealer groups sell Saturn.

Michael Erdman, the company's vice president of marketing, said the group he appointed last fall to review the company's product lineup should be reporting to him in a couple of weeks.

"If we're going to do something, we'll start to do it this fall," said Erdman, who left Chevrolet in the United States for Canada last summer.

GM of Canada's dealer network is split into two main groups: Pontiac-Buick-GMC Truck and Chevrolet-Oldsmobile. Both are eligible to sell Cadillac.

In addition, the company in 1987 created a separate unit, the Passport International Automobiles Division. Like the Geo operation in the United States, Passport is intended to appeal to import buyers and carries vehicles built by GM's overseas affiliates. Passport has also been designated to distribute Saturn when it goes on sale in Canada next year.

But now, Erdman said, "the Passport concept will disappear. The internal organization will go away."

"I think the day will come when we will totally integrate Passport with the domestic operations," he said.

GM of Canada has been wrestling with the fact that many Canadian consumers watch American television and see advertising pitches for GM products that Canadians do not recognize. Canada has no Geo line, but the equivalent of the U.S. Geo Storm is sold in

Ford, GM lengthen program-car cycle

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. and General Motors are tightening the tap on program cars, the nearly new daily rental units sold to price-smart consumers by dealers. The squeeze could prime the pump for new-car sales and boost GM and Ford profits.

The time Ford's 1991-model program cars spend in service at daily rental companies will be lengthened to six months or 15,000 miles from four months and no minimum mileage. It will affect new cars and trucks built after April 30.

GM will follow by lengthening the cycle of its 1992 program cars.

"We are developing rental-car plans for the 1992 model year, and we expect program vehicles to have a longer in-service holding period," said a GM spokesman.

Program cars have come under fire by dealers who say the clean, low-mileage cars steal from new-car sales. Moreover, lengthening the cycles could boost the wholesale prices of the vehicles at dealer auctions, a repercussion manufacturers would welcome.

"The concern is that there are more cars than can be absorbed by dealers at the auto auction," said Mike Shad, chairman of the Ford National Dealer Council. "Reducing the number of turns will drive up prices at the auctions."

Though it's hard to calculate, manufacturers probably lose money on program cars. A spokesman from the Ford Dealers Alliance, an association of 1,500 Ford dealers, says Ford has an average loss of $2,900 per program vehicle.

Even auction officials concede

Saturn sticks to stickers

As production increases, Saturn dealers such as John B.T. Campbell III say they are selling cars quickly and sticking to sticker price. Story on Page 36.

Mercedes probed for alleged embargo violation

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — German police late last week raided the headquarters of Mercedes-Benz AG and seized documents as part of an investigation into charges that the company violated an arms embargo against Iraq by shipping 124 heavy-duty, military-capable trucks there last summer.

According to press reports here, the special-platform trucks were exported to Iraq with the aid of senior managers, including Mercedes Chairman Werner Niefer.

Niefer already is under investigation by the Stuttgart prosecutor's office for possible income tax evasion. No charges have been filed, but police searched Niefer's office and home three weeks ago and confiscated documents related to the investigation.

Acting on what they said was a tip from an informant, Stuttgart police and investigators from the local prosecutor's office moved through the company's headquarters complex late Thursday questioning executives and removing documents related to the company's international sales.

Officials of the giant company moved quickly to dispute the latest allegations. At a hastily called press conference Friday, senior executives denied that the company had violated the arms embargo and charged that Niefer was the victim of a smear campaign from unidentified sources.

Helmut Werner, who as Mercedes' vice chairman heads the vehicle-maker's commercial-truck operations, said the company's last shipments to Iraq were made on July 17 and 19 last year and involved 124 trucks, 90 percent of which were for road use only.

But he said only 12 trucks reached Iraq, and that the remainder were returned to Europe.

Matthias Kleinert, a member of the board of Daimler-Benz AG, Mercedes' parent, said the allegations seemed to be part of a concerted effort to smear Niefer.

Niefer has denied wrongdoing, and said he expects the matter to be resolved quickly and without filing of formal charges. The Mercedes chief said he will not resign and company officials deny that his position is in jeopardy.

Niefer, 62, would normally retire upon the expiration of his contract at the end of 1993.

The tax investigation reportedly stems from the price the Mercedes chairman paid for his home, payment for improvements made to the estate and allegations of private travel on corporate aircraft.

According to German press reports, the investigation centers on Niefer's purchase of an estate in the exclusive Killesberg area of Stuttgart. Niefer rented the house in 1978 at a rate reputed to be below the market value, according to the German magazine *Die Stern*.

The landlord was Wolfgang Fahr, a representative of several German auto industry suppliers with ties to Mercedes.

Fahr reportedly sold the estate to Niefer in 1985 for less than the market value of the property. The difference between market value and sale price of the home is viewed by the Stuttgart prosecutor as potentially taxable, according to *Die Stern*.

The magazine also cites improvements made to the house that were allegedly paid by Mercedes-Benz.

Niefer has said the only improvements underwritten by the company were security-related.

Mercedes-Benz officials say Chairman Werner Niefer is the victim of a smear campaign from unidentified sources.

Honda streamlines top

Kawamoto will head new car division

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Honda Motor Co. late last week unveiled a sweeping management reorganization that does away with four geographic marketing groups and consolidates line responsibility for worldwide automotive operations in the hands of President Nobuhiko Kawamoto.

The measure, which peels away a layer of zone-oriented marketing management, consolidates responsibility along three basic product lines: cars, motorcycles and power products.

The simplification is meant to "speed-up our decision-making process and ability to respond to market changes," said a company spokesman here.

In his New Year message in January, Kawamoto voiced dissatisfaction with Honda's loss of nimbleness and vowed to take the company "back to basics to develop attractive products."

The automaker last year surrendered its third-place market share in the Japanese passenger-car market to Mitsubishi Motors Corp. It is known that the setback both angered and embarrassed Kawamoto, who was named to his post last June.

In his New Year address, Kawamoto conceded that Honda had lost touch with tastes in its home market while it focused on overseas operations, and that many younger Japanese had "abandoned" the automaker.

"The most important objective for Honda is to enhance our sales in Japan," he said.

Under the streamlining, Kawamoto will now serve as overall head of the automotive division, a post previously shared among the zone chiefs, in addition to continuing as president.

Reporting directly to him as passenger-car chief will be Executive Vice President Yoshihide Munehuni, put in charge of sales, and Executive Vice President Shoichiro Irimajiri, who will head product development.

Honda's North American auto operations will continue to report to Kawamoto through Koichi Amemiya, head of Honda North America Inc.

Chrysler ousts Bieber, axes five board seats

By Mary Connelly
and Colleen McDonald
AUTOMOTIVE NEWS STAFF REPORTERS

HIGHLAND PARK, Mich. — Chrysler Corp. will change the complexion of its board of directors in May by reducing it from 18 to 13 members and removing UAW President Owen Bieber as a director.

The company is billing the move as a cost-cutting measure, but the fallout is more far-reaching.

At Chrysler's annual meeting in May, Bieber and four other board members will not be renominated. Bieber's exit will end an era of unprecedented union representation that began in 1980, when Chrysler invited then UAW President Douglas Fraser to join its board.

Although Bieber opposes the board's decision, the UAW said it does not plan to ask Chrysler to reconsider the move, which was announced last week.

"It was a mistake to deny a labor voice on the board," Bieber said. "Chrysler is denying themselves, not the UAW workers."

Chrysler maintains the move will not reduce UAW input. "The UAW has access to the corporation and its management through myriad programs from the shop floor to the boardroom," a Chrysler spokesman said. "There wasn't a board seat designated for the UAW. They were invited on as individuals, like all other board members."

Other retiring directors are:

- Anthony J.A. Bryan, 68, chairman of Oceonics Group plc and a Chrysler board member since February 1977.
- Ronald H. Grierson, 69, vice chairman of General Electric Co. plc (Great Britain) and a Chrysler board member since November 1982.
- Juanita M. Kreps, 70, economist and educator and a Chrysler board member since September 1983. She was U.S. secretary of commerce from 1977 to 1979.
- J. Paul Sticht, 73, retired chairman of RJR Nabisco Inc. and a Chrysler board member since September 1981.

UAW members expressed disbelief and disappointment about Chrysler's decision to drop Bieber from its board. Some predicted the move will renew tensions; others said the it won't have much impact.

John Miller, president of UAW Local 412 in Warren, Mich., does not buy Chrysler's tying the board cuts to its cost-cutting effort. He said the ouster was a slap because the UAW helped Chrysler increase sales by increasing quality.

Chrysler's plan to downsize the board will better balance the number of inside and outside directors. Chrysler has only three inside directors: Chairman Lee Iacocca, President Robert A. Lutz and Vice Chairman Robert S. Miller Jr.

Four inside directors have left the board recently and have not been replaced. They are former Vice Chairman Gerald Greenwald, former Chrysler Motors Chairman Bennett Bidwell, former Chrysler Motors President Harold Sperlich and Allen E. Paulson, chairman of Gulfstream Aerospace, a former Chrysler subsidiary.

"It's a working balance they are going for," said Eugene E. Jennings, management professor emeritus at Michigan State University in East Lansing, Mich., and a consultant to chief executive officers and corporate

Hagen

Ford heir gains in reshuffling

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

William Clay Ford Jr., great-grandson of Ford Motor Co. founder Henry Ford, has been given added responsibilities with the reorganization of the automaker's Alpha group, an organization that was formed in 1986 to improve Ford's manufacturing processes.

William Ford's title has been upgraded to executive director from director of Business Strategy — Ford Automotive Group. He also will head a group that will look at ways to improve relationships with Japanese partners.

The reorganization of Alpha comes with the April 1 retirement of John A. Manoogian, who has been general manager of the group since 1986. On April 1, a new organization called Alpha Simultaneous Engineering will be formed, combining Alpha and Ford's former Product and Manufacturing Engineering Staff.

David F. Hagen will be the general manager of the new organization. Hagen had been general manager of Alpha's Engine Division.

Other appointments include:

- Robert H. Transou, executive director of Body Engineering, will succeed Hagen as general manager of the Engine Division.
- Kenneth R. Dabrowski, program manager of International and Small Car Programs, Car Product Development, replaces Transou.
- Paul W. Drenkow, who was director of the Asia-Pacific Operations — Dearborn office, is now executive director for Product and Business Strategy, Asia-Pacific Automotive Operations.

Despite war's end, early March sales declined 17.4%

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Car dealers had better keep their yellow ribbons up for a while in hopes that customers will come back.

Total sales of domestic and imported cars and trucks dropped 17.4 percent in the first 10 days of March, according to *Automotive News*. The decline, based on reported sales from some companies and estimated sales of others, is figured on a daily selling-rate basis.

February import sales, Page 35

There were eight selling days in the March 1-10 period this year and nine days last year.

The results debunked predictions that sales would improve once the Persian Gulf war ended. Many dealers reported that traffic picked up, but the traffic wasn't translated into sales, said Tom Webb, economist for the National Automobile Dealers Association.

"I was sort of surprised by the numbers," Webb said. "I had spoken to quite a few dealers, and they almost universally reported an increase in showroom traffic."

*Estimated †Breakdown of North American built and imported car sales not available.
There were 8 selling days in the period this year and 9 last year.

Accord, the best-selling car in 1989 and 1990, is trailing Cavalier and Taurus so far in 1991.

Ford F series has been truck sales king since 1976, but the Chevrolet C/K has outpaced it in 1991.

NEW LEADERS: *Chevrolet C/K and Cavalier pass F-series, Accord in sales race*

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The Honda Accord and the Ford F-series pickup, last year's leaders in car and total-vehicle sales, are playing catch up in the early months of 1991.

The Ford F series trailed the Chevrolet C/K pickup by 2,552 sales at the end of February. At the same time last year, the F series was ahead of the Chevrolet C/K by 8,046 units.

Chevrolet Cavalier and Ford Taurus have surged ahead of the Accord, which was the best-selling car nameplate in the United States in 1989 and 1990.

Last year, Honda led the sales race every month, usually trailed by Taurus and Cavalier.

But at the end of February, Cavalier was 997 units ahead of Accord. Taurus had sold 66 more cars than Accord by Feb. 28.

Michael Luckey, president of the Luckey Consulting Group in Creskill, N.J., says he believes Cavalier and Taurus sales have been buoyed by fleet purchases.

"What's really weak are individual purchases," Luckey says. "The weakness in Honda will begin to improve as the overall market improves."

Lee McMillan, a Northbrook, Ill., auto analyst, agrees: "Taurus is a very important fleet car, so it sticks out like a sore thumb. There's not so much going on at the retail level."

The Ford F series has been king much longer than the Accord. It has been the top-selling truck since 1976 and the best-selling vehicle since 1981.

The Chevrolet C/K has always played second-best to the F series, coming up short by 34,526 sales last year, but the Chevrolet truck outpaced its Ford rival in both January and February.

McMillan, president of Marksmen Management & Research, theorizes that the consumer rebates on the C/K may be more effective than the dealer rebates on the F series.

GM offers a $500 customer rebate on the C/K. Ford reimburses dealers $100 to $700 on F-series sales, depending on the number sold.

"The dealer incentives don't pack that much punch," McMillan says.

GM's incentive program expires April 7; Ford's expires April 10.

Ford still sells more trucks than Chevrolet, but Chevrolet continues to chip away at the lead.

Through Feb. 28, Ford had sold 162,935 trucks, 18,161 more than Chevrolet. At the same time last year, Ford led by 19,316 units.

Japanese win big in truck share

By Joseph Bohn
TRUCK EDITOR

Spurred by new trucks and a recessionary trend away from full-sized pickups and vans, Japanese manufacturers are making huge gains in light-truck market share in the United States.

The trend is expected to continue in 1991 as additional U.S. production capacity for Japanese trucks comes on stream.

During the first two months of this year, Japanese-based truck manufacturers captured 17.4 percent of the U.S. light-duty market, a big 3.5 percentage-point gain over January and February 1990.

They had 16.2 percent of the light-truck market for all of 1990, up 1.2 points from 1989.

The gains ended a brief period in which the U.S. Big 3 took truck share from the Japanese. In 1989, for instance, compact pickup sales dropped, and Japanese light-truck sales declined more than 81,000 units from 1988.

In January and February, Japanese light-truck sales dipped only 4.3 percent to 97,554. Big 3 light-truck sales plummeted 26.7 percent to 462,300 compared to the 1990 period.

The Japanese are benefiting chiefly from minivan sales.

They took 12.0 percent of the minivan market during the two months, compared to only 4.7 percent in the period in 1990.

The Toyota Previa minivan provided 7,449 sales during January and February, up from 1,279 a year ago when it was new to the market.

Mazda's MPV minivan provided 6,662 sales, up from 5,809 a year earlier.

Importers' share of the small pickup market was 39.9 percent during the same two months, up just 0.40 of a percentage point from a year ago.

And their share of the compact sport-utility segment dropped to 24.6 percent in January and February from 27.4 percent a year ago.

The small-truck segments have been growing, while full-sized segments, in which the Japanese have virtually no presence, are off.

Full-sized pickups took 23.3 percent of light-truck sales during the first two months of this year, down from 27.9 percent a year ago.

Similarly, full-sized vans' share dropped to 6.6 percent from 7.8 percent a year ago. And full-sized sport-utilities' share dropped to 1.3 percent from 1.9 percent.

To some degree, the importers' market gains are exaggerated by the recession, says analyst Wendy Needham of Smith Barney, Harris Upham & Co. of New York.

Needham says domestic manufacturers sell a higher percentage of business-related trucks than do importers, whose trucks are more geared to personal use. With added U.S. production capacity in the compact segments, the Japanese share is likely to continue to grow.

Toyota Motor Sales U.S.A. Inc., for example, has been short of compact pickups because it has to share production of that Japanese-built vehicle with other world markets.

New United Motor Manufacturing Inc., Toyota's joint venture with General Motors, is due to begin producing compact pickups this summer at a rate of 100,000 annually. That will give Toyota

Fleets are ray of sunshine in sales gloom

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Fleet orders from corporations and daily rental companies continue to buoy industry sales during a severe slump in retail sales.

Commercial fleets represent about 30 percent of the total U.S. market, according to industry estimates, although that may have risen in recent months as retail sales have faltered.

"Chrysler tells me they're keeping a van plant open just to handle commercial fleet business," said Jay Campbell, director of administrative operations for LMV Leasing, based in Pittsburgh.

"That has never happened before," she said. "The fleets have always been given some consideration by the manufacturers, but we've never had the clout to actually keep a plant open just to meet orders."

James Noonan, senior vice president of marketing for PHH FleetAmerica, a fleet-lease company based in Hunt Valley, Md., called fleet sales the "one ray of sunshine" in overall industry sales.

"Commercial fleet sales and sales to daily rental companies are really propping things up," said Noonan.

Though he said some companies are downsizing their fleets, orders to PHH FleetAmerica are running about the same as last year. But he said the company has felt some side effects from the recession.

"The fleet industry has always been rock-solid stable for the manufacturers," he said. "The normal trend in this industry has been toward growth and expansion, but orders are running at about the same level as last year, so there has been some impact from the recession."

Noonan said light-truck orders are up over last year, but that could be due to a migration to

AROUND THE WORLD

Europe's execs predict 4% sales dip for 1991

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — West European car sales fell for the seventh straight month in February amid industry projections that volume for all of 1991, excluding the former East Germany, will fall by 500,000 units, or nearly 4 percent.

Britain's Economist Intelligence Unit, a private research organization, polled the chief executives of Europe's six largest carmakers and reported last week that the leaders predict a decline of about 3.8 percent this year, to some 12.7 million units. But most of the executives expect a slight recovery in 1992.

The London-based research group itself projects a decline of 4.8 percent, to 12.6 million units, in 1991. The projection also excludes the former East Germany, where the organization foresees sales of 300,000 cars in 1991.

Meanwhile, February sales declined 3.5 percent in 17 West European countries, to 1,061,700 units, according to a combination of industry estimates and official registration figures compiled by *Automotive News*.

But without the buoyancy provided by continuing strong German sales, the decline would have been much steeper.

While the overall market continued to falter in February, German sales surged 44 percent from a year earlier, to 319,000 units.

Through the first two months of the year, German sales rose 50.1 percent, to 654,000. In stark contrast, Europe's next four biggest markets — Italy, France, the United Kingdom and Spain — declined for the first two months.

When German results are subtracted from the two-month sales totals, European sales plunged 15 percent in the first two months of this year.

According to the EIU survey, Germany will continue as the main exception to the overall trend this year. But the industry leaders do not expect the strength of the German market to compensate completely for sharp declines in several other key markets.

The research organization itself projects that German sales, excluding the former East Germany, will rise 1.9 percent, to 3.1 million units, during 1991. At the same time, it expects the French market to fall 9.5 percent, to 2.09 million units; Italy, 11.4 percent to 2.08 million; the United Kingdom, 7.9 percent to 1.85 million; and Spain, 7 percent to 920,000.

Volkswagen Group, General Motors and Ford Motor Co., all well-represented in the buoyant German market, showed sales gains during the first two months of 1991. Italy's Fiat Group and France's Peugeot S.A. and Renault S.A. all turned downward because of their heavy dependence on the declining Italian, French and Spanish markets.

Ford is compensating for the collapse of its biggest European market, the United Kingdom, with big gains in Germany. Ford's sales here rose 64 percent in February, to 34,100, and were up 76 percent, to 71,000, for the first two months. Gains by the new Escort and Fiesta led the way.

Japanese carmakers are having trouble keeping pace with German demand. After compiling a market share of 15.7 percent in Germany last year, their combined share during the first two months of 1991 fell to 11.2 percent, even though volume increased 17 percent, to 73,500.

Combined Japanese sales rose 1.5 percent, to 240,100 units, in all of Western Europe during January and February, equal to a 10.5 percent market share.

Among individual makers, Volvo Car AB and Saab Automobile AB continued to suffer the biggest declines in European sales.

You probably thought you'd never see a secure, profitable alternative to factory service contracts, either.

But here it is. It's the Platinum Protection service contract program developed by GE Capital, a leader in automotive financial products for more than 15 years. And it's one you can sell with confidence. After all, our name's on the line.

Priced lower than factory programs, Platinum Protection gives you the opportunity to sell a quality product to your customers and build profits for your dealership.

Designed to be flexible, Platinum Protection is available for every major make and model — new or used. It's a program that doesn't restrict you to using one manufacturer's replacement parts. And it doesn't prevent you from collecting full retail charges on your parts and normal labor rates.

O.K., O.K., so pigs can't really fly. But you *can* sell the service contracts that offer you security, profitability and flexibility. Call **1-800-828-1392** for a copy of our Platinum Protection brochure.

April 4 — Denver Auto Auction, Aurora, Colo.

April 9 — Southern California Auto Auction, Fontana, Calif.; Southern Auto Auction, East Windsor, Conn.; and Gulf States Auto Auction, Mesquite, Texas

April 10 — Greater Tampa Bay Auto Auction, Tampa, Fla.

April 11 — St. Louis Auto Auction, Bridgeton, Mo.; and Harrisonburg Auto Auction, Harrisonburg, Va.

April 16 — South Seattle Auto Auction, Kent, Wash.; Newburg Auto Auction, Newburgh, N.Y.; and Aptco Auto Auction, Taylor, Mich.

April 18 — Greater Chicago Auto Auction, Chicago

April 23 — South California Auto Auction, Fontana, Calif.; and Southern Auto Auction, East Windsor, Conn.

April 25 — Clanton's Auto Auction, Darlington, S.C.; Dallas Auto Auction, Grand Prairie, Texas; and Ohio Auto Auction, Grove City, Ohio

April 30 — Florida Auto Auction of Orlando, Ocoee, Fla.

Volkswagen of America

March 19 — Bay Cities Auto Auction, Hayward, Calif.

March 28 — Ohio Auto Auction, Columbus, Ohio

Volvo Cars North America

March 19 — American Auto Auction, Boston, Mass.

March 20 — Dealers Auto Auction of Dallas, Dallas; Riverside Auto Auction, Riverside, Calif.; and Atlanta Auto Auction, Atlanta

March 21 — Golden Gate Auto Auction, Fremont, Calif.

March 26 — Arena Auto Auction, Chicago

March 27 — Nashville Auto Auction, Nashville, Tenn.

AUCTION DIRECTORY

PENNSYLVANIA

Corry Auto Dealer Exchange, Route 6, P.O. Box 317, Corry, PA 16407. 814-664-7721. Every Thursday 12:30 sharp.

SOUTH CAROLINA

Rawls Auto Auction — Since 1938. Pickup, delivery unlimited. Recon facilities. Sale every Tues., 11 A.M. 803-657-5111 or fax, 803-657-5910, Leesville, South Carolina.

SOUTH CAROLINA

Clanton's Auto Auction, P.O. Box 51, Darlington, South Carolina, 803-393-2861. Sale every Thurs., Regular Consignment, 11 a.m. & Early Bird, 9 a.m. (repos & lease units).

TENNESSEE

A.D.E. of Memphis, 5400 Getwell, Memphis, Tenn. 38118. 901-365-6300. Every Tues., 10 AM; Regular Consignment & repo sale.

TEXAS

San Antonio Auto Auction (div. of GECAA), 1500 Ackerman Rd., San Antonio, Texas 78219. Sale every Weds. Contact: Frank Post or Michael Milikien, 512-661-4200.

TEXAS

Alamo Auto Auction, 2719 Fredericksburg, San Antonio 78201. 12:30 Thurs. Repos, lease, trades. Charlie, 512-736-6510. The South Texas independent auction.

VIRGINIA

Fredericksburg Auto Auction, 703-898-4900. 4907 Jefferson Davis Hwy, Fredericksburg, VA. Sale every Thurs. 9:30 am. Full service auction-fleet, lease & repos.

WISCONSIN

Metro Milwaukee Auto Auction. Sale every Wednesday. FMC, GMAC, all leasing. 414-835-4436, Caledonia, Wisconsin.

Canada's Feb. sales off 7.7%

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Canadian light-vehicle sales last month mimicked their performance in January, falling 7.70 percent below February 1990 levels.

Car and truck sales declined last month. In January, when sales in Canada dropped 7.41 percent, car sales had risen while truck sales dropped sharply.

In an unusual twist, Chrysler Canada sold more vehicles during the month than Ford of Canada. A year ago, Chrysler's car and truck sales lagged Ford's by more than 5,000 units. But last month, Chrysler sold 15,171 vehicles, compared with Ford's 14,131.

Chrysler was the only Big 3 company to report increases over February 1990 levels. Its car sales were up 7.13 percent and truck sales rose 19.86 percent.

Apparently, Canadian buyers have been unfazed by reported transmission problems on Chrysler's minivans. The company sold 3,687 Caravans and Voyagers during the month, up from 2,030 in the year-ago period.

There were no incentives on the minivans.

Ford's total sales were off 24.19 percent, and GM's were down 16.22 percent. The companies blamed the decline on the softness of the market, uncertainty over the economy and high interest rates.

BMW, Nissan, Subaru, Toyota, Volkswagen and Volvo were among import brands that increased sales by at least 10 percent. Decliners included Hyundai, Jaguar, and Mercedes-Benz.

Total car sales were off 4.07 percent, with sales of North American-built models dropping 6.91 percent from February 1990 and imported models declining 1.63 percent. Total truck sales were down 15.28 percent from February 1990.

That breaks down into a 16.39 percent slide in North American-built trucks and a 9.93 percent dip in imports.

Staff Correspondent Alex Law in Toronto contributed to this report.

DEALERS

FROM PAGE 1

finiti and Mitsubishi. Lexus and Infiniti were new to the list; Mazda dropped out of the Top 10 in car sales per outlet.

Ford and Chevrolet were the only Big 3 makes in the Top 10 in either category. Ford ranked fourth in combined car and truck sales per store and ninth in cars alone. Chevrolet was fifth in cars-trucks and 10th in cars.

The sales per outlet averages are in no way an indicator of sales volume. In 1990, Ford Division sold 20 times as many cars as Lexus, but Ford had nearly 40 times as many dealers as Lexus. As a result, Lexus averaged 608 car sales per franchise; Ford averaged 294.

> The rankings of Acura, Lexus and Infiniti indicate that Honda, Toyota and Nissan had a better idea when they decided to invade the U.S. luxury car field.

On a year-to-year basis, an increase in sales may be offset by an increase in the number of dealers. And a sales decline can result in a huge loss in the per-franchise average if the dealer total rises.

Hyundai is an example. Its sales fell 25 percent in 1990, but its dealer count rose 31 percent. As a result, Hyundai's sales per outlet plunged to 368 from 610 in 1989.

Hyundai is still in the Top 10 in sales per franchise, but its average is a far cry from the 1,431 it posted in 1986, its first year on the U.S. market. That was the highest average ever recorded by any make sold in the United States.

The rankings of Acura, Lexus and Infiniti indicate that Honda, Toyota and Nissan had a better idea when they decided to invade the U.S. luxury car field. Acura has been on the market five years; Lexus and Infiniti arrived late in 1989.

The only newcomer in the 1990 rankings was Saturn, which averaged 43 car sales per franchise.

Sixteen of the 47 makes listed in the *Automotive News* car-truck analysis averaged more sales per franchise in 1990 than in 1989, and 15 of them were imports. Lincoln, up 19, was the only gainer among the Big 3. Honda (65) and Toyota (30) had the largest increases among the makes that were on the market for the entire year in both 1989 and 1990. Mercedes-Benz was up 10 sales per franchise; the others climbed seven or less.

Lexus and Infiniti recorded huge increases in 1990, but they were on the market for only a few months in 1989.

On the car side, 15 makes registered increases: Lincoln, Chevrolet and 13 imports. Honda again led the gainers.

Chevrolet's increase points out the value of a strong captive line. U.S.-built and imported Geo models brought Chevrolet dealers an average of 61 car sales per franchise. No other captive import contributed more than 17 sales to the average of its parent make. The Geo total was up 18 sales per franchise over 1989, more than half of Chevrolet's gain of 31 new-car sales per franchise.

Hyundai's plunge of 242 sales per franchise was the stiffest of the 28 makes that declined last year. Thirteen Big 3 makes and 15 imports lost ground. Following Hyundai in the down column were Nissan, 59; Suzuki, 56; Dodge, 50; Jeep, 40; Ford, 39; Mitsubishi, 37; Subaru, 30; Volvo, 29; and Mercury, 29.

At Ford, trucks passed cars last year in share of sales per dealership. Ford's average of 600 deliveries consisted of 306 trucks (51 percent) and 294 cars (49 percent). In 1989, it was 52 to 48 percent for trucks. Trucks had an advantage of 56 to 44 percent at Dodge, but cars had a 52 to 48 percent edge in Chevrolet sales per dealership.

Cars dominated the sales per outlet averages for the major Japanese players. Toyota, Nissan, Mazda and Mitsubishi gleaned 65 to 78 percent of their sales from cars. It was a different story at Isuzu, where sales were 95 percent trucks, and Suzuki, where trucks had 68 percent of the pie.

Bankers say makers want shorter leases to boost sales

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Manufacturers are promoting shorter leases to bring lease customers back for a new car sooner, according to a Consumer Bankers Association survey.

Shorter leases also help reduce the likelihood of delinquencies and repossessions, and shorter terms make it easier to predict residual values more accurately.

The early results of the association's survey, based on data from 71 lenders, showed the average lease term fell to 45 months in 1990, after growing from 49 months in 1988 to 51 months in 1989. Meanwhile, the capital cost of the average lease grew 18.6 percent from 1989 to $21,438 last year, the association said. Capital cost is the amount the bank is financing; in effect, the price of the car.

But a comparison between 1990 and 1989 showed that more lessees fell behind in their payments, terminated their leases early, or had their cars repossessed in 1990 than in 1989.

Lease repossessions doubled from 1989 to 1990, representing 1.52 percent of outstanding lease dollars in 1990, compared with 0.75 percent in 1989.

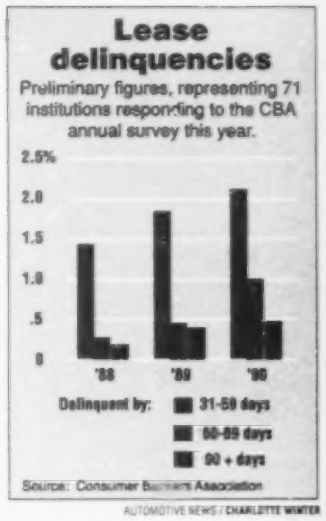
At the same time, a higher percentage of leases were delinquent. In 1989, leases representing 1.84 percent of all lease dollars were 31 to 59 days delinquent. That figure reached 2.12 percent in 1990, the association said.

The association's full survey won't be published until May, after more responses are received. Last year, 135 lenders participated in the survey.

The association is holding its annual auto finance convention in Boston this week. According to Randall McCathren, executive vice president of Bank Lease Consultants in Nashville, Tenn., consumer leasing grew from 12.4 percent of all consumer vehicle sales in 1988 to 15.35 percent in 1989. A "slight" increase is expected when final 1990 figures are tallied, McCathren said.

Last week, McCathren said he disagreed with some of the Consumer Bankers Association's statistics. He said the survey gives too much weight to smaller banks and not enough to the giants in auto financing, like Chase Manhattan.

But he agreed that manufacturers and their captive financing arms are promoting shorter leases — with such success that McCathren felt banks have a tough time competing with automakers' captive finance companies for short-term leases.



AUTOMOTIVE NEWS / CHARLOTTE WINTER

FLEET SALES

FROM PAGE 6

trucks from cars by some companies.

Dennis LaLiberty, vice president of marketing for Wheels Inc., based in Des Plaines, Ill., said there has been no shrinkage in fleet orders or in the size of company fleets.

"Fleet sales are far more stable than retail sales because companies aren't likely to cut back their sales and service force even in a weakened economy. These are the people who get the company cars," he said.

Orders from daily rental companies have also helped buoy industry sales and have provided dealers who have strong fleet departments with a cushion from the recession.

"Our fleet sales are up 20 percent over last year," said James Hoffer, general manager of Jordan Motors Inc. in Mishawaka, Ind.

Hoffer said daily rental agencies and companies with commercial fleets must replace their vehicles after a certain number of miles.

"Fleet sales are much stronger than my retail sales," said Hoffer. "We are a strong force in the fleet business. A major portion of our business comes from fleet sales."

John Outland, vice president and controller of Luke Potter Dodge Inc. in Winter Park, Fla., said fleet sales are running about the same as last year while retail sales are down. "Retail sales rise and fall, but fleet sales are steady," he said.

Elvin Pool, general sales manager of McInerney Ford Inc. in Orlando, Fla., characterized fleet sales as very strong. He even received a surprise order of 50 cars last week from a daily rental customer. "Fleet sales never did slow down," he said.

Pool also said the dealership's retail sales are picking up steam. "We had one heck of a February; at least we didn't lose any money," he said. "March is going crazy, so we have doubled our advertising budget to capture more of a market share."

Frank Halvorson, general manager at Prospect Motors Inc. in Jackson, Calif., said fleet sales through February were 9,854 vehicles, down from about 11,500 for the same period last year.

But he said General Motors billed some vehicles late in the 1990 calendar year, so some deliveries that should have been included in the January sales numbers were rolled into December sales.

He expects Prospect to deliver more than 100,000 GM and Chrysler vehicles to fleet accounts this year, compared to about 96,000 in 1990.

SALES

Luxury tax has cost 4 makers $450 million, lobby says

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Jaguar, Porsche, BMW and Mercedes-Benz lost hundreds of millions of dollars worth of retail sales during January and February because of the new U.S. luxury tax, according to a group fighting to repeal the measure.

The Federation Against Inequitable and Regressive Taxation (FAIRTAX) estimates that sales of vehicles over $30,000 sold by the four importers fell 49 percent from last year in January and February.

Their sales totaled 9,435 during the first two months, compared with 18,475 during the same period a year ago.

The figures include only those models that sold for more than the $30,000 tax threshold, said Robert McElwaine, executive director of FAIRTAX.

They also exclude deliveries of cars that were ordered early enough to avoid the tax, he said.

McElwaine, the former head of the American International Automobile Dealers Association, said makers lost $450 million in retail sales during January and February. At that rate, they could realize an annualized loss of about $2.7 billion.

But his figures do not take into account the fact that luxury brands have not been the only ones to suffer this year. The entire U.S. car and truck market is off 21 percent.

The figures also do not reflect the sales increases enjoyed by each of the four companies last December when buyers were trying to beat the luxury tax.

McElwaine said Jaguar has been the hardest hit in 1991, with a sales decline of 64 percent from1990. Porsche sales declined 60 percent; BMW, 48 percent; and Mercedes-Benz, 42 percent.

He calculated the decreases from proprietary numbers provided by the manufacturers, which showed exactly how many sales were subject to the luxury tax. Consequently, they are different from *Automotive News*' numbers in the accompanying Import Sales by Model table.

FAIRTAX also includes the boat, jewelry and fur industries.

The group anticipates that legislation to repeal the automotive luxury tax will be introduced this spring. Last week, a bill to repeal the tax on boats that cost more than $10,000 was introduced in the Senate. Sponsors of the auto bill are waiting "for the appropriate time," McElwaine said.

McElwaine said that dealers are especially concerned that their demonstrator models that cost more than $30,000 also are affected by the tax.

The Treasury Department requires that a dealer pay the luxury tax, which is 10 percent of the amount of the transaction price above $30,000, as soon as the car has been used for 200 miles of personal driving.

"This ruling has forced dealers to restrict the use of demonstrators, resulting in the loss of valued sales personnel and further reducing sales," McElwaine said.

Luxury tax again clobbers sales of pricey import lines

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Luxury import cars took another big sales hit in February, the second month of the new U.S. luxury tax.

The levy, which took effect Jan. 1, has added 10 percent to the amount of the transaction price over $30,000. Models affected by the tax generally benefited from beat-the-tax buying late last year. But this year has been different.

Last month, BMW was down 18.19 percent; Mercedes-Benz, 31.49 percent; Audi, 38.06 percent; Porsche, 55.59 percent; and Jaguar, 61.49 percent. Those makes also suffered steep drops in January.

Lexus LS400 was down 4.67 percent, but Infiniti Q45 was up 51.62 percent.

Overall domestic and import car sales were down 13.65 percent in February. Imported models alone fell 20.83 percent for the month and were off 25.89 percent for the year.

A model-by-model appraisal reveals how company flagships have suffered. Mercedes-Benz's 190 models carry little, if any, luxury tax. February sales were up 14.12 percent. But more expensive Mercedes lines were off 44 to 80 percent.

BMW's 3 series, which starts well below the luxury tax threshold, dropped only 1.72 percent. The 7 series, which carries a luxury tax of at least $2,000, fell 49.11 percent.

MARKET SHARES
Domestic, Import cars

	Feb Sales	Pct. of Total
Subcompact	145,495	23.39
Compact	131,891	21.21
Intermediate	214,363	34.48
Standard	44,860	7.21
Specialty	11,523	1.85
Luxury	73,721	11.86
TOTAL	**621,853**	**100.00**

Few models outperformed their year-ago totals. February's gainers included the Acura Legend, Isuzu Impulse, Lexus ES250, Mitsubishi Galant, Nissan Stanza, Saab 900S, Toyota Cressida and Volkswagen Corrado.

For the most part, entry-level cars also failed to buck the month's downward trend.

Daihatsu fell 58.62 percent, hurt by the fact that it had only 1990 models to offer and even those were in short supply. Production delays meant that Daihatsu dealers are only just now getting their 1991 shipments.

Hyundai sales fell 16.48 percent, and the Excel, once a darling of the entry-level prospect, fell 39.29 percent. Sales of the new Scoupe totaled 1,994 units.

10 DAYS

FROM PAGE 6

and light trucks dropped to 202,299, down 24.8 percent from 269,011 a year ago.

Domestic cars declined 21.9 percentto 129,978. And trucks fell to 72,321 in early March, off 29.5 percent from last year.

On the import side, car sales were down 34.4 percent at 33,569, and trucks were off 31.7 percent at 10,325.

Total sales for General Motors lines fell 27.5 percent to 90,589. GM's cars were off 26.7 percent. Its trucks were down 28.9 percent.

Compared to the rest of the market, Buick continued to shine in early March. Its sales were down only 0.6 percent to 11,651, despite the shorter selling period.

Ford Motor Co. sales fell 27.5 percent to 63,024. Its Ford, Lincoln and Mercury makes were down 21 to 29 percent.

Automotive News estimates that Chrysler Corp. sales were down 23.3 percent, to 31,943, split about evenly between cars and trucks. Chrysler refuses to report 10-day sales.

Toyota Motor Sales U.S.A. Inc., which reports both domestic and import sales on a 10-day basis, said its Toyota-brand cars were off 31.9 percent.

Toyota trucks dropped 24.3 percent, and Lexus luxury cars were down 15.9 percent.

Sales of Honda's U.S.-built cars were up 4.8 percent to 9,344 in early March.

Honda imports fell an estimated 15.5 percent, leaving the division's total sales off 2.9 percent.

Stung by a 22.2 percent sales decline for its U.S. built cars last month, Honda hiked its dealer incentives from $300 to $500 on 1990 and 1991 Accords and added another $400 on Accords ordered by April 2.

Poling is latest to plead for cost cuts from suppliers

By Al Fleming
INDUSTRY EDITOR

Ford Motor Co. wants suppliers to help make up the huge costs of selling its cars and trucks in America. Today, Ford is meeting in Dearborn with 145 chief executive and chief operating officers of supplier companies. This time, the suppliers will hear from Ford Chairman Harold Poling.

So far, both Ford and General Motors have had only limited success in getting suppliers to agree to up-front price cuts.

Ford's pitch is that economic and market conditions have deteriorated beyond expectations. Meanwhile, stricter clean-air requirements and passive restraints are adding hundreds of dollars of costs to Ford vehicles between now and 1995, and competition from the Japanese is intensifying.

Unless Ford significantly improves its cost structure, Poling will tell suppliers, the company may be unable to afford new vehicle programs.

In a letter to suppliers last November, A.F. Spencer, executive director of purchasing for Ford North American Automotive Operations, said Ford's marketing costs have soared to more than 11 percent of company revenue, or about $1,400 per vehicle. He asked Ford suppliers to cut prices by 1 percent by Jan. 1.

On Jan. 10, General Motors dropped the other shoe. In a letter to suppliers, Donald A. Pais, vice president of GM's materials management staff, asked suppliers to embark on "a very aggressive effort to reduce costs." Within two weeks, GM purchasing people were seeing suppliers face to face and asking for price reductions of 3 percent this year.

Not surprisingly, supplier reaction to the Big 2 solicitations has been underwhelming. The top officer of a major component-manufacturing firm said that neither his company nor any other major supplier he knows of is able to give the automakers "up-front price cuts."

CHRYSLER

FROM PAGE 2

boards. "You have to have board balance. It also creates a smaller board for quicker action and more responsiveness."

Ford Motor Co.'s board comprises seven inside directors, nine outside directors and Ford family heir William C. Ford.

General Motors has 14 outside directors and five inside directors. Retired Chairman Roger B. Smith also serves as a director.

Chrysler pays each director $35,000 to $40,000 annually, depending on committee assignments and meeting attendance, a company spokesman said. Retired directors will continue to receive a $20,000 annual fee, two cars annually plus the option to lease two more cars annually.

Bieber has been donating his pay to Grand Valley State University in Allendale, Mich.

Chrysler's largest shareholder, Hollywood billionaire Kirk Kerkorian, was not contacted prior to Chrysler's decision, according to a Chrysler spokesman.

A spokesman for Tracinda Corp., Kerkorian's investment company, declined comment.

GM CANADA

FROM PAGE 1

Canada as Passport's Impulse. The U.S. Geo Metro is sold as the Chevrolet Sprint and Pontiac Firefly in Canada.

"We're looking at all the products of North America," Erdman said. "If you ask would I consider merchandising Geo in Canada — yeah, I'd consider that."

But he would not elaborate. Passport is now carried by 71 dealers and is separate from GM of Canada's other dealerships.

In Erdman's view, the dealer organization will likely stay as a third channel for GM products, but he would not indicate what products it might handle or what the name or organizational structure might be.

As for Saturn, Erdman gave the first indication that the company might stray from its decision to have Passport be the exclusive carrier. "We've made the decision to give the Passport dealers the first opportunity to market Saturn, and I guess I'd like to leave it at that," Erdman said.

The product "rationalization," as Erdman calls it, is necessary to position the company for a smooth entry into the price parity with the United States that the Canada-U.S. free-trade agreement will bring about on Jan. 1, 1994.

Essentially, the agreement will make car prices in Canada comparable to those in the United States and allow new-car buyers to shop for cars over the border. That is especially important to the Canadian domestic operations, since Canadians have historically paid more than Americans for domestic cars in many segments.

Erdman said that to prepare GM of Canada for the mid-1990s and beyond, "the entire lineup of the way cars are being marketed and sold is under review." He said the review group is "looking at all the pieces of the marketplace — all the cars, all the trucks, how we've got them set up, what are the price points, what are the model mixes, what are the franchises."

GM of Canada's differences with the U.S. operation go beyond Passport and Geo. Canadian dealers don't carry all the products sold in the United States, and some appear under different names. The Chevrolet Corsica is also sold as the Pontiac Tempest. The Pontiac LeMans in the United States is sold through Passport as the Optima. In addition, Passport sells some Isuzu products, such as the Trooper and Rodeo, that GM does not handle in the United States.

On March 1, Mike Johnston, director of the Passport Division, was transferred to GM's Truck Operations. His duties, "for the time being," are being handled by Bob Simpson.

PROGRAM

FROM PAGE 1

that prices on program vehicles were soft last fall but have been stronger in recent months.

Robert L. Rewey, Ford vice president for sales operations, declined to comment except to say that "Ford is not in business to lose money," and that auction prices were not a primary consideration in lengthening the rental car cycles.

The National Automobile Dealers Association lauded Ford's move. "This is a sound business decision that will help reduce the glut of nearly new cars, which has helped depress new-car sales in the first quarter of 1991," said Frank R. Anderson Jr., NADA president.

Called "program" cars, the vehicles are sold to daily rental companies and then repurchased by the automakers at a guaranteed depreciation rate and redistributed to dealers through auto auctions. Some industry estimates put the number of program cars by all domestic and foreign manufacturers at about 1.2 million.

Rewey declined to say how many program cars Ford expects to sell in the 1991 model year or how lengthening the cycle will affect volume. But there should be fewer program cars available to dealers.

He said the lengthened cycle will probably continue into the 1992 model year.

Program cars have helped dealers stay profitable, especially in lean times, because grosses are greater than on new cars.

Still, dealers complained that potential buyers of new cars often are swayed into buying program vehicles because prices are substantially lower. In some cases, the price difference between two same-year models is $5,000.

Program cars are clean and low-mileage; many 1991 program cars have fewer than 3,000 miles on them when they are returned to the auctions by the rental companies.

Substitution of those nearly new cars for new cars by buyers can run as high as 40 percent, according to some industry estimates.

Ford is expected to send an estimated 400,000 vehicles to the auctions in 1991, up from 350,000 in 1990. General Motors dispatches about 600,000 vehicles to the auctions. Most are program cars.

Last year, Ford and General Motors announced that they would repurchase 100 percent of their program cars from daily rental companies at the behest of dealers.

Automakers had repurchased about 75 percent of of the program cars sold to daily rental companies. Rental agencies sold the remainder on used-car lots in competition with franchised dealers.

Ford adds consumer incentives in Canada

OAKVILLE, Ontario — Consumer incentives have been announced by Ford Motor Co. of Canada Ltd.

The program, which has no expiration date, offers buyers a choice of 8.9 percent financing for up to 48 months or cash rebates ranging from $500 to $1,000.

The program features $1,900 cash paybacks on 1991 F-series pickup and Aerostar, and 1990 Tempo, Topaz, Mustang and Probe; $750 on 1991 Tempo and Topaz, 1990 and 1991 Taurus, Sable, Thunderbird, Cougar and Ranger, and 1990 Bronco II; and $500 on 1991 Mustang and Probe and 1990 and 1991 Festiva, Escort and Tracer.

OBITUARIES

Robert J. Ferri

SPRINGFIELD, Mass. — Robert J. Ferri, founder and president of State Chrysler-Plymouth in Springfield, Mass., died March 5. He was 65.

Thomas R. Garvey

HINGHAM, Mass. — Thomas R. Garvey, president of Garvey Oldsmobile in Norwell, Mass., died Feb. 23. He was 75.

Thomas A. Mooney

CHICAGO — Thomas A. Mooney, retired senior vice president of CR Industries in Elgin, Ill., died Feb. 19. He was 61. The company is an automotive sealant supplier.

Richard W. Toplin

MANCHESTER, N.H. — Richard W. Toplin, owner of Franklin Ford and Tilton Chrysler-Plymouth on the Franklin/Tilton border in New Hampshire, died of cancer March 2. He was 47.

PORSCHE

FROM PAGE 3

the program itself is fine. But what they really need are sales incentives for carryover models and floorplanning assistance.

"The way Porsche builds cars and ships cars, you can't be sure you'll have cars when you need them," Burton added. "So you take them whenever they arrive and sometimes end up flooring them for months before sales pick up."

Porsche sales were down 60.3 percent from 1990 for the first two months of this year. Dealers complain that they are loaded with 1990 product that they can't sell.

According to Porsche, inventories are not out of whack, considering industry sluggishness. *Automotive News* calculates Porsche's days' supply at 161 on March 1, compared with 87 a year ago.

Brian Bowler, president of Porsche Cars North America, calls the program's demands on its dealers "genteel." He said that by giving dealers an opportunity to earn some extra money with relatively little effort, the program is itself a form of financial aid.

He said the financing problem is not unique to Porsche. All dealers are under pressure because banks are getting out of auto financing, he said, and Porsche doesn't have its own captive finance company.

Bowler said Porsche is looking for creative ways to "put money into their pockets."

Jeff Barnaby, general manager at Zipper Porsche Audi in Beverly Hills, Calif., agreed with other dealers that he could use some more direct financial assistance, but he said the program is better than nothing.

Bowler said the program should eventually result in increased sales, and that's the real way to turn around dealers' fortunes.

An example of how Bowler hopes to change relates to signage. He said many dealers are using "outdated and confusing" Porsche/Audi signs left over from the days when Porsche was distributed by Audi's U.S. importer, Volkswagen of America Inc.

The program sets criteria for sales, service and parts operations. It is tiered to allow dealers to increase their participation over a three-year period, or drop out. Dealers can make some of the easiest, and least costly, changes first, but they are expected to meet the more stringent criteria before the three years are up.

For example, a dealer may immediately implement the sales-prospect tracking system and technician certification program. For most dealers, that would be relatively easy and inexpensive.

On the other hand, the program requires each dealer to have a "quality showroom area" that uses interior design elements designated by the company and is large enough to house two Porsches. For some dealers, it could mean having to build additional showroom space or remodel completely.

Said Burton, "I disagree with their facility requirements. I think they put too much emphasis on showroom. They approach their problems like they're the most profitable franchise around, and many dealers aren't making any money with Porsche."

Millionth car trails 1990

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. automakers assembled their one-millionth car of the year last Monday, three days behind 1990.

Year-to-date, 1,095,601 cars have been produced, 6.17 percent below the 1,167,689 that had been built last year at this time.

Last week's estimated production was 104,860 cars, 3.76 percent above the previous week, but 22.74 percent below the year-ago week.

So far this year, U.S. truck production is estimated at 561,149, which is 27.36 percent behind last year's 772,519.

Scheduled truck production last week was 40,457, down 39.71 percent from the prior week and 52.43 percent below the 1990 week.

General Motors scheduled Saturday overtime last week at the A plant in Lansing, Mich.; the car line of the Lordstown, Ohio, facility; and the postal line at the Moraine, Ohio, truck plant.

GM's plant in Lake Orion, Mich., will operate on a one-shift basis until March 25.

Ford Motor Co. scheduled daily overtime last week at the Louisville, Ky., truck plant, which assembles the Ford Explorer.

The company's Lorain, Ohio, car line will be idle this week.

CANADA: Scheduled light-vehicle production in Canada last week totaled 33,786 units, 7.59 percent below the prior week and 27.90 percent below the year-ago week.

Year-to-date light-vehicle production estimated at 340,394, down 14.40 percent from last year at this time.

LATAIF RETURNS

Opinions differ on new U.S. role of Ford's mid-1980s sales Wunderkind

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The latest round of executive shuffling has created a sense of *deja vu* at Ford Motor Co.

In 1981, the company's market share had slipped to 20.6 percent, the third consecutive year that Ford's share had tumbled. A year earlier, Harold Poling, then executive vice president for North American Automotive Operations, had announced a $1.5 billion cost-cutting program that included 15,000 job terminations, 6,100 among the white-collar ranks.

"It was the most terrible time at Ford," said a 24-year Ford veteran. "The only bright spot may have been Lou" Lataif.

Lataif, then 42, was named a company vice president and general manager of Ford Division in March 1981 after holding various sales and marketing jobs since joining Ford in 1964.

Now, a decade later, Ford again is facing tough times.

Sales are off and the company's market share slipped last year.

Poling, now chairman, has announced another $1.5 billion cost-cutting program. Salaried workers fear layoffs.

Ford needs to sell cars.

Lataif, now a seasoned 52-year-old executive, has been summoned back to Dearborn after three years as president of Ford of Europe Inc. He will fill a newly established post of vice president for quality and marketing.

In a prepared statement, Poling said, "A primary mission for Mr. Lataif's position will be to lead an intensified worldwide focus to achieve a strategic competitive advantage for the company through total customer satisfaction with Ford products and services."

The marketing and corporate

Dealership dream ruined; bank sues Palmer friend

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

James O'Neal Jr., president of APAG Holdings Inc., said he would build an automotive Goliath comprising 82 franchises with sales of $2 billion by the end of 1991. Under the aegis of the Arnold Palmer Automotive Group, he boasted APAG Holdings Inc. would be the "Saks Fifth Avenue or Nieman-Marcus" of the auto dealership community.

That plan never materialized.

Today, O'Neal and his APAG Holdings are mired in a lawsuit with Sun Bank for defaulting on loans for what appears to be the only dealership APAG Holdings ever acquired, Braun Cadillac in Orlando, Fla. Last December, O'Neal was removed from the dealership's management when it fell into receivership.

Moreover, the Arnold Palmer Automotive Group is distancing itself from O'Neal, who was admitted to a Florida hospital for stress-related illness. O'Neal's hospitalization is slowing progress on Sun Bank's lawsuit.

It was a hectic two-year ride for O'Neal, a former banker from Indiana, who said he was organizing a network of nationally recognized retail dealerships under APAG Holdings.

The network was to include the Coggin-O'Steen chain of dealerships in Florida and Kentucky; the Don Massey group of dealerships in Michigan and Colorado; and perhaps even Arnold Palmer's dealerships.

O'Neal claimed to have raised $250 million from a privately placed stock offering through Bankers Trust in New York. That was to have been followed by a public stock offering. But O'Neal also sought capital from GE Capital Corp. and elsewhere, said Luther Coggin.

A longtime friend of the celebrity golfer, O'Neal was president of numerous Palmer dealerships and businesses. They traveled together extensively, including a visit to China. O'Neal recalls the China

Mitsubishi 5-year plan treads the high road

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Mitsubishi Motors Corp. is flying these days. That's the way President Hirokazu Nakamura sees it. He calls the company's five-year plan for the future the "F-Campaign."

That's "F" for Flight.

Previous campaigns were called "J" or "Jump" campaigns. "But when you jump, eventually you drop," says the 65-year-old Nakamura, explaining the change. "When you fly, you can just go higher."

Nakamura has sky-high plans.

Indeed, by almost any measure, Nakamura has sky-high plans for Mitsubishi:

- A 30 percent increase in sales, to 3 trillion yen (about $22.2 billion) by 1995, with a doubling of pretax profit, to 100 billion yen.
- A 10 percent share of the Japanese market, up from the current 7.5 percent.
- Overseas production of 800,000 units, including 240,000 capacity in the United States, up from 190,000.
- European production of 100,000 units.

The plans are ambitious, but Mitsubishi is exhibiting strong signs of growth. The Japanese auto industry is expected to show a 5 percent increase in sales for the fiscal year ending March 31, Nakamura says. But Mitsubishi sales will be up 10 percent, to 750,000 units, he says.

While sales tumbled for just about every other maker in the U.S. market during the Persian Gulf war — including venerable rival Honda Motor Co. — Mitsubishi sales rose 68.9 percent to 22,889 cars and trucks in February.

AUTOMOTIVE NEWS / DAVID L. BURHANS

Mitsubishi is building momentum with a string of new models that have been winning awards in the United States and Japan, particularly the 3000GT, also sold as the Dodge Stealth, and the Diamante, which has blitzed the luxury market in Japan and gained a reputation in the United States, even before its May introduction.

Nakamura readily admits that Mitsubishi is not starting its up-

Chrysler expands market with low-priced minivan

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. Chairman Lee Iacocca is driving his minivan to the heart of the U.S. auto market with a lower-priced value version of the Dodge Caravan and Plymouth Voyager.

Chrysler's plan to add incremental sales at the bottom end of the minivan segment is a new strategy in the company's continuing effort to dominate the market it created in 1983. Retail price of the seven-passenger value van is $14,208; the five-passenger version is $13,811. Those contrast with the current average retail price of $17,500 for a Caravan or Voyager, Chrysler said.

Dealer orders are strong for the value van, said James R. Julow,

see MINIVANS, page 41

LOW-END MINIVANS

Table compares manufacturer's suggested retail price for each basic 5-passenger minivan plus automatic transmission and air conditioning. They have 4-cylinder engines unless otherwise noted.

Value Caravan/Voyager*	$13,811
Regular Caravan/Voyager*	14,123
Ford Aerostar (V-6)	14,645
Chevrolet Lumina (V-6)	15,535
Mazda MPV	15,564
VW Vanagon	16,535
Toyota Previa	16,568

*The value version of Dodge Caravan/Plymouth Voyager has more equipment than the regular version.

Shaky auto loans rattle bankers:
Caught between turmoil in their own industry and the auto industry's slump, bankers are looking at ways to keep writing a large share of loans for new cars. Story on Page 2.

Washington boosts alternative fuels, bruises Bryan bill

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Alternative fuels got a big push on Capitol Hill last week while the prospects dimmed for Sen. Richard Bryan's corporate average fuel economy bill.

The Nevada Democrat suffered a setback despite the fact that his bill cleared its first legislative hurdle. Key supporters have begun to waver, and two Cabinet members said they would recommend a veto if Congress passes the bill.

Their reasons: Vehicles would have to be lighter, and thus would be less safe, if they had to meet Bryan's goal of a 20 percent gain in CAFE by the 1996 model year and 40 percent by 2001.

Bryan himself said his bill faces some tall hurdles as it heads towards the full Senate.

"It's going to be very tough going," he said before addressing the Automotive Press Association in Detroit on Friday. The auto industry has mobilized a very effective "phalanx" of lobbyists, he said. And while Bryan said it was premature to talk about a compromise, he seemed prepared to claim partial victory in helping make energy a public policy issue again.

The Cabinet members' linking of safety and fuel economy demonstrated again how automotive issues have become intertwined as Washington debates how to reduce energy use and make cars and trucks safer. And there was a lot of debate and action last week as Congress hurried to finish work before taking a two-week Easter break.

Specifically:

- The federal government announced a new rule mandating passive restraints on light trucks.
- Debate on President Bush's National Energy Strategy and one comprehensive energy bill continued in the Senate, while another, tougher energy bill was introduced by Sen. Timothy Wirth, D-Colo. To counter, House Republicans entered the energy debate with their own bill, much like the Bush bill and conspicuously void of CAFE recommendations.
- Legislation mandating the sale of alternative fuels and giving tax credits for vehicles converted to run on clean fuels was introduced in both houses.
- Bills earmarking $50 million for electric car research were introduced in both houses of Congress.
- Hearings began on another Bryan bill, which would mandate air bags in passenger cars and light-duty trucks.

On the CAFE front

Early in the week, the Senate Commerce Committee voted 14-5 to approve Bryan's CAFE bill.

But by week's end, more of the bill's 35 sponsors were expressing doubts about its feasibility. And Transportation Secretary Samuel K. Skinner and Energy Secretary James D. Watkins said the administration "strongly opposed" the bill and would recommend a presidential veto.

Wirth, who had been an outspoken supporter of the bill, said he now thought it "was too ambitious." But he still included

Mercedes-Benz stands behind Niefer, but whispers of resignation are loud

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

Other German automakers are not gloating over Niefer's troubles.

FRANKFURT, Germany — At a time when Mercedes-Benz AG expected to be basking in the glow of the new S class, the company's flagship automobile is being overshadowed by personal problems surrounding its chairman.

The growing debate in Germany is over whether Werner Niefer, who as Daimler-Benz AG's No. 2 executive oversees all Mercedes car and truck operations, should resign.

Acting on anonymous tips about military-related exports to Iraq, German authorities earlier this month raided the homes and offices of several Mercedes executives, including Niefer. The Stuttgart attorney's office is also probing possible kickbacks received by employees who arranged the deals.

Two weeks earlier, Niefer's home and office were searched by authorities looking for evidence in a tax investigation that likewise started with an anonymous tip.

Moreover, Niefer was at the wheel of a travel bus in Rome last July that hit and seriously injured a tourist — a woman from Stuttgart. The case is still under investigation by German and Italian prosecutors.

"If I were Niefer, I would call it a day," said one high-ranking German auto industry executive.

But Niefer, 62, has denied any wrongdoing and vows to stay on. Mercedes officials say there is a campaign to discredit him.

The jovial, back-slapping former tool-and-die maker rose through the ranks from the factory floor during a 40-year career with Mercedes. Niefer is due to retire when his contract expires at the end of 1993.

But as personal problems mount, an increasing number of officials inside Mercedes say privately that they expect him to step down.

On March 14, the offices and homes of Niefer and nine other Daimler-Benz managers were searched by more than 100 police, customs and state prosecu-

Shaky auto loans unite bankers

Lenders clamp down on own costs, credit risks sent by dealers

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

BOSTON — More than 200 consumer bankers gathered here last week to talk about the state of auto financing — and they had some harsh words for auto dealers.

Take Dale C. Miller, for example. The senior vice president of dealer corporate services for Bank of America said bankers should stop doing business with dealers who waste banks' money by turning in substandard loan applications.

"There are not many of us who have ever said to those dealers, 'Hey, do us a favor and go away,'" Miller told the Consumer Bankers Association convention.

Then there was Walter Day III. The senior vice president of Mellon Bank in Pittsburgh cited cases where dealers sent in 100 applications for financing — and only four were worthy of approval.

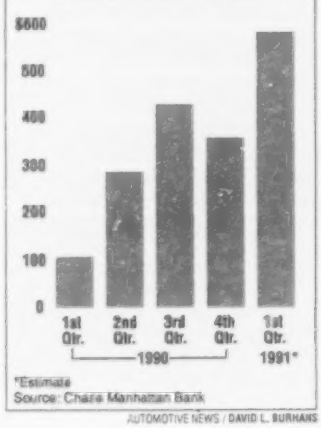
Megadealers also were singled out.

"One of my biggest nightmares is buying too much paper from one dealer, and megadealers multiply that," said Richard T. Schliesmann, senior vice president of Wells Fargo Bank in Pleasant Hill, Calif.

Bankers and auto dealers have been at odds before, particularly during recessions. While bankers gripe about dealers pushing bad credit risks, dealers have been known to call bankers fair-weather friends who bend their standards when it suits them.

Chase vs. dealers

When a customer defaults on a car loan, dealers lose part of the commission they get for arranging the loan. Before 1990, Chase Manhattan Bank recovered about $35,000 per quarter from dealers. Chart shows quarterly collections under intensified program, which uses computer calls, letters and lawsuits.
Figures in thousands of dollars.



*Estimate
Source: Chase Manhattan Bank

AUTOMOTIVE NEWS / DAVID L. BURHANS

But times like these exacerbate the tensions. While the U.S. banking industry is in turmoil, banks that handle auto loans also are competing with automakers' captive finance companies. And with cars sales down, there are fewer loan opportunities available.

At the same time, bank departments that handle auto financing are competing for funds with more lucrative profit centers in their own companies. They are pressured internally to stay clear of car loans when many of them are going sour.

Still, banks are the No. 1 source of auto financing, representing 44 percent of the nation's auto-related receivables. And the main thrust of the three-day Consumer Bankers convention was how to hang on to that business.

Automakers' captive finance companies — principally Chrysler Credit Corp., General Motors Acceptance Corp. and Ford Motor Credit Co. — have 28 percent. Credit unions and independent loan companies have the rest.

William E. Odom, chairman of Ford Credit, provided the lone perspective from the captive side.

"Contrary to what the banks think about captives, it would not be in our best interests to take over your business," Odom said.

Some big banks, including Marine Midland Bank and Citicorp in New York, and Security Pacific Corp. in California, had attempted to take on the captives, but they ended up retreating to their home markets. Ford Motor Co. recently bought out Marine Midland's nationwide business, and the bank has stopped writing new business

Nissan only makes loans to its own

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — It's a sign of the times.

Nissan Motor Acceptance Corp. told Nissan dealers at the start of the year that it would stop providing retail financing on vehicles sold by non-Nissan dealerships. In other words, the finance subsidiary no longer wants to help its dualed-dealers and megadealers sell competitive products. About 51 percent of the nation's 1,100 Nissan stores are dualed.

"Our human, facility and financial resources were being stretched thin," said John French, director of product management for Nissan Motor Acceptance. "We decided that we couldn't let the non-Nissan business grow at the expense of what we wanted to do for Nissan."

French says non-Nissan financing had grown "way too high," to almost 15 percent of the company's total retail portfolio. He adds that Nissan Motor Acceptance has already replaced almost all of the non-Nissan business it would have sold with Nissan financing.

French says a change in economic climate could reverse the decision, but he doesn't foresee it.

Some dealers say the new policy has frustrated them. They say that Nissan's decision has exacerbated the credit crunch they are facing as more and more banks pull out of the retail auto lending business.

"If somebody's in the business of buying retail paper, they should buy all the paper they can, regardless of make," said Leon Larson, dealer principal at Schrier-Larson Motor Center (Nissan-Toyota-Pontiac) in Sioux City, Iowa.

Larson said he used to sell about 20 percent of his paper to Nissan Motor Acceptance. That has dwindled to less than 15 percent since January.

Nissan continues to honor contracts it signed before Jan. 17, 1991. The company has an estimated 350,000 loans outstanding.

Stephen Cushman, who has eight dealerships outside San Diego, said he regrets Nissan's move but wasn't surprised by it.

The decision "was disappointing because they were a good source of financing," Cushman said. "But as a Nissan dealer, I understand. Their number one job is to sell Nissans."

Indeed, Cushman and others believe that other captive finance companies will also eliminate competitive financing.

"Everybody's going to have a have a captive (finance company) if they're going to make it through the decade. And captives by their very nature are established to sell the company's own products," says Mark Lasher, general manager at Koeppel Nissan in Queens, New York.

"I don't think I'd buy a franchise today that didn't have a captive."

LATE NEWS

Explorer, Navajo recalled for bumper and fuel tank defects

Ford Motor Co. and Mazda Motor of America Inc. are recalling 1991 Ford Explorer and Mazda Navajo sport-utilities for possible defects in the rear bumper and fuel tanks.

When a bumper-mounted hitch is used for towing, the rear bumper reinforcement may crack, which could cause the bumper to fall off the vehicle. Until the vehicles are inspected, Ford and Mazda recommend they not be used with bumper-mounted hitch balls for trailer towing. The recall affects about 210,000 Explorers and 9,980 Navajos.

The fuel tank recall involves 6,424 Navajos and about 24,800 two-door Explorers. A fuel tank heat shield may rub against the fuel tank, possibly causing a small cut in the upper half of the tank that could allow fuel to leak.

Ford also is recalling about 18,000 Explorers to check for possible leakage of fuel or fuel vapors from the top of the fuel tank where the vapor vent valve is mounted. The valve mount may not be properly welded, which could allow fuel to leak when the tank is being filled.

Nissan recalls 165,00 '90 Sentras

CARSON, Calif. — Nissan Motor Corp. in U.S.A. is voluntarily recalling about 165,000 1990 Nissan Sentra sedans and wagons to repair the front seat belts.

Nissan said the belts may become frayed near the retractor due to a problem with the belt guide. The 1990 Sentra coupe and 1991 Sentras are not involved in the recall.

Ford recalls Town Cars, Probes

DEARBORN, Mich. — Ford Motor Co. is recalling 1991 Lincoln Town Cars to inspect fuel lines and 1991 Probe GL models for possible seat belt problems.

About 13,400 Town Cars are being checked for proper routing of fuel lines in the engine compartment. In some cases, misplaced lines may rub against steering shafts, which could cause leaks.

Owners of about 8,000 Probes are being contacted to have two additional bolts installed in the mounting brackets for the front-seat shoulder belt retractor assembly. The bolts are needed because some spot welds on the bracket assembly may be weak.

Hyundai price hikes average 1.5%

LOS ANGELES — Hyundai Motor America has raised prices an average of 1.5 percent on its 1991 cars. The new prices take effect today.

The entry-level Excel three-door hatchback starts at $6,375, up $100. The base Scoupe also rose $100, to $8,495, and the Sonata sedan now starts at $10,900, up $200.

Like Toyota, Nissan, Honda, Mazda and others, Hyundai cited currency fluctuations and higher production and manufacturing costs as reasons for the price hike.

Ford to withhold Crown Victoria, Grand Marquis from fleets for '92

DETROIT — Ford Motor Co. said it will not sell 1992 Crown Victoria and Grand Marquis models to fleets.

Ford will concede some sales to Chevrolet in not offering those restyled full-sized vehicles to fleets in the cars' first year of production. But the automaker said it thinks it can sell all 250,000 of the new cars to individuals.

The Crown Victoria, with a base price of $18,728, officially went on sale last Thursday. The Mercury Grand Marquis, with a base price of $19,361, goes on sale in two weeks.

Those two full-sized cars, along with the similarly sized Chevrolet Caprice, have made up a vast majority of car sales to taxi companies and police agencies.

Richard Beattie, marketing plans manager for Ford Division, said the automaker should begin selling the cars to fleets in the second year of production.

— The Associated Press

Chrysler Financial is for sale

HIGHLAND PARK, Mich. — Chrysler Corp. has confirmed that it is willing to sell either a minority interest of more than 25 percent or a controlling interest in Chrysler Financial Corp.

Chrysler approached its Japanese partner Mitsubishi Motors Corp. about buying part of Chrysler Financial, but Mitsubishi has said it is not interested, Chrysler said.

Chrysler seeks to sell an interest in its financial subsidiary to raise cash and to boost Chrysler Financial's credit ratings. The subsidiary's cost of borrowing has risen because rating agencies have downgraded the debt securities rating of Chrysler Corp.

Chrysler said it continues to talk to several unidentified companies about purchasing the financial firm.

GM to invest $1 billion if Brazil provides tax break

SAO PAULO, Brazil — General Motors plans to invest $1 billion in Brazil during the next five years.

GM Vice Chairman John F. Smith Jr. attached one condition: The Brazilian Congress must approve President Fernando Collor de Mello's industrial competitiveness program that would give tax exemptions on imported machines and equipment to companies that modernize production lines.

Andre Beer, vice president of GM do Brasil, said the program would reduce investment costs as much as 25 percent.

GM's investment would go toward building the Senator family sedan and the Chevette, which would be altered to carry a smaller Japanese engine.

— Rik Turner

IRS audits dealerships to foil drug dealers

SAN FRANCISCO — Tax auditors are scouring the San Francisco Bay area for car dealers who sold "muscle" cars for more than $10,000 without telling the government.

The "special compliance project" is intended to foil outlaws who buy pricey wheels with illegal money, said Larry Wright, a spokesman for the Internal Revenue Service in San Francisco.

The IRS requires car dealers to file Form 8300, listing the buyer's name and Social Security number, in all cash sales of $10,000 or more. The agency then cross-checks the forms against the buyer's income tax return.

Drug lords often are reluctant to reveal the information to auto dealers and threaten to take their money elsewhere.

The fine for violating the law is $25,000 or 10 percent of the transaction, whichever is higher, according to the IRS.

Fiat announces lay offs

TURIN, Italy — Fiat said it will lay off 35,000 workers for five days next week and cut back its monthly production by about 20,000 units.

A spokesman said the decision, affecting one-third of Fiat's automobile work force, was made in view of a worldwide slowing of car sales.

On the Italian market, auto sales fell 6.4 percent in February from a year earlier.

BRIEFLY: *NSX repair shop in Arizona comes with a peanut gallery*

A delicate operation got underway in Scottsdale, Ariz., last week. The patient: a black 1991 Acura NSX. The doctors: mechanics at Raintree Auto Body and specialists from **Acura** and Celette, a French maker of collision repair benches. The diagnosis: severe contusions and abrasions along the left side and some internal injuries resulting from a close encounter with a highway guardrail.

The work is billed as the first repair of the hand-built sports car, for which dealers have charged more than $100,000, although the sticker is about $60,000. About 30 people turned out each day to watch, said David Perry, executive director of the Certified Collision Repair Association of Arizona. Celette even served lunch.

Raintree had to invest in new tools not contaminated by sheet metal to work on the all-aluminum body, manager Terry Lane said. "Our learning curve on this one is straight up," he said. Mechanics studied manuals and videotapes for two weeks prior to the repair and have been exchanging faxes with Japan. Lane said working before a crowd has not caused any problems.

The patient's prognosis: another 12 to 15 days for a complete recovery. The bill: about $36,000 for the unidentified Scottsdale doctor who owns the car.

DREAM ON: Honda's ad agency, Rubin Postaer & Associates, was honored last week by the Western States Association of Advertising Agencies. Eric Conn, Honda advertising manager, poked fun at **Chrysler Corp.** Chairman Lee Iacocca for comparing Chrysler to Honda. Conn said Chrysler sales dropped and Honda sales jumped after Chrysler launched the "Meet the Cars that Beat Honda" campaign last year. Conn unveiled an ad he'd like to run — a two-page spread with a shot of the Accord. Underneath run the words: In Your Dreams, Lee.

GALLOWS HUMOR: Bankers aren't known as comedians, especially in the midst of a recession. But speakers at the Consumer Bankers Association auto finance convention last week managed some humor.

"In 1986, we hired Jeanne Dixon, the psychic, to predict how things would be in 1991," said George B. Williams, senior vice president of AmSouth Bank in Birmingham, Ala.

"She looked in her crystal ball and said that from '86 to '91, it was going to be rough, really rough.

"She saw heart attacks, ulcers, a lot of stress all around.

" 'So what's going to happen in '91?' we asked. 'You'll get used to it,' she said."

And how bad is it?

"Business is so bad out there, I had a dealer tell me people who don't even intend to pay for the car aren't interested in buying," said Robert P. Noble III, executive vice president of Wachovia Bank & Trust Co. in Winston-Salem, N.C.

GENERALLY GOOD IDEA: Chrysler Corp. watchers have assumed there are two crown princes — Bob Lutz and Steve Miller — in line to succeed Lee Iacocca when he eventually retires as chairman.

But in an interview in *Fortune* magazine Iacocca suggests there are "four or five" good candidates inside the company who might succeed him. He is mum on who those insiders might be. But Iacocca is more vocal on another possible successor — Gen. Norman Schwarzkopf.

"He's a brilliant strategist and a hard worker, and he's going to leave the Army. He knows objectives and he must know people, and he sure would have discipline, wouldn't he? What else does an executive need?" Iacocca asked.

GM HELPS GULF: The war's over, but the cost goes on. **General Motors** and its employees are helping, pitching as much as $750,000 toward the $30 million goal of the American Red Cross Gulf Crisis Fund for people displaced by the war.

AND ON U.S. SHORES: Soldiers, sailors and their spouses are being offered $800 off the price of any new **General Motors** car, on top of any general rebate. The deal applies to all service personnel and to reservists who have been called to active duty.

Freightliner medium-duty line bows; low-end models eyed

By Joseph Bohn
TRUCK EDITOR

PHOENIX, Ariz. — As Freightliner Corp. introduces its new Business Class of medium-duty trucks, officials at parent company Mercedes-Benz AG in Germany are sighting smaller truck segments that they don't yet cover.

"We are working on that," said Helmut Werner, vice chairman of Mercedes-Benz, at the unveiling of the medium-duties.

"Last year, we decided that we first want to bring to life this Class 6-7. Then, we also looked into Classes 3-4-5. I believe 3-4-5 will have a big priority," added Werner, who heads Mercedes' worldwide commercial operations.

"We are in the definition phase right now," he said.

Mercedes-Benz invested $100 million to produce its new-from-the-ground-up medium-duties, which went into production in Cleveland, N.C., in July.

The company will invest a total of $200 million in the United States during the next five years to add new medium-duty cabovers to the Business Class and to upgrade other products in Class 8, Werner said.

If Freightliner's plans materialize, the United States will soon rival Brazil as Mercedes-Benz's second-largest worldwide truck-producing center behind Europe, Werner said.

But Brazil will continue its much larger in-house production of components, he added.

Freightliner's trucks and components have sufficient quality to be exported, Werner said, but the dimensions of the vehicles wouldn't meet legal requirements in Europe.

Still, Freightliner has begun shipping kits for final assembly to Australia and Mexico and is looking at potential exports to Central and South America to shore up its globalization and manufacturing operations, said Dieter Zetsche, Freightliner president and chief executive officer.

Werner said he anticipates "tremendous improvements" in Freightliner's profitability in 1991 and "a very much acceptable profit situation in 1992."

Officials don't look for much change in truck sales this year, but they expect a good upturn to begin in 1992 and carry through 1993-1994. They look for some falloff in 1995, due to stiffer emissions standards.

Freightliner's new medium-duties reflect its determination to become a bigger player in Classes 6-7 in which it accounted for only 1.33 percent of the 123,553 units sold in the United States last year. The company also expects economic and regulatory events that could dramatically alter the sales mix in Classes 6-7-8.

Regional hub-and-spoke distribution systems continue to increase, favoring medium-duty models. So do improvements in mid-range diesel engines that enable smaller trucks to handle bigger loads. Requirements for certified driver licensing in Classes 7 and 8 also favor Classes 5-6 transportation.

Requirements that half of fleet vehicles in Class 6 and below use alternative fuels by 1998 also influenced the company in its investment.

The new Business Class trucks are available in families: the FL with Cummins B5.9-liter or C8.3-liter domestic engines and the MB with Mercedes-Benz OM 366LA engines.

The trucks will be available initially in a conventional cab and, subsequently, in low-cabover configurations.

They are offered in three classes: a 60 series for Class 6, a 70 series for Class 7 and an 80 series — a "Baby 8" for Class 8.

The FL60 and MB60 series range from 21,000 to 25,500 pounds gross vehicle weight, with engine horsepower from 160 to 190.

The FL70 and MB70-series cover the heart of Class 7 with 27,000 to 33,000 pounds gross vehicle weight. Engine horsepower ranges from 160 to 250 hp.

The FL80 and MB80 cover a 33,001 to 56,000 pound gvw range. Their engines produce 210 to 275 hp, with tandem axle ratings to 34,000 and 40,000 pounds.

Additional component and model availability will occur in stages in the next two years, with bigger engines and tandem axles scheduled for an early 1992 debut and the low-cabover models and larger single-drive axles for 1993.

Mercedes-Benz invested $100 million to produce its new Freightliner Business Class line of medium duties, which are produced in North Carolina.

Dealers love new line, but not prices

PHOENIX — Freightliner dealers are enthusiastic about the new line of trucks, but express some concern they may not be competitively priced.

"Everybody (dealers) is hyped and ready to go. If you talk to any of the dealers, they'll tell you they liked very much what they saw. I wish I had them (trucks) right now," said Louis Schwartz, owner of Louis Schwartz Inc., a metro New Orleans Mercedes/Freightliner/Isuzu dealer.

Freightliner held its dealer meeting following a press preview.

The concern that the trucks may be overpriced relative to competition appears to be a minor one, since Freightliner will be under considerable pressure to make a success of its new models.

James Hebe, Freightliner senior vice president of sales and marketing, said the company's long-term goal is to have 300 medium duty outlets in the United States as an optimum number.

They will be structured into 15 medium-duty-only dealers; 150 full-line Class 6-8 dealers and 10 heavy-duty-only dealers. The figure will also include up to 100 dealer satellites or service-only outlets.

Hebe said 120 U.S. Freightliner and Mercedes-Benz dealers and 33 Canadian ones have been granted the new medium duty dealer agreement thus far. These 153 North American dealers operate a total of 171 outlets.

Some 12 U.S. and one Canadian dealer represent medium duty Freightliner trucks only.

The remaining 140 are full-line Freightliner dealers.

TRUCK BRIEFS

GM focuses 'smart' r&d

PALM BEACH GARDENS, Fla. — General Motors created a special office to coordinate all its Intelligent Vehicle Highway System research and development projects, Clifford J. Vaughan, vice president and group executive of GM Truck & Bus Group, told the Truck Rental and Leasing Association.

Vaughan cited the importance of technologies such as automated vehicle identification and weigh-in-motion technology in improving the flow of commercial traffic.

He said GM sees industry sales of 4.5 million trucks in the 1991 model year, including 4.3 million light, 115,000 medium and 95,000 to 100,000 heavy models. That is off from 4.9 million in 1990, with 4.6 million light, 136,000 medium and 127,000 heavy trucks sold.

Rockwell consolidates

CEDAR RAPIDS, Iowa — Rockwell International Corp. combined its Automotive Electronics organization with its Mobile Communication Satellite Systems business.

David G. Lammers, vice president of the Mobile Communication operation, heads the new group.

Rockwell plans to provide complete integrated mobile asset management systems for operations.

Truck equipment studied

LIVONIA, Mich. — The National Truck Equipment Association has produced a comprehensive 59-page study of the commercial truck industry, its operations and sales, based on surveys of 400 members, including commercial truck chassis makers and body equipment producers and distributors.

Industry sales in 1989 were an estimated $10 billion, with nearly 450,000 truck bodies produced. The average distributorship has sales of $2.6 million.

MINIVANS

FROM PAGE 1

Chrysler-Plymouth marketing plans manager. He said it is too early to gauge retail reaction because the units are just beginning to trickle into showrooms.

"Wholesale orders have been great because dealers recognize the vehicle's potential for incremental sales," Julow said. "We are not planning to give up the high end of the market. But we have pretty well mined the sales of minivans over $18,000.

"The growth opportunity is in the $14,000 to $18,000 price range, which is the four-door sedan market," he said. Sales of base minivans currently represent about 20 percent of Chrysler's total minivan sales, he said.

> "Wholesale orders have been great because dealers recognize the vehicle's potential for incremental sales. We are not planning to give up the high end of the market. But we have pretty well mined the sales of minivans over $18,000."
>
> **James R. Julow**
> Chrysler-Plymouth marketing

Chrysler anticipates continuing growth in the minivan market as persons in their 20s start families earlier and buyers with grown children opt for the vans for travel and leisure pursuits.

Chrysler invented the minivan segment when it introduced the Dodge Caravan and Plymouth Voyager as 1984 models. In February of this year, the company held 46 percent of the U.S. minivan market.

The minivan strategy reprises Chrysler's decision last fall to standardize equipment on the Jeep Cherokee. At the start of the 1991 model year, Chrysler introduced a lower-priced Jeep Cherokee called the Sport edition. The value version of the Jeep sport-utility, which was designed to shore up Cherokee sales against the lower-priced Ford Explorer, has brought in new and younger buyers, Julow said.

In February, dealers throughout the country began marketing value versions of the Plymouth Voyager and Dodge Caravan in dealer association ads, Julow said.

Chrysler is considering new national divisional advertising campaigns in the second quarter to tout pricing and promote the lower-priced van. The current minivan advertising campaign uses Iacocca and stresses vehicle safety features, including an air bag.

Air conditioning standard

The value versions of the Caravan and Voyager are short-wheelbase models equipped with a 2.5-liter four-cylinder engine and three-speed automatic transmission. Standard equipment includes air conditioning, cloth seats, rear-window defroster, dual horns, a sound package with AM/FM radio.

Air conditioning is the major item. It's $857 extra on the base Caravan and Voyager. The standard rear window defroster is another plus for the value version. It's $217 extra on the regular model.

Essentially, $1,400 worth of optional equipment has been made standard on the value version for $545. The $13,811 price of the five-passenger value van is the $13,266 base sticker plus the $545.

"These are options that virtually every one of our customers ordered anyway," said Martin Levine, Dodge Division general manager. "The strength of this vehicle is in lowering the price and not taking out popular equipment. We are not taking a minivan and stripping it."

Until the recession and the war in the Persian Gulf torpedoed the auto market, Chrysler could rely on the sale of higher-priced, more heavily equipped vans. The company's estimated $4,000 pretax profit margin will be lower on the value vehicles, but they enable the company to try to buy market share in a soft market. That is important to Chrysler because much of its image is tied to its performance in the minivan segment.

MINIVAN SALES

Calendar Year	Chrysler minivans	Chrysler pct. of minivan mkt.	Total minivans
1983....	8,192	100.00	8,192
1984....	190,516	99.0	192,501
1985....	242,827	60.1	404,200
1986....	240,634	42.2	569,793
1987....	307,841	47.5	647,427
1988....	422,413	53.0	796,992
1989....	406,331	48.9	831,505
1990....	380,374	40.7	933,630

Pointing at new segment

Chrysler now is able to focus on the lower-priced minivan segment in part because of changes made in the company's national contract with the UAW last fall.

That change permits the addition of a third shift at Chrysler's St. Louis No. 2 assembly plant, which builds long-wheelbase minivans. The additional 50,000 units that can be built at St. Louis free up capacity at the company's Windsor, Ontario, plant, which builds short-wheelbase units.

Because of capacity constraints on long-wheelbase vans at St. Louis, Chrysler has been selling more loaded short-wheelbase units from Windsor. Additional production at St. Louis would mean that Windsor could build more short-wheelbase value versions.

Julow said a decision is imminent on whether to implement the third shift at St. Louis No. 2 during model changeover this summer. It can be done only during an extended downtime period. Implementation could be delayed until December vacation downtime if sales remain weak.

Long-wheelbase models now represent 45 percent of Chrysler's minivan sales. Chrysler continues to forecast growth in the minivan market. The company anticipates that the segment, which now accounts for about one million sales annually, will reach 1.5 million annually within five years, Julow said.

"If we're going to get another 500,000 units out of the market, a great bulk of them will come from the $14,000 to $18,000 price range," Julow said.

A broader market

He said Chrysler's optimism about the segment's growth is based on consumer research that upended some of the company's assumptions about the minivan market.

Specifically, Chrysler assumed until recently that the minivan is a "life-stage" vehicle. Julow said. Parents who relied on the minivan while raising children were expected to return to cars when they became "empty-nesters" whose children had grown and left home, he said.

But those consumers are becoming repeat minivan buyers as they pursue hobbies and travel, according to Julow. Chrysler's consumer research indicates that 85 percent of empty-nesters who own a minivan intend to purchase another one next time.

"I don't think anyone counted on that," Julow said. "We assumed a migration through the segment, which is not occurring."

In addition, the twentysomething group is starting families at an earlier age than did the thirtysomethings, bringing them into the minivan market sooner, he said.

Chrysler has maintained that its minivan sales have not been affected by a report in the February issue of *Consumer Reports* magazine that labeled the company's A-604 four-speed automatic transmission "a lemon." Most Chrysler minivans are equipped with that transmission.

The company said it sold 28,914 minivans in February, 47 percent more than in February 1990. The vans accounted for one of every five vehicles Chrysler sold last month.

BANKERS

FROM PAGE 2

outside its home territory.

"The bankers' graveyard is full of those that tried that business. None of us has been successful in trying to take the business nationwide," said Robert P. Noble, executive vice president of Wachovia Bank & Trust Co. of Winston-Salem, N.C.

"All those guys proved was that this is a regional business. It's still a good business, and a profitable business," said William V. Lauman, senior vice president and dealer banking manager for Seafirst Bank in Seattle. The Pacific Northwest, for instance, is one of the few U.S. markets where car sales haven't nose-dived.

Noble urged his peers to stick with auto financing, even if the short-term prospects are bad.

"The car business is not going to go away. You and I know it's going to come back. I don't think Ford Motor Credit and GMAC really want to handle *all* of this business," he said.

Banks that have elected to stay in auto financing are sharpening their pencils. They are reducing risk and cutting costs — often by cutting their staffs — at every stage of the business, from originating new loans to pursuing deadbeats.

Many banks are getting more work out of fewer people by using automated means to process loan applications and monitor existing loans, watching for late payments or other trouble signs. If loans do go bad, automated phone systems can crank out thousands of phone calls a day to demand payment.

In some cases, banks are raising rates, or raising rates for higher-risk customers.

Banks also are ditching dealers who are seen to be poor risks, whether it is the dealers themselves that's the problem, or the customers that the dealers refer to the bank.

William J. Paul Jr., senior vice president of Society National Bank in Cleveland, said his bank "eliminated" more than 300 dealers, or half the dealers in the bank's auto loan portfolio. The loans those dealers were originating didn't measure up. There were too many delinquencies, too many applications that had to be rejected, and so on.

That reduction in volume allowed the bank to cut its staff, saving more money.

"We really created a lot of rumble in our communities when we changed the way we do business," Paul said. "But that's a risk you take."

The captives have their own challenges. Ford Credit's Odom said he's propping up some financially weak dealers instead of terminating them, despite "sobering" losses on floorplans, capital loans and revolving credit.

Odom

That may mean allowing a dealer to postpone a payment, or Ford Credit may even loan the dealer more money so the dealership isn't undercapitalized, he said.

"Unfortunately, we have a plateful of weak dealers. Hopefully, that plateful won't cause too much indigestion," Odom said. He said the Ford dealer body is in the worst financial shape it's been in since the recession years of the early 1980s.

He also denied the complaint among bankers that the captives can undercut banks in the auto financing business because the captives only have to sell cars, without worrying about making a profit.

"Ford Credit must make a profit standing on its own, without financial assistance from Ford. The idea that the manufacturer props up the captive is a myth. It isn't true. We have to stand up tall and straight in the financial markets on our own," Odom said.

> "Unfortunately, we have a plateful of weak dealers. Hopefully, that plateful won't cause too much indigestion."
>
> **William E. Odom**
> Ford Credit chairman

He did acknowledge that Ford Credit can do some high-risk deals that "wouldn't make sense" for a bank, like first-time buyer programs. But he said Ford Credit can afford to do so because of its size and its geographical diversity.

NIEFER

FROM PAGE 2

tion officials. The raid was based on anonymous informants who alleged that trucks with military applications were supplied to Iraq last summer. Authorities carried off documents but refused to say what they found.

Last week, the German magazine *Spiegel* alleged that 20 Mercedes cabs with trailers modified by a German contractor firm for missile launch capability were delivered to Iraq.

Daimler officials strongly deny having engaged in illegal imports. Matthias Kleinert, the company's vice president of public affairs, charged that Niefer is the target of a smear campaign. Some German auto industry executives accuse the country's two boisterous weekly news magazines, *Spiegel* and *Stern*, of targeting Germany's largest industrial concern.

A German industry analyst said: "There are exceptions in the company, but in general Mercedes is very highbrow and likes to talk down to you. They've made a lot of enemies, and some are deciding to pay back."

Competitors in Germany have rallied around Mercedes.

"We here in Munich should take heed and not be too happy," said a BMW executive. "This would not just hurt Mercedes, but would hurt German industry if companies are continuously charged with breaking the law with sales of arms."

"Gloating would be very, very foolish," he said. "This is far too serious. Mr. Niefer is being charged with so many different things that altogether it suggests to us that there are people who have an interest in Mr. Niefer being discredited."

Truck division chief Helmut Werner, who serves as vice-chairman of Mercedes-Benz and is widely regarded as parent company Daimler's next chairman, would be a likely replacement for Niefer.

Werner, the former chairman of German tiremaker Continental AG, met the allegations of illegal truck sales head-on. He said the anonymous tipsters may have been referring to an order received from Saudi Arabia in December for 17 articulated heavy trucks and trailers. Mercedes has decided not to fulfill that order on the recommendation of the German government.

Werner said delivery of 124 heavy trucks to Iraq last summer was halted after a United Nations embargo was announced following Iraq's invasion of Kuwait. A dozen trucks reached Iraqi hands and the rest were returned to Europe.

The tax investigation reportedly centers on Niefer's home in an exclusive residential area of Stuttgart. Critics allege that Niefer first rented the house, then bought it, for less than its market value from the landlord, a representative of several German auto industry suppliers doing business with Mercedes.

The tax allegations followed the Rome bus incident last summer. After a lunch with managers from Mercedes-Benz of Italy, Niefer offered to drive the group to the airport, even though he apparently did not possess a license to do so. According to accounts of the accident, the rear of the bus swung outward while on a curve, pinning a German woman, Christa Rehm, against a wall. Rehm spent several weeks in a hospital and underwent multiple operations.

Niefer is under investigation for negligence and leaving Italy with the matter unsettled. In addition, Rehm has filed suit against Niefer.

Mitsubishi adds dealer incentives

Mitsubishi Motor Sales of America Inc. is paying rebates to dealers on sales of selected 1990 and 1991 models through April 30. Payments are based on performance against quota.

Dealers will be paid for each eligible retail sale or lease of 1990 and 1991 Galant, Eclipse and Mirage cars and two-wheel-drive or four-wheel-drive pickup trucks. Payments are $300 for zero to 25 percent of quota, $500 for 26 to 50 percent and $1,000 for 51 percent and above.

Dealers also will receive a $300 bonus on each 1990-91 Galant and Eclipse sold, refroactive to the first unit sold, when the combined sales total reaches 25 units.

Sales of the 1990-91 Mirage and pickups also count toward attainment of the bonus objective.

In addition, 1990 and 1991 Precis and 1990 Sigma, van and wagon sales will count double toward attainment of the dealer's bonus objective, but there are no rebates on those models. Mitsubishi also announced a non-retroactive per-unit bonus of $1,500 for the second 1991 Montero sold and $2,000 for each additional 1991 Montero sold.

Yugo sales plummet; 26 laid off

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Yugo America Inc. has laid off 26 of its 89 U.S. employees, citing poor sales for Yugo and the auto industry in general.

"We're seeing a slight pick up in sales recently, but not quite what anyone expected with the end of the war in the Gulf," said John Spiech, Yugo president and chief executive officer. "It's time to trim the sails."

Yugo sold 615 cars in January and February, a 56 percent decline from the same period a year earlier. In the same period in 1987, its best year in the U.S., Yugo sold 9,233 cars.

The lay-offs include one sales representative and one service representative, which will mean the elimination of one of the importer's nine sales and service districts. That will require the company to redistrict the country.

Spiech said the lay-offs were mostly clerical and office support personnel at its New Jersey headquarters.

A company spokesman said many of Yugo's larger-volume dealers are located near military bases and were hurt by the mobilization of troops for war.

> "It's time to trim the sails."
>
> **John Spiech**
> Yugo president, CEO

Spiech said the company hopes a new four-door hatchback 103 model, also called the Florida, will revive sales when it is introduced later this year.

CONGRESS

FROM PAGE 2

Bryan's CAFE language in an energy bill he introduced last Thursday. Those levels, he said, were only "a starting point."

He predicted that the Bryan bill will not reach the Senate floor but will be incorporated into an energy package.

During a hearing on another energy bill, Sen. J. Bennett Johnston said that his committee plans to increase CAFE. But his approach is different from Bryan's. Johnston wants "to stretch Detroit to the absolute maximum consistent with consumer acceptance and without costing jobs and without hurting the economy."

In answer to Johnston's questions on what CAFE automakers can achieve, experts repeatedly said that the levels in the Bryan will would be difficult, if not impossible to meet.

In a Senate Energy and Natural Resource Committee hearing, K.G. Duleep, director of engineering for Energy and Environmental Analysis Inc., used a "hypothetical" 2001 Ford Taurus to demonstrate what kind of CAFE gains he thinks are feasible.

Duleep's Taurus would feature many of the technologies that Bryan has said would help cars meet the goals in his bill: a sleeker body, a five-speed electronically controlled transmission with torque converter lockup, improved tires with lower rolling resistance and low friction oils in the crankcase and drivetrain. The Taurus would also weigh less, 2,810 pounds vs. 3,090 pounds for the 19.. model.

According to Duleep, the 2001 Taurus could achieve a 29 percent improvement in fuel economy, or 35.3 mpg. Those improvements are less than the Bryan bill would require. Duleep said the car would also cost $800 more, a price consumers would be willing to pay only if gasoline were at least $2 a gallon.

Alternative fuels

Both the newly introduced Wirth bill and President Bush's energy plan would require fleets to use alternative fuels.

Linda G. Stuntz, deputy undersecretary for policy at the Energy Department, said last year's Clean Air Act fell short of the administration's goals. She said the nation's 21 worst-polluted urban areas could meet new pollution requirements with reformulated gasoline and diesel fuel instead of with alternative fuels, as the administration had hoped.

To pave the way for public acceptance of alternative fuels and the development of a distribution system, the administration put a new alternative fuels mandate into the National Energy Strategy, which will go before the Senate in the form of a bill.

The administration's new plan would require that fleets of at least 10 cars in the most severely polluted areas and 20-car fleets in metropolitan areas with a population of more than 250,000 run on methanol, ethanol, 85 percent alcohol mixtures, natural gas, liquid petroleum gas, hydrogen or electricity.

The administration estimates that the energy strategy would result in three million alternative-fuel cars on the road by 2000 and 5.4 million by 2010. "We expect the motor vehicle industry will be able to produce these vehicles beginning with their gradual introduction in 1995," Stuntz said.

If the cars are not available "for unforeseen reasons," the secretary of energy would have authority to waive compliance requirements, she said.

Wirth's energy bill embraces the Bush alternative-fuels program. But Wirth goes several steps further and mandates that a percentage of all fuels sold be non-petroleum, beginning with 10 percent in 1998 and increasing to 30 percent in 2010. Refiners and wholesalers could reach the goal themselves or buy credits from those who sell natural gas or methanol for use in vehicles, or from manufacturers of electric cars.

On the House side, a bill that provides a 20 percent tax credit for the equipment to convert a vehicle to run on clean-burning alternative fuels was introduced by Rep. Michael Andrews, D-Texas. Andrews told the Senate Energy Committee that tax credits would cost $20 million over five years but would become more expensive in later years.

Electric vehicles

Similar bills were introduced in the House and the Senate, in which politicians heralded the start of an "automobile revolution" through electric vehicles.

The bills would allocate $50 million in federal funds over 10 years for electric car demonstration projects to pump up market demand.

Some of the funds would be earmarked for Department of Energy and industry research to develop new batteries. Current work has focused on reducing the size of electric car batteries while increasing the time they can hold a charge. The Big 3 are already involved in a joint battery research consortium.

Truck safety

Bryan held a hearing on his bill that would mandate air bags in passenger cars and light trucks. But an hour earlier, Jerry G. Curry, administrator of the National Highway Traffic Safety Administration, announced that a rule mandating passive restraints in light-duty trucks had cleared final regulatory hurdles.

As expected, the rule allows companies to phase in the restraints. Twenty percent of their light-truck fleets must have passive restraints (generally air bags or automatic seat belts) in the 1995 model year, 50 percent in the 1996 model year, 90 percent in the 1997 model year and 100 percent in the 1998 model year.

Earlier, NHTSA had proposed a three-year phase in, but automakers convinced the agency to allow one more year for the most difficult design problems, such as tow trucks.

Curry said he would not oppose Bryan's bill but warned that it "might remove any incentive for manufacturers to continue research and development plans to explore alternatives to air bags such as 'user friendly' interiors or 'air belts.' "

LAFORZA

Bankruptcy judge to review assets

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

The auto industry may not have seen the last of Laforza, the $43,850 sport-utility.

Next week a federal bankruptcy judge in Oakland, Calif., will hear testimony from Laforza Automobile Inc. creditors and other experts regarding sale of the company's assets.

At the blue sky end of the possibilities is Laforza being imported from Italy again.

The case began last August, when Laforza was forced into involuntary Chapter 7 bankruptcy by creditors to whom it owed more than $8 million.

Chapter 7 doesn't allow a debtor to reorganize; it requires liquidation of assets.

In January, Laforza's assets were auctioned off, but there is now a dispute over just what was sold.

Everyone agrees that some of the company's tangible assets — including 13 sport-utilities, some parts and equipment — were up for the highest bidder. Motor Sports International Inc., based in Dublin, Calif., outbid several others in an open auction with a bid of $401,000.

Afterward, Motor Sports International asserted that it had bought Laforza's intangible assets as well, including "the name, engineering rights, . . . applicable patents and proprietary technology, etc."

The company says that all such assets were clearly for sale according to the court papers.

But some of the losing bidders, including Ohio-based Samex Co. and Badrahn Enterprises, a Saudi Arabian company, disagreed.

They said intangibles were not for sale, and if they had been, they would have bid higher.

Lawyers admit the wording on some documents was confusing, so Judge Edward Jellen scheduled the special April 4 hearing.

He will let Motor Sports International's bid stand as the winning bid for all assets unless he determines that it was grossly below actual value.

Motor Sports International is a broker specializing in the export of luxury vehicles. Former Laforza Chairman Joseph Monterosso has been hired as a consultant by the company.

"I want to spend this money. I'm going to push this thing to the end," said owner Martin Diefenbach.

Added Monterosso: "What we paid is far more than the assets are worth. (The trustee) should be happy with that. We bought the assets fair and square and now they're trying to nullify the sale. It's sour grapes."

Diefenbach would not discuss his plans for Laforza. He said reviving the sport-utility was not out of the question, "but at this point that's counting chickens before the eggs."

Diefenbach said he will try to buy the 250 to 300 vehicles that are being stored at C&C Inc. in Brighton, Mich., and hinted that he'd like to export them.

Those vehicles were not part of the sale, as they had been pledged as collateral to C&C Inc., which assembled the sport-utility, and Bank One of Indianapolis, which had loaned Laforza $4 million.

High court: Firms can't bar women from risky jobs

WASHINGTON — The Supreme Court ruled unanimously last week that women workers in lead battery plants, not the employers, should decide whether to risk their health and the health of their fetuses. Johnson Controls Inc., a Milwaukee-based maker of automotive batteries, was sued by the UAW in the case.

Like Johnson Controls, General Motors has excluded fertile women from jobs that could expose them to high concentrations of lead in five battery plants and certain foundries. Now the companies must redesign their personnel policies. A General Motors spokesman said the ruling won't have a major effect, as only 2,000 jobs are involved in battery operations, and not all of those involve exposure to lead.

Honda again tops Chrysler

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

For the fourth consecutive week, Chrysler Corp. plans to build fewer cars in the United States than Honda of America Manufacturing Inc.

Chrysler's projected production for this week is 7,050; Honda estimates its output will be 9,405.

U.S. automakers scheduled 108,933 cars last week, 4.36 percent above the prior week but 21.58 percent below the same week last year.

Year-to-date, 1,204,056 cars have been assembled, 7.94 percent below the 1,307,973 that were produced last year at this time.

Last week's estimated truck production was 63,360, up 58.38 percent over the previous week, but 30.90 percent below the year-ago week.

So far this year, U.S. truck production is estimated at 624,058. It trails last year by 27.69 percent.

Subaru-Isuzu Automotive Inc. canceled two shifts at the Lafayette, Ind., facility on March 13 and 14 due to weather conditions.

General Motors ran Saturday overtime for the second consecutive week at the A plant in Lansing, Mich., where the Buick Skylark and the Oldsmobile Cutlass Calais are built.

Saturday overtime was also scheduled at the postal line of GM's Moraine, Ohio, truck facility.

Ford Motor Co. scheduled daily overtime for the second consecutive week at the Louisville, Ky., truck plant.

Car output up 22% in Canada

Last week, Canadian automakers estimated production of 26,531 cars, up 22.80 percent over the prior week and 22.35 over the year-ago week.

Year-to-date, car production in Canada is estimated at 219,149, down 5.52 percent from 1990.

Truck production in Canada was estimated at 23,475, up 61.42 percent over the prior week and 15.71 percent above the 1990 week.

So far this year, Canadian truck production is estimated at 173,613, down 16.34 percent from the same period in 1990.

GM scheduled overtime at the Ste. Therese, Quebec, facility where the Oldsmobile Cutlass Calais is assembled.

Manheim, GE merge to form auto auction colossus

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

In a move that could have far-reaching effects on the marketing of used cars, Manheim Auctions has merged with General Electric Capital Auto Resale Services Inc. in a melding of assets estimated at $1.2 billion.

The merger, which also includes Ford Motor Credit Co. as a partner, gives the newly formed company, Manheim Auctions, 46 locations in the United States and Canada, nearly twice as many as its nearest rival Anglo American Auto Auctions. Anglo American, based in Nashville, has 25 auctions.

Though GE and Manheim officials play down the importance of the merger, the sheer number of auctions operated by the new company gives it tremendous marketing clout, particularly for institutional vehicles sold by auto manufacturers, fleet and lease companies and banks through auto auctions.

"It's a win-win for our customers and the industry," said Stephen McNeely, president of GECARS. "The new organization will enhance our abilities to meet the needs of the marketplace and provide an unparalleled vehicle remarketing service for our customers."

Warren Young, president and chief executive officer of Manheim Auctions, will continue in that capacity in the new organization.

"Both companies are compatible, representing geographic locations with few overlaps," said Young. "GE handles more institutional vehicles, and we handle more dealer cars, so we are getting the best of both worlds."

Negotiations between the two companies have been under way for months, prompting industry-wide rumors of a merger.

Manheim Auctions, based in Atlanta, is a division of privately held Cox Enterprises. Manheim will retain its name, hold a controlling interest in the new company and appoint the majority of its six-member board of directors. Officials declined comment on the makeup of the board or shares held by the companies involved.

GECARS is based in Barrington, Ill., and is a subsidiary of GE Capital Corp. It has 20 auction locations with estimated revenues of $225 million in 1990. Manheim operates 26 auctions with 1990 revenues easily matching those of GE's

SERGIO DORANTES

Mexico's vehicle sales have been leaping by an average of 30 percent a year since 1988. Among the busy plants is Ford's car and truck facility in Cuautitlan, where a worker, installs an instrument panel.

SOUTH OF THE BORDER

Is Mexico the Big 3's pinata, filled with potential sales of 4.5 million? Proposed trade pact adds to promise

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Ask Detroit's carmakers and suppliers what's left to feel good about these days and you might get a one-word answer: "Mexico." While the U.S. auto industry languishes in the worst market downturn in a decade, hundreds of North American automotive firms are looking for opportunities in the booming Mexican market.

Mexico is awakening from nearly a decade of economic depression to become a potential powerhouse of auto sales, auto production and auto exports. And if a proposed free-trade treaty materializes during the next year among Mexico, the United States and Canada, building factories and moving cars and parts across the Rio Grande will be scarcely different from doing business in Texas.

"There is an enormous growth potential here," confirms Nicholas Scheele, president of Ford Motor Co. de Mexico S.A. "It's a market of 88 million consumers who have been economically depressed for years as a result of the 1980s oil bust. And now it's opening up."

There are some potential snags. Mexico has a history of disappointing its automaking neighbors. Car sales blossomed once before in the late 1970s, only to dwindle during the 1980s. The Mexican economy generated excitement once before, only to collapse with the price of crude oil.

Mexican investment has looked alluring before, as far back as the 1930s, only to fall prey to political turmoil and protectionist governments that nationalized U.S. ventures.

There also are painful social issues to address. Poverty is still rampant in the country, despite the new economic boom, and labor conflict common. At Ford's Cuautitlan assembly plant near Mexico City last year, labor grievances interrupted production for months after a worker was murdered in an internal union dispute.

Labor groups in the United States and Canada sternly warn that improved social conditions and higher wages will be necessary before they will poli-

Mitsubishi: Weight, not size, is mpg ticket

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — The tough strictures of the Bryan fuel-economy bill — termed "impossible" to meet by more than one U.S. auto industry executive — can be met quite nicely without returning to stripped-down econoboxes, according to Mitsubishi Motors Corp.'s head of engineering and new-car development.

Keiichi Kisuna, a Mitsubishi managing director, says weight reduction is the obvious answer to meeting the requirements of a bill by Sen. Richard H. Bryan, a Nevada Democrat, requiring automakers to increase corporate average fuel economy scores 40 percent by 2001. But smaller size does not have to mean less space or reduced performance, Kisuna insists.

According to the 62-year-old Kisuna, Mitsubishi has begun design work on a four-meter-long (13.2 feet) car designed around the interior space of a 4.7-meter-long (15.5 feet) car, using space "like a heli-

Toyota puts hold on truck sought by U.S. sales arm

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota Motor Corp. last week confirmed that the company has considered a proposal to build a mid-sized pickup truck for the U.S. market, but said all deliberations on the project had been shelved indefinitely and that a prototype vehicle did not exist.

The decision to move the project to the back burner appears to repudiate the efforts of Toyota Motor Sales U.S.A. to win a quick decision from Japan to proceed with the new pickup.

Senior Toyota U.S. officials, including executive vice president Robert McCurry and senior vice president Al Wagner, have actively fostered the impression in recent months that a go-ahead decision on the vehicle was imminent.

In January, McCurry said a decision on the project was expected in "60 days," although the U.S. sales arm later said the project had been "delayed."

In a statement issued in Tokyo Friday in response to a query, a Toyota spokesman told *Automotive News* that the automaker had indefinitely delayed a decision on introducing a "new-size" pickup in the United States "due to considerations of the condition of the American market and uncertain

Monaco mania hits New York:
A New York Dodge dealer uses almost $4,500 in incentives to cut the price of Dodge Monacos to $8,995 and sells 152 of them in six days. See story on Page 2.

Bargain-priced Monacos selling like hotcakes

Calls flood New York dealer; finding enough cars is tough

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Jim Goldfein has a message for the U.S. automotive market: Offer consumers value and watch sales ignite.

Goldfein says he is proving that maxim with the Dodge Monaco, a sales dud turned star performer in a Manhattan Dodge showroom. But Goldfein is not creating a show-stopper singlehandedly. Chrysler Corp. is underwriting Goldfein's sales success with the Monaco by paying out more than $4,500 per unit in dealer and customer incentives.

Goldfein, whose dealership sold only 10 Monacos in all of 1990, sold 152 of the sedans between March 22 and March 28. He is receiving almost 100 calls daily from customers wanting to know more about the Monaco. On March 22, 157 callers seeking information about the car clogged the phone lines at Potamkin Chrysler-Plymouth-Dodge-Mitsubishi-Sterling in Manhattan.

Goldfein, who is vice president of the dealership, says the reason is simple. On March 22, the dealership began advertising an $8,995 1991 Dodge Monaco, a price described in the ad as 41 percent below the $15,124 manufacturer's suggested retail price.

Now Goldfein is trying to convince incredulous Chrysler Corp. officials he wasn't kidding when he ordered 460 Monaco units.

Chrysler has good reason to do a double take when eyeing Goldfein's order. The company built only 329 Monacos for the North American market from Jan. 1 to March 23. Only 423 Monacos were sold in the United States in all of January and February.

But Goldfein says he has already sold 152 of the 460 units ordered and anticipates no difficulty retailing the remainder.

"It's a feeding frenzy like the old days," Goldfein said. "If the manufacturers would only get the message, and the message is if you get a low enough price people will buy them even in the worst of times.

"But you have to offer value. Price is not the key," he said.

Goldfein is being helped in a big way by Chrysler in his sticker slashing.

Chrysler inherited the Eagle Premier and the companion Dodge Monaco when the company acquired American Motors in 1987.

When Chrysler bought Renault's stake in AMC, it agreed to sell at least 300,000 Renault Premier sedans between 1988 and 1992 or pay a penalty of up to $350 million. The Premier, sold under the Eagle brand, and its Dodge companion introduced in the 1990 model year have been all but stillborn in the market.

In March Chrysler apparently decided to pump money into dealer pockets rather than ship it overseas to Renault.

The company will not confirm dealer incentives. But Dodge dealers say the company is paying to dealers at delivery $1,000 for the first Monaco/Premier received, $1,500 per unit for the next two units and $2,000 per unit for any additional units delivered. In addition, dealers receive another $1,000 per unit at the time the cars are ordered.

Also, spiffs for salespersons range from $50 to $1,000 per unit

see MONACO, page 46

With up to $4,500 in dealer and customer incentives, Potamkin Dodge is selling Monacos for $8,995.

Bricklin returns, peddling used cars

By Edward Lapham
MANAGING EDITOR

Malcolm Bricklin is back. This time as a used-car salesman.

Bricklin, who gave America the Subaru, the Yugo and the Bricklin gullwing sports car, has a new plan to refurbish and sell used cars on a 50-acre site in Phoenix, known as the Auto Ranch. After a two-year hiatus from the limelight, Bricklin has developed a remanufacturing and marketing concept called New Experienced Cars.

Bricklin said the remanufacturing part of the plan will include an assembly line-like operation at the Auto Ranch handling a minimum of 100 used cars and trucks per day. All cars will get new tires, battery, belts, hoses and shock absorbers.

The marketing part of the concept includes a computerized showroom complete with the 3-D, holographic Magic Theater that Bricklin had planned to make a centerpiece of his abortive plan to acquire 1,000 dealerships.

The entrepreneur said the current venture is a natural outgrowth from that last planned enterprise.

"There are two reasons that it didn't happen," Bricklin said. "The manufacturers didn't want the franchises clustered, and car dealers wanted to be paid for yesterday's profits, not today's profits."

Bricklin said he has completed a private placement offering that raised $60 million to fund the Phoenix Auto Ranch, although he refused to disclose the identity of the investors. He said if the Phoenix operation is a success he could develop as many as 50 in the United States — by himself (with his current investors), in joint ventures or with franchisees.

Bricklin said the New Experienced Cars sold at his Auto Ranch will carry a two-year warranty that coincides with a two-year guaranteed buyback program to keep his customers coming back.

He said warranty work can be performed at any of the 5,200 Goodyear Tire & Rubber Co. retail service outlets in the United States.

His plan also calls for Phoenix banks to provide retail financing through the Auto Ranch. Bricklin said his $60 million capitalization includes allowances for $10 million in working capital, about $8 million of which will be needed to floorplan his inventory.

Bob Pratt, Goodyear's consumer products region manager, said he has been talking to Bricklin about this project for a year. "It's one helluva concept," Pratt said.

Pratt said Goodyear will be involved only as a supplier. The company will supply the tires, belts, hoses and shock absorbers that will be fitted to the cars at the Auto Ranch. Goodyear will establish a no-cash repair account so Bricklin's customers can have warranty work performed at any Goodyear service outlet, Pratt said.

Bricklin said he is about 14 months away from the grand opening of the Phoenix Auto Ranch.

Bricklin said he has paid off an IRS lien on his Meeker, Colo., ranch and is resolving other litigation, some of which was filed against Bricklin by denizens of Meeker.

Bricklin caused a stir in 1988 when he sold his share of Global Motors and announced he would develop a youth camp on the ranch near Meeker. Like the failed plan to build Global Motors into a powerhouse importer of makes from several countries, and the abortive scheme to acquire 1,000 dealerships, the camp never happened.

"I'm selling the ranch," Bricklin said when asked about the youth camp last week. "As it turns out this was the perfect place to develop the Auto Ranch idea," he said. "But it's time to get back to civilization so I'm moving to Phoenix to get the Auto Ranch going."

Correction

A late news item by The Associated Press in the March 25 issue said Ford Motor Co. would not offer its 1992 Crown Victoria and Mercury Grand Marquis models for fleet sales.

Ford spokesman Larry Weis said those models will be available to fleets.

FLEX TIME

Traffic, labor problems may prompt changes in Japan's just-in-time ways

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — In another indication of the toll of traffic congestion and labor shortages on Japan's just-in-time delivery system, Nissan Motor Co. said last week that it is considering doubling its lead time on parts orders from suppliers.

Nissan, Japan's second-biggest producer behind Toyota Motor Corp., said the increase, to 96 hours from 48 now, would allow suppliers to stockpile less inventory to meet Nissan's demand for parts. The action, if taken, would be the most explicit statement yet by a Japanese carmaker that just-in-time may be evolving into a "just a little later" system under the pressure of crowded roads and social change in Japan.

Just-in-time delivery, a cornerstone of Japan's cost-efficient approach to automaking, allows producers and suppliers to maintain output without stockpiling expensive inventory.

But the system, which requires precisely timed, round-the-clock deliveries to factories, has been under attack in Japan recently because of the pollution and traffic congestion it adds to the country's already choked streets and highway systems.

In addition, suppliers and producers alike have found it increasingly difficult to find truck drivers amid Japan's mounting labor shortage.

Toyota, which has normally dealt with suppliers concentrated in the Toyota City area, says it also will have to stretch deliveries when it opens up new plants in northern and southern Japan in the next two years.

"That may require more inventory in the system" and, perhaps, a new transshipment facility between Toyota City and the new plants, said Mikiya Soyama, deputy general manager of the carmaker's Industrial Affairs Division.

"But that does not mean any change in the just-in-time philosophy," he said. "It is still a matter of keeping inventory at a minimum."

Since the system was originally developed at Toyota by Taiichi Ohno and Kiichiro Toyoda, Toyota particularly is concerned about defending the process.

"Even Ohno foresaw these problems," such as traffic jams and a labor shortage, when he first established the system, said Atsushi Noda, assistant manager in the Business Environment Research Department.

According to Noda, Ohno foresaw that these problems would develop when people only carry out the system "half way."

"What you are seeing is people who have only taken the top of the idea and have not followed through," he said.

Soyama stresses that just-in-time is "a philosophy," not a rigid system.

"It is not written in concrete; it is flexible," he says. The purpose, he said, is "to maintain high quality, at low cost, with the shortest lead time." When problems arise, companies can adjust the small lot production, the minimum inventory, or the timing of the *kanban* ordering system, he said.

The goal is to reduce waste in every aspect of production.

Both Nissan and Toyota say they adjust the delivery process constantly, and both have made attempts to make sure delivery trucks are filled to capacity.

Cartoonist roasts Iacocca for switch on air bags

Minivan owner Trudeau questions new attitude

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Lee Iacocca's visit to the White House raised eyebrows and infuriated some.

Not Iacocca's visit to George Bush's White House in March 1991. But a visit to Richard Nixon's White House in April 1971.

Iacocca, who gained national press attention last week for seeking protection from Japanese imports from the Bush administration, made a visit to the Oval Office 20 years ago that also placed him at the heart of an industry controversy. Echoes of that historic meeting with Nixon are reverberating today.

Chrysler shops parts of Acustar, Page 41

In 1971, Iacocca, then president of Ford Motor Co., and Henry Ford II had a 37-minute meeting with President Nixon. Consumer advocates claim that meeting, which remained a secret until 1982, altered the course of vehicle safety developments in the United States.

Safety advocates claim that Iacocca did most of the talking at the meeting. And when he was finished, he had persuaded Nixon to quash pending federal regulations mandating air-bag installation in U.S. passenger cars. With the government decree lifted, the industry turned its back on air bags and embraced other forms of passive restraints.

Two decades later, Iacocca has become the industry's standard bearer for air-bag safety. Chrysler Corp. has poured millions of dollars into advertising the safety advantages of the inflatable restraint, and Iacocca himself has conveyed the message on the airwaves and in newspaper pages.

Chrysler in 1988 became the industry's air-bag leader when it announced plans to begin installing driver-side air bags as standard equipment on several passenger-car lines. By the 1990 model year, all Chrysler-engineered cars built in the United States had driver-side bags as standard equipment.

And today, Iacocca talks of reading the letters of heartfelt thanks received from drivers who claim "a Chrysler air bag saved my life."

What's going on here?

That apparently is the question that occurred to political cartoonist and satirist Garry Trudeau. Minivan owner Trudeau lampooned Iacocca and his air bag turnabout in a national cartoon strip scheduled to run March 31.

Iacocca's own words on air bags are plentiful, colorful and great fodder for satirists.

G. B. TRUDEAU
MAYBE I SHOULD OFFER A COMMENT HERE...
WHAT, AM I NUTS?
A LOT OF PEOPLE SAID IT COULDN'T BE DONE!
THEY SAID NOBODY PUTS AIR BAGS IN MINIVANS! IT'S TOO TOUGH TO ENGINEER!
CHRYSLER SAYS, SO WHAT IF EVERYBODY ELSE WANTS TO WAIT!
SOME THINGS YA WAIT FOR! PASSENGER-SIDE AIR BAGS IN MINIVANS? OKAY, YA WAIT FOR THOSE. DRIVER-SIDE AIR BAGS? YA DON'T WAIT!
BUT, CHAIRMAN IACOCCA — YOU WAITED FOR 18 YEARS! NOBODY IN THE INDUSTRY FOUGHT AIR BAGS HARDER! AND YOU LED THE CHARGE AGAINST STRUCTURAL SAFETY STANDARDS FOR MINIVANS! WHAT GIVES HERE?
CUT!
WHAT? WHAT? WOULDN'T A BOARD MEMBER TAKE HIM ON?
ACTORS!

Recent Chrysler television commercials set in the company's boardroom were parodied in cartoon strip published last weekend.

> Everybody changes their mind about certain things over time. That's not a crime. It's a sign of an intelligent person. Mr. Iacocca is as big a believer in air bags as there is today.
>
> Chrysler spokesman

There is Iacocca circa 1984 in his best-selling autobiography: "There are those who believe that air bags are the answer. I disagree. I've been speaking out against them since they were first developed almost 20 years ago. I sometimes have the feeling that when I die — and assuming that I go to heaven — St. Peter is going to meet me at the gate to talk to me about air bags."

At that time a proponent of mandating seat-belt use, Iacocca then recites a litany of air bag woes: "Air bags can be dangerous. There's always the possibility that the air bag will not inflate when it should, or that it will inflate when it shouldn't . . . The whole business is a paradise for product liability lawyers . . . Sodium azide isn't the kind of chemical I want to be riding around with . . . Air bags are one of those areas where the solution may actually be worse than the problem."

Then there is Iacocca circa 1991: "Some things you wait for. Some things you don't. Minivans with air bags? You don't wait."

Or Iacocca circa 1988: "I had my doubts about air bags, but today's new technology made me a believer. You won't hear any more beefs about air bags from me."

States a Chrysler spokesman: "Everybody changes their mind about certain things over time. That's not a crime. It's a sign of an intelligent person. Mr. Iacocca is as big a believer in air bags as there is today. He considers himself a zealot when it comes to air bags."

In fact, while Iacocca may have gotten religion on air bags, history notes that the conversion began because of the federal government.

In 1984, former Secretary of Transportation Elizabeth Dole ordered U.S. vehicle manufacturers to phase in passive restraints in passenger cars by September 1989. The restraints could be either air bags or automatic seat belts.

The Transportation Department later extended the passive-restraint deadline if makers stepped up efforts to install driver-side air bags.

Chrysler officials in the past have indicated the federal regulations were initially the driving force behind the company's accelerated air-bag installation. The company's market research indicated consumers preferred air bags to motorized belts.

So Chrysler invested an estimated $200 million in its air-bag program to make the system standard on its passenger cars and in the process created a safety marketing advantage the company continues to mine.

Mid-March sales fall 15.4 percent

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Car and truck sales remained slow in mid-March, despite an apparent rebound in consumer confidence following the Persian Gulf war. To summarize the view of some analysts, the consumer's state of mind might best be described as, "I feel better now that the war is over, but I still don't have any money."

Honda Accord sells again, Page 42

On a daily-selling-rate basis, combined sales of cars and trucks declined 15.4 percent in the March 11-20 period. The figure is based on actual totals from some companies and *Automotive News* estimates of others. There were nine selling days in the period this year vs. eight in 1990.

Total sales in mid-March were 350,357 cars and trucks, down 4.8 percent from last year.

In the 10-day period, 179,953 North American-built cars were sold, a 1.7 percent gain over the shorter 1990 span. Domestic truck sales fell 2.9 percent to 103,613, despite this year's extra selling day.

Domestic car and truck sales combined were virtually even with last year, at 283,566.

Sales of imported cars and trucks, including estimates, fell 20.8 percent, at 66,791. Cars

Ford considers merging powertrain units

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is studying a plan to consolidate its three powertrain divisions as part of the company's $1.5 billion cost-cutting program.

The proposed plan calls for the merger of the Transmission and Chassis, Engine and Casting divisions, sources in each of the divisions confirmed.

The sources say a study is under way to determine how much money can be saved and how the consolidation can best be implemented. Results of the study are due the first week of June.

"This is a major reorganization," said a source in the Transmission and Chassis Division. "Some positions will be combined and some will be eliminated."

Sources say they believe the company wants to combine the three divisions into a single unit.

"The company is looking for cost improvements and more efficiency," said an employee in the Casting Division. "This is a major move, and on the basis of (poor) car sales, they want to do it as soon as possible."

The Casting and Engine divisions have been consolidated twice before, according to the Casting Division employee.

The Transmission and Chassis Division, largest of the three, is headquartered in Livonia, Mich., and operates seven plants, said Ford spokesman Jay Meisenhelder. He said 15,630 employees work at the plants and 1,200 at the general office.

The Engine Division employs 11,800 at eight plants and 1,200 at its headquarters in Dearborn, Mich., Meisenhelder said.

Casting has 5,200 employees at four plants and 200 at its Dearborn offices.

Each has a general manager.

Engine is headed by Robert Transou, who assumed his new position April 1. Robert Adams leads Transmission and Chassis, and George Booth is general manager of the Casting Division.

The internal Ford sources say they don't know yet how the reorganization will fall into place but believe most of the cuts will come at the expense of the salaried employees within each division.

Ford Chairman Harold Poling has said the company needs to trim salaried costs 10 percent by the end of the year.

Meisenhelder says a reorganization of the three divisions "at this time is nothing more than a possibility."

"We're looking at organizational efficiencies all of the time," he said.

Ford started taking steps to integrate the three divisions last September. That's when Max Jurosek took over the newly created position of vice president and general manager of Powertrain Operations.

All three divisional general managers report to Jurosek under the new structure, which is designed to improve the relationship of the powertrain to the total vehicle.

Recession bites into the Big Apple; few show debuts

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The recession hung like a black cloud over the 1991 New York International Automobile Show.

With only two U.S. debuts — the Acura Vigor and Mazda MX-3 — the show was short on product introductions. And while the economy and industry sales slump clearly was on the minds of auto executives, several speakers said things could be turning around.

General Motors President Lloyd E. Reuss, noting a rebound in consumer confidence, said GM sales will might end up dropping "only 5 to 10 percent" compared to last year. Through February, GM sales had fallen 21.9 percent.

Geneva
New York

William Bruce, vice president and general manager of Nissan's Infiniti division, expressed hope that luxury car sales will recover this spring to pre-war and pre-recession levels. That would assume the economy improves and the luxury car market bounces back after pulling sales ahead into late 1990 to beat the Jan. 1 luxury tax.

Bruce: hopeful for luxury rebound.

Elliott: Honda revises '91 goal.

Tom Elliott, executive vice president of American Honda Motor Co. Inc., noted that Honda cut back its U.S.-bound production because of the economy. Last September, the company expected to sell 900,000 cars in the 1991 calendar year, said Elliott. Now the goal is to exceed last year's 855,000 Honda and Acura sales, he said.

But the recession did make it easier to pitch the idea that 1980s-style conspicuous consumption is "out," and cheaper cars are "in."

Along those lines, Tom Ryan, vice president of marketing at Hyundai Motor America, showed the company's 1992 Elantra model, to be introduced later this year for "well under $10,000."

Ryan didn't use the term "yuppie," but he said the Elantra is supposed to appeal to "young, white-collar, college-educated, family-oriented" people.

"Now, we are in a decade where those people are more conservative and responsible with their money and with their purchases."

Chris Wackman, vice president of marketing for Subaru of America, used similar logic in explaining why adding standard air conditioning and power accessories at a reduced price boosted sales of Subaru's aging Loyale line for 1991.

"There's a definite move toward value," Wackman said.

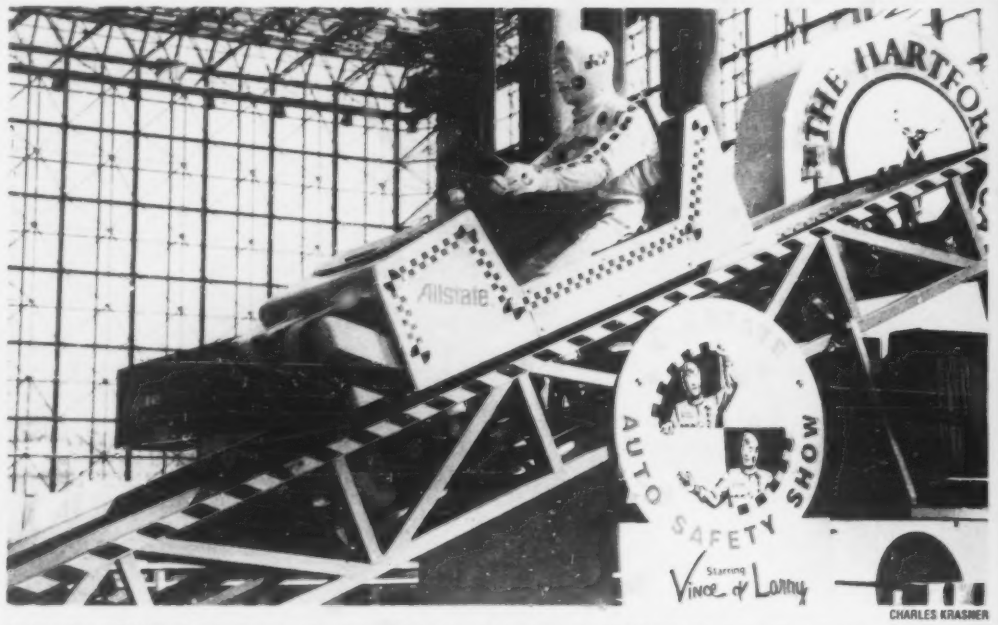
"When you looked at the '80s, it was the decade of conspicuous consumption, and conspicuous consumption was good. The '90s don't seem to be that," he said.

Other New York show news:

- Acura expects to sell between 18,000 and 20,000 of its new Vigor models this year. In calendar year 1992, sales are expected to fall between 24,000 and 30,000 units. The new five-cylinder sedan goes on sale this monthin the $23,000 to $26,000 bracket, Acura said.
- Volvo Cars of North America unveiled the "Volvo Saved My Life Club" for people who say their Volvo saved lives in accidents.

"We get thousands of letters from people who say that what made the critical difference was the Volvo automobile," said Joseph L. Nicolato, president and chief executive officer. He made it clear he's sick of Lee Iacocca bragging about the lives Chrysler Corp.'s air bags have saved.

- Hyundai Motor America is adding a Special Edition (SE) trim level for its Excel GS 3-door, Excel GL 4-door, Scoupe, Sonata and Sonata GLS V-6 models.



CHARLES KRASNER

In keeping with the show's themes of safety and a clean environment, the Allstate Insurance Co. display featured crash-test dummies Larry and Vince from popular public-service advertisements.

BE A WINNERS CIRCLE

BOBBY UNSER & ANGLO AMERICAN
THE CHAMPIONSHIP TEAM

ENTER ANGLO AMERICAN'S WINNERS CIRCLE WEEKEND PROMOTION, AND YOU COULD BECOME THE PERSONAL GUESTS OF ANGLO AMERICAN AND BOBBY UNSER AT THIS YEAR'S INDY 500!

Every dealer who visits an Anglo American auto auction in the month of April is automatically eligible to become a Winners Circle Weekend V.I.P.

A winner will be selected from each of our auctions; maybe you and a guest will be among the lucky 48 Winners Circle Weekend V.I.P.'s!!

Each Winners Circle Weekend Package includes:
Roundtrip airfare for two, between the auction city and Indianapolis.
Luxury accommodations at the Omni Severin Hotel.
Two tickets to the Indy 500 with motorcade escort to the race.
Tickets to flagship Indy 500 events.
Limited Edition Winners Circle V.I.P. racing jackets.
Special photo opportunities with Bobby Unser, 3-time Indy winner!

Contest period runs from April 1 thru April 26, 1991.

Drawings will be held the week of April 22 at each Anglo American auto auction.

No purchase necessary.

SERVICE MANAGEMENT

Toyota suppliers a key component of long-term strategy

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — Toyota Motor Corp. invests billions of dollars in manufacturing plants and research and development facilities.

In addition, Toyota also invests heavily in supplier firms to build a world-class network of suppliers to assure its future success in the American market.

In outlining the relationship between Toyota and its suppliers, Richard J.Gallio, vice president of parts, service and U.S. products for Toyota Motor Sales U.S.A. Inc., said suppliers are an integral part of the automaker's production system, not only in Japan but also the United States.

In most cases, Gallio said, suppliers are treated as a partner in Toyota's long-range strategy.

Business relationships between both parties are intended to be long term and mutually beneficial.

Gallio's responsibilities include coordination and communication with Toyota and all North American manufacturing plants to enhance product quality. He also is responsible for the development and procurement of all U.S. products, accessories, replacement parts and vehicle conversions, as well as development and implementation of all parts and service programs.

Gallio told a meeting of the Automotive Service Industry Association that Toyota's relationships with suppliers go hand-in-hand with its concept of Total Quality Management — a philosophy that is an important reason why the automaker has been so successful.

Citing examples of how Total Quality Management has been made a part of Toyota's corporate culture, Gallio said it's best explained by a relentless dedication to continuous improvement; one of never being satisfied with the current situation; and continually trying to do the little things better and better.

He noted that in 1990, two million suggestions were received by Toyota from employees worldwide; 97 percent were implemented.

"Total Quality Management also means applying just-in-time production techniques across the board to parts as well as vehicles," Gallio said, "and measuring quality in parts per million and perhaps soon in parts per billion.

"It also means building the very best and giving every customer what they want," he added, "and then raising customer expectations by giving them even better products than they were demanding."

This approach, Gallio said, actually proves more efficient. He noted that Toyota requires an average of 13 man-hours to assemble a vehicle versus 19 to 22 man-hours for Honda, Nissan and Ford.

"Our Lexus LS400 matches Mercedes-Benz quality, but Lexus requires only one-sixth the man-hours to assemble," he said. "Think of what this means not just for market share but also profitability."

To serve customers in today's market, manufacturers need to listen, Gallio told the meeting.

"Find out exactly what they really want, find out what they're not happy with and act upon it," Gallio said. "At Toyota, our goal is to look at every system and at every process, and to create a competitive advantage, all based on customer satisfaction."

> Our Lexus LS400 matches Mercedes-Benz quality, but Lexus requires only one-sixth the man-hours to assemble. Think of what this means not just for market share but also profitability.
>
> **Richard J. Gallio**
> Toyota vice president of parts, service and U.S. products

Gallio said customer satisfaction and customer retention will clearly be Toyota's marketing strategy for the 1990s. The automaker knows that its 10 million Toyota owners are its biggest asset and that they hold the key to the company's future success.

What does all this mean for Toyota's suppliers?

"Well, simply stated, because of Toyota's dedication to customer satisfaction," Gallio said, "our suppliers must understand and respond to Toyota's needs, as well the needs of our customers.

"Therefore, suppliers must be world-class in cost, quality and delivery," he said. "And they must be capable of becoming an extension of Toyota in both performing research and development, as well as practicing day-to-day teamwork."

Some of the ways Toyota shares its dedication to quality with its U.S. parts and accessory suppliers, under its Supplier Development Outreach Program include:

- An annual supplier seminar that offers workshops and facilitates on-going dialogue with the suppliers.
- A program that invites selected suppliers to Japan to see the Toyota production system in operation and to talk with some of the automaker's Japanese suppliers.
- A pair of week-long Total Quality Manangememt seminars — one for senior management and a second for operating managers.

Also last year, Toyota launched its first full-scale production system training project for suppliers in the United States.

"Projects like this are a major undertaking," Galio said, "but they demonstrate Toyota's commitment to quality and continuous improvement."

In addition to expanding business with U.S. suppliers, Gallio said Toyota's goal is to help them become original-equipment suppliers to the three Toyota plants in North America and to Toyota in Japan.

By the mid-1990s, Toyota's goal is to sell 1.5 million vehicles annually in the United States, with close to half of them built in North America, and to source half of its parts and accessories in the United States as well.

"The opportunities are growing rapidly," Gallio said. "Local content at the three North America plants is moving to 75 percent or more and we're looking to export billons of dollars worth of vehicles and products from the United States later this decade."

According to Gallio, the value of parts and accessories Toyota sells directly will rise to an expected $800 million by 1995 and the automaker will be doing business with 200 U.S. supplier firms.

Service index falls in Feb.

Service and parts business at new-car dealerships, which showed an increase to start the year, slowed in February as measured by the Automotive News Service Index.

Shop business for the month totaled 97.7 percent of the amount posted in February 1990. But a year ago, the index was up 13.6 percent from February 1989, the third month of what was to be a six-month string of increases.

In January, the index rose 2.4 percent over a year earlier.

A number of respondents singled out the Persian Gulf war and the recession as negative influences on their February business.

The decline came amid increased advertising of parts and service by dealers working to offset the continuing plunge in new-car sales.

Among the individual indicators, shop parts sales rang up the largest gain, topping the previous year by 7.3 percent. Total labor sales inched up 2.8 percent, and gross profit on all labor and parts and accessories sales rose 1.9 percent.

On the negative side, sales of all parts and accessories tumbled 6.9 percent. The number of repair orders written was unchanged from February 1990.

For the first two months of the year, only parts and accessories sales were down from 1990, declining 2.8 percent. Service business for the year to date was virtually the same as that of a year ago.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealers.

SERVICE INDEX
97.7*

	Feb. '91 vs. Feb. '90	Jan.-Feb. '91 vs. Jan.-Feb. '90
Gross Profit on All Labor and P&A Sales	+ 1.9%	+ 2.3%
Repair Orders Written	0.0%	+ 3.1%
Total Labor Sales (Customer & Warranty)	+ 2.8%	+ 4.2%
Shop Parts Sales (Customer & Warranty)	+ 7.3%	+ 6.4%
Sales of All P&A	− 6.9%	− 2.8%

* Survey by Automotive News shows that dealers' service and parts business in February 1991 was 97.7 percent of business in February 1990. Service business in the first two months of 1991 was 100.1 percent of business in the corresponding period in 1990.

Natural gas refueling directory available

The American Gas Association expects four million natural gas vehicles to be on the road in 2005.

The current refueling infrastructure will have to grow considerably to make those vehicles practical for consumers.

Today, there are only about 325 natural gas refueling stations in 40 states and the District of Columbia. About one-third of those are currently open to the public or available through arrangements with the operator.

To find those stations, interested parties can send $6) to the association in Arlington, Va., for the *Directory of Natural Gas Vehicle Refueling Stations, Products and Services.*

SERVICE BRIEFS

Goodyear adds TDD line

AKRON, Ohio — Goodyear has added a telecommunications device for deaf and other hearing- and speech-impaired customers. The device, known as a TDD, includes a keyboard to transmit and receive messages via telephone lines.

By dialing (216) 796-6065, customers with a TDD can ask questions about Goodyear tires and services with customer representatives at the company's Assistance Center. Hearing customers can contact the center at 1-800-321-2136.

Carquest merging units

RALEIGH, N.C. — Carquest Corp. will merge its General Parts Inc. and Indiana Parts Warehouse distribution companies into a single unit on April 26. The new company will use the General Parts Inc. name.

With the merger, General Parts Inc. will operate 13 distribution centers serving Carquest Auto Parts stores in 23 states.

Import tests are popular

DIAMOND BAR, Calif. — The Auto International Association says more than 1,500 of its Import Parts Specialist certification tests have been purchased over the past year.

The test covers such knowledge as understanding of air and water-cooled engines, car manufacturers, national origin of vehicles and part numbering systems. Test copies have been purchased in bulk by companies such as Import Parts America, Lazorlite and Beck/Arnley World Parts. For a copy of the test, call Bonnie Imsland at (714) 396-0289, ext. 113.

New hydraulic fluid bows

MEMPHIS, Tenn. — An environmentally safe hydraulic fluid developed from a vegetable oil for operation of new and old lifts has been announced by the Rotary Lift Division of Dover Industries Co.

According to the company, the non-toxic Rotary Hydraulic Bio-Fluid is said to meet all current industry recognized requirements of environmentally safe fluids accepted by the EPA. Distribution of the fluid started March 1.

Along with the environmental standards, the fluid, four years in development, provides excellent anti-wear, anti-foam, anti-rust and film strength for in-ground and surface lift hydraulic systems, the firm said.

Merger talks hit snag

CHICAGO — In order to give both groups a chance to further examine unresolved issues, the Automotive Service Industry Association and Automotive Parts and Accessories Association have ended talks of a proposed merger.

The chairmen of the associations — Gene Gardner, DuPontCo. planning, quality and productivity director, and Jim Thomas, Maremont Exhaust Products Co. president — said the associations have agendas and priorities that make it difficult for a merged association to achieve its aims with maximum effectiveness.

Both executives said a dialogue would be maintained between the two trade groups.

Glass alliance formed

NORTHBROOK, Ill. — Sears Roebuck and Co., Allstate Insurance Co. and The Globe Group have formed an alliance to offer nationwide automobile glass repair and replacement services through more than 250 automotive and light-truck service centers.

The service, called Autoglass by Sears, is an association between Sears and the newly created subsidiary of Globe called AutoComp Services Inc. Allstate is the first national client for the service.

Globe will manage and operate Autoglass by Sears at service bays in Sears service centers. Globe also does business as U.S. Auto Glass Centers Inc., USA-GLAS Network and Globe Glass & Mirror Co.

Troubleshoot entries up

ORLANDO, Fla. — Nearly 14,800 students — twice as many entrants as last year — will compete for $1.2 million in scholarships and prizes in the Plymouth-AAA Troubleshooting Contest.

Sponsored jointly by Plymouth and the American Automobile Association, the contest involves 1,853 high schools and vocational programs at the state level. State winners receive an expense-paid trip to Washington with their instructors for the national finals June 17.

In the hands-on testing at the state and national levels, two-member teams compete against each other and the clock to find and repair deliberately bugged 1991 Plymouth cars.

MEXICO

FROM PAGE 1

tically support free trade with the country.

But treaty or not, Mexico is steamrolling forward.

Although the Mexican vehicle market is still about 1/25th the size of the U.S. new-vehicle market, sales in Mexico have been leaping by an average of 30 percent a year since 1988. Last year, sales of Mexico's Big 5 automakers totaled 527,296 cars and trucks, up from 240,000 in 1987. This year, forecasters see sales of about 625,000 units. In another five years, sales are expected to top 1.5 million units annually. More optimistic calculations see the market eventually swelling to 5 million units a year.

That's good news for Detroit's automakers, who collectively account for more than half of Mexico's car and light-truck sales.

Imports into Mexico have gotten a boost too, thanks to Mexico's lifting of a ban. They reached 9,500 last year.

Big 3 opportunity

For once, U.S. carmakers may have a better shot at the bonanza than most of their aggressive Japanese competitors.

Not only is the market sitting in the United States' proverbial back yard, but each of the Big 3 has a longstanding business relationship in place, points out James P. Womack, a professor at the Massachusetts Institute of Technology's Center for International Studies and a trade consultant to the Mexican government.

"Where else can U.S. carmakers look right now to pick up as many as 4.5 million new car sales a year?" Womack asks.

As if that scenario weren't rosy enough, industry observers also are touting Mexico as a vital low-cost production base for profit-squeezed North American carmakers.

The Big 3 are already building and exporting Mexican cars, as are Germany's Volkswagen AG and Nissan Motor Co. Ltd. of Japan. But with the proposed free-trade agreement, Mexico could become a swarming center of car production, with new factories aimed at the U.S. and Canadian markets. Companies ranging from VW to dozens of U.S. and Japanese partsmakers already are sinking billions into new factories there.

Mexican exports to the United States have increased five-fold over the past five years, hitting an estimated 260,000 vehicles last year. Victor Barrionuevo, Mexican industry analyst with the U.S.-based WEFA Group in Monterrey, Mexico, predicts exports to the U.S. market this year will probably reach 314,000.

Current or recent plant expansions by VW, Ford and Nissan should increase export capacity to 550,000 cars and trucks by 1992 — and that's before opening the floodgates of free trade.

Unionized Mexican autoworkers still earn a fraction of what their counterparts north of the border take home, and parts factories typically pay workers about $1 an hour. The cost savings could enable manufacturers to produce entry-level vehicles cheaply enough to throw the East Asian competition for a loop.

Investment abounds

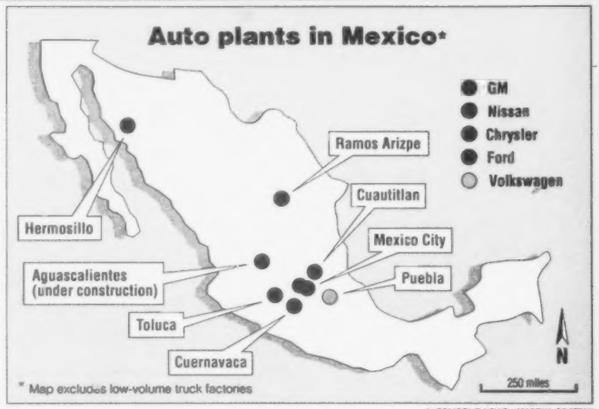
In response to rising interest in Mexico, the Mexican Trade Commissioner's office in Chicago estimates that as many as 200 automotive companies are now looking into Mexican opportunities.

"We don't know where the limit is, frankly," admits Ford's Scheele. But Ford and its competitors are eager to find out.

- Ford recently announced plans to spend $700 million to double the capacity of an engine factory in Chihuahua that will mean exports of about 500,000 engines a year to U.S. plants. That follows the $750 million Ford spent to expand its Ford Escort/Mercury Tracer plant in Hermosillo last year. All of that plant's annual capacity of 170,000 cars are targeted at the United States. The company has invested almost $2.75 billion in Mexico in the past 10 years.
- Volkswagen closed its only U.S. assembly plant two years ago and has since declared Mexico its North American production base. It is currently spending about $500 million at its Puebla complex to expand production capacity enough to supply its entire Mexican market and the United States and Canada with Golfs and Jettas.

Locally produced VW Beetles — the best-selling car in Mexico — retail for a mere $5,000. VW maintains an industry-leading 38 percent share of Mexico's car and truck market, and is expanding from a capacity of 57,000 three years ago to more than 300,000 by 1992. Half could be exported.

- Nissan is spending $1 billion on a new plant in Aguascalientes set to open in 1992. It will initially build 120,000 Sentras annually for Mexico, Canada, Latin America and probably the United States. Nissan also has enhanced its Cuernavaca engine plant to export truck engines into its U.S. assembly plant.
- Chrysler Corp. has produced vehicles in Mexico since the 1940s, and last year built 73,080 cars and trucks for export to the United States. The company declined to discuss its outlook for the market, saying it is "too sensitive of an issue right now."
- General Motors built 40,003 cars for export to the United States last year. In addition, the company now operates 26 component plants in the country.



AUTOMOTIVE NEWS / MARTHA GRATTAN

Caution is watchword

Officials from the Big 3 are reluctant to appear eager over Mexico, largely because of their sensitive relationship with organized labor in the United States and Canada.

Creating jobs in Mexico is fine, points out Stephen Beckman, international economist with the UAW. Moving jobs from the United States is a problem.

GM spent much of 1990 under a cloud created by the movie *Roger & Me*, which chastised the corporation for pulling production out of Flint, Mich., and moving factories to Mexico in the 1980s.

The politics that will be involved if the Big 3 begin adding production in Mexico now, while North America is still glutted with underutilized factories and laid-off UAW members, could be costly for the carmakers. Such tensions are already holding up trade talks in Washington.

Political pressures

The Bush administration wants "fast-track" authority to negotiate the free-trade agreement with Mexico and Canada. That move would effectively prevent Congress from tinkering with a proposed treaty and is now under political fire on various fronts.

President George Bush and Mexican President Carlos Salinas de Gortari would like an agreement by year's end.

The UAW — believing it has already lost 75,000 jobs to Mexico and stands to lose many more — would like to stop the whole Mexican fiesta.

The Canadian Auto Workers also have decried the proposed free-trade agreement, regardless of whether it includes Canada or not.

But a new study published by the Washington-based U.S. Council of the Mexico-U.S. Business Committee disputes the idea that U.S. and Canadian plants will shut down and be replaced by Mexican factories. The study suggests that a free-trade deal could create at least as 400,000 jobs in the United States during its first five to six years. Further, the new arrangement would spur investment of at least $25 billion initially, with some $18 billion of that returning as new sales for U.S. firms, according to the organization.

MIT's Womack contends that increased Mexican production by the Big 3 would actually benefit organized labor north of the border. Under a free-trade agreement, the Big 3 would most likely use Mexico as a stage for building its own low-end cars again, predicts Womack. Those low-end cars already are largely produced outside the United States by the Big 3's Asian partners, but with no role for American union members.

"Those are the cars that would most likely go to Mexico," Womack reasons. "And who would benefit? It would be the U.S. and Canadian component manufacturers who would begin supplying them. It would be the Big 3, who would reclaim that segment of the market. It would be the UAW, who would see more profits pumped into the more expensive car lines that they build."

Other world producers could also find Mexico attractive in the 1990s. Daihatsu Motors Ltd., a Japanese carmaker that has been limited by the Japanese government from increasing its U.S. exports, has been longing for a North American assembly plant. Korea's Daewoo Motor Co. Ltd. also recently announced that it wants to build a North American manufacturing base.

No signs yet

Why, if manufacturing is potentially so cheap in Mexico, haven't the Big 3's Mexican-made vehicles already swamped the United States?

Labor costs are not the only factor to consider. Labor typically represents less than 20 percent of a car's total production expense. Slashing that cost would give assemblers an edge in the market, as would further savings from Mexican-made subcomponents. Research from MIT's International Motor Vehicle Program indicates that it costs GM $625 less to deliver a Celebrity, which had been made in Mexico, to U.S. dealers than one from its Oklahoma City plant. But the cost benefits so far haven't translated into radical showroom price cuts.

Womack offers another answer. The Big 3 are seeing only modest benefits from their Mexican imports, he contends, because they have only partially embraced a Mexican production strategy. Given the new freedom of a free-trade agreement, he predicts, they will eventually have to adopt a fully integrated Mexican production strategy to remain competitive in the U.S. market.

"It isn't going to work as long as Ford just builds some Escorts in Mexico for the U.S. market, and

String of five government decrees steers industry down bumpy road

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — The Mexican auto industry's development since Ford Motor Co. established the first assembly plant in Mexico nearly 60 years ago has been erratic.

In August 1962, in the first of five government decrees that have controlled the industry for 29 years, Mexico announced that within two years 60 percent of all vehicles sold in Mexico had to be fitted with components supplied by Mexican-based manufacturers. Imported engines for passenger cars and trucks were banned in September 1964.

The result was what the government wanted: a mass exodus of a wide variety of companies such as Volvo, Austin, Peugeot and Fiat. Mexico was left with Ford, General Motors and Chrysler. The last two had set up plants about a decade after Ford opened its first Mexican plant in 1932.

The Big 3 were eventually joined by Nissan, Volkswagen, Renault, American Motors and Borgward, which had been bought by the Ramirez Group of Monterrey in northern Mexico with some help from the Mexican government.

Borgward survived for only a few years. By 1986, American Motors and Renault were gone, too.

A second government decree, in October 1972, mandated that components manufactured by the Mexican parts industry be used in all Mexican-made vehicles, on condition they cost no more than 25 percent more than imported parts.

After an inconsequential 1977 decree, a 1983 decree restricted each manufacturer to three lines of passenger cars and seven models in the 1984 model year, two lines and five models in 1985 and 1986 and one line with five models in 1987.

The restrictions were removed in the fifth and most recent decree, published in December 1989. For the first time in three decades, Mexico was opened to imports of new vehicles.

For every dollar's worth of imports, automakers already established in Mexico must export $2.50 worth. The export requirement will drop to $2 for every dollar in the 1992 and 1993 model years and to $1.75 per dollar in the 1994 model year.

It had been assumed that the market would be open after that. But in its 1990 annual report, the Mexican Automotive Industry Association said it would be wrong to draw such a conclusion. The situation is still unclear.

The makers have an import quota not exceeding 15 percent of domestic market sales in the 1991 and 1992 model years and 20 percent in 1993.

With $4 billion slated for investment in building and expanding auto plants in the next few years, Mexico's importance as an automotive center is growing. But that promise would have been unimaginable less than a decade ago.

In 1981, the industry produced a record 597,118 vehicles, almost all for the domestic market.

A year later, peso devaluations were the order of the day, and the nationalization of the banking system killed investor confidence. By 1983, production had fallen to less than half the 1981 total.

Seeds of a turnaround were sewn in the second half of the decade when Mexico began to renegotiate its debt and the country joined the General Agreement on Tariffs and Trade.

All work, little pay

At VW Mexico, an autoworker's life can mean no car, no phone, no soccer

By Stephen Downer
STAFF CORRESPONDENT

PUEBLA, Mexico — Like most of the 17,000 hourly workers at the giant Volkswagen assembly plant here, Jose Gomez Moctezuma rides one of the company's buses to work. He does not own a car.

He is single and lives rent-free with his parents, three brothers and a sister in the Colonia Pino Suarez, a working, middle-class area of Puebla, his native city.

"If I had to pay rent, I would find it difficult to survive," he says.

He is 33, but the face behind the thick, green-tinted spectacles is that of a man 10 years older. He is the only member of his family employed by the German company.

For 12 years, ever since he joined Volkswagen, he has worked in the Type 2 vehicle body shop. Today, he's a solderer on the van-like vehicles.

He rises at 4:45 every weekday morning. After dressing and eating breakfast, he makes his way to the bus pick-up point. He works from 6 a.m. until 3 p.m., with a 30 minute-lunch break. Several unofficial breaks, "arranged with mates," help relieve the monotony.

He should finish at 2 p.m., but he works the extra hour to avoid weekend work. Obviously cultured, Gomez took up landscape painting three years ago as a form of therapeutic relief from the strain of his work. "It has helped me a lot," he says.

Gomez appears to dislike his job intensely. He grimaced, sighed deeply and made a negative sign with one hand when asked if he was happy.

"It's very hard. There's a lot of wear and tear on your body, hearing and sight. You're under tremendous stress all day."

Gomez nets $84 a week.

"We're exploited here," he says. "An American auto worker earns more and receives better benefits. Here, we use rudimentary tools. The company gets richer by the day, but our wages seem to shrink."

> An American auto worker earns more and receives better benefits. Here, we use rudimentary tools. The company gets richer by the day, but our wages seem to shrink.
>
> **Jose Gomez Moctezuma**
> VW factory worker

Wage increases during the past five years have averaged 15 to 20 percent a year. "But they always are below inflation," he says. "In Germany, plant workers and their wives own their own cars. They have the chance to study. Here, there's nothing like that."

Gomez is a member of one of the Mexican automotive industry's most pugnacious unions, the independent union of Volkswagen workers. In 1987, the union paralyzed the plant for 57 days in support of a 100 percent wage demand. It settled for 78 percent.

The union is different from most others in the industry because it is outside the Confederation of Mexican Workers, an arm of the ruling Institutional Revolutionary Party that has governed Mexico for 60 years.

Gomez is one of the highest paid hourly workers at the VW plant. His basic daily rate is about $15 for eight hours work. Newcomers start at $8 a day.

Several years ago, the union's directorate agreed to a restriction that would be unacceptable in many countries: After three years in office, directorate members must resign and leave the company. The result is a lack of continuity. The directorate also is open to suspicions of bribery and corruption because of its brief hold on power.

The union is highly commercial. It collects weekly dues and controls the 40 hectares (198 acres) on which the Volkswagen housing estate stands. It also arranges low-cost government credit for union members who wish to buy property there. Workers have the right to do so after a year's service with the company.

But the union does not appear interested in egalitarianism, or at least it tolerates an absence of it on the estate, which straddles the Mexico City-Veracruz highway.

On the south side of the road, 700 new condominiums with beige and brown facades impart an air of respectability that accentuates the shabbiness of the 500 terraced houses on the north side.

Average hourly compensation of automotive industry workers

Country	1981	1983	1986	1988	1989
United States	$16.94	$16.23	$19.97	$21.11	$21.51
Canada	11.58	12.65	13.38	16.56	17.74
Japan	7.61	7.83	11.80	16.36	15.65
Korea	1.40	1.68	2.00	3.41	4.92
Mexico	5.27	2.61	2.03	2.67	3.12*

AUTOMOTIVE NEWS / DAVID L. BURHANS

The south has a new kindergarten, play areas, a primary school and a technical secondary college. The north is dusty and neglected and on the verge of becoming a slum some 20 years after it was built. It is already a graveyard for unwanted Beetles.

Javier Huerta Garcia, 41, lives on the south side with his wife and six children. He started work at the plant 18 years ago as a floor washer and dishwasher. Today, he's a waiter in the executive area.

"I like my work. I've learned a lot," he says. "You meet all kinds of people — Japanese, Englishmen, Italians."

He is on the same wage scale as Gomez, but said he earns more as a waiter at private parties and receptions than he does at the plant. "My VW wage is not enough," he says.

He owns a 1982 Beetle and spends about $3,400 a year on schooling for his four children who still go to school. "I have all the basics. I'm not complaining."

Ramon Zurita Matamoros, 31, has worked at the plant for 13 years, most of the time as an engine machinist.

His basic wage is the same as that of the other two but, with a wife and three children to support, he finds it difficult to make ends meet. He works weekends to earn an extra $33 a week.

"I used to like soccer, but I don't have time to play now, what with all my work and union responsibilities," he says. Zurita is a union section delegate.

He does not own a car and has no telephone in his house, which is a 45-minute company bus ride from the plant.

"I like my work," Zurita says. "I try to do my job well, and we deserve more money. I'm always urging my colleagues to work better so we can justifiably argue for better wages and benefits."

Housing for VW plant workers is a study in contrasts. A 20-year-old section of primitive houses, left, has become a graveyard for abandoned Beetles, while across the highway, right, stands modern apartment buildings. Both estates are owned by the workers' union.

continues building most of its content in the United States," Womack argues, referring to the Mexican Escort's 78-percent North American content level. "When Mexico will become a powerful production base for the automakers is when they do it in total — cars, parts, raw material. Otherwise, they'll keep paying a lot of money on transportation, infrastructure and other costs that still reflect U.S. economics."

Trade barrier beefs

Another problem that continues to hamper U.S.-Mexican auto trade is the existing system of trade barriers. Although liberalized last November, Mexican law effectively requires importers to chose between importing cars or importing parts to build cars for export. Regulations require a company to export $2.50 in value for every $1 in value it imports; it drops to $2 for every $1 next year.

VW has no U.S. cars to import into Mexico. But Ford, GM, Chrysler and Nissan do, and must choose between importing parts into Mexico to build cars, or importing cars into Mexico to sell.

Given the current sluggish U.S. market, there is little incentive to ship more U.S.-made parts into Mexico because they would have to go into cars that would be exported, and U.S. car sales are too slow to warrant it. Additionally, Mexico imposes a 20 percent tariff on imported vehicles and 10 percent on imported parts.

"The real opportunity here is to support the growing domestic market, rather than exporting cars to the United States," offers Ford's Scheele. "Why would you want to put in new capacity to serve a market that's already glutted, as the U.S. market is?"

But with Detroit operating with most of its Mexico-directed assembly on one side of the border and its componentry on the other, it remains hamstrung in tapping new Mexican sales.

"I'd like to see the United States and Mexico pass a very liberal trade agreement," says Jerry Benefield, president and chief executive officer of Nissan's U.S. manufacturing operations. "U.S. industry could do a lot for Mexico if we could invest more freely. As it is now, doing business in Mexico is difficult because of having to work out all the trade requirements to import all the parts and materials you need."

Forging a trade pact

Industry trade groups have been confident that a free-trade deal will pass. But the deal is far from done, notes one U.S. Ford official. U.S. negotiators currently are bogged down in the international discussions of the Uruguay Round of the General Agreement on Tariffs and Trade, which was expected to conclude before now. A shortage of manpower among Washington's trade and commerce offices could sidetrack the free-trade negotiations. Bush has asked for — but not received — a two-year extension in the Mexican discussions.

Meanwhile, Congress has challenged Bush's fast-track request over issues ranging from labor to the environment to whether Prairie-state farmers will get to sell corn to Mexico's consumers. The White House maintains that it still hopes to conclude a treaty by December — a hope that is becoming increasingly unlikely.

Industry: Free-trade pact must limit use of off-shore parts

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

North American auto industry groups are largely in favor of a free-trade agreement between the United States, Canada and Mexico.

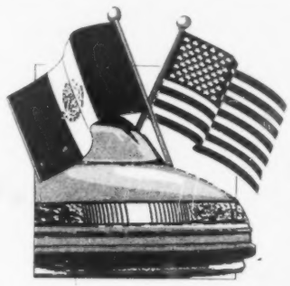
But some industry officials are concerned that if trade barriers are lifted on Mexican-made cars and parts, Japanese and European carmakers could assemble U.S.-bound products in Mexico using mainly off-shore parts.

Car makers and trade associations are urging tough "rules of origin" that would require a vehicle to contain a high percentage of North American-made parts in order to qualify for the duty-free privilege.

Volkswagen de Mexico built 45,993 cars for export to the United States and Canada last year. And Nissan Mexicana has begun shipping cars to Canada and has plans to export to the United States. Honda Motor Co. Ltd. now exports replacement body panels from Mexico. But the advent of a free-trade agreement is expected to unleash billions more in new plant investments.

"We're in favor of an agreement, but it has to contain strong rule-of-origin language," states Chris Bates, director of policy analysis for the Motor and Equipment Manufacturers Association, an 800-member parts trade group.

U.S. parts makers have lost some $10 billion in annual business with the erosion of Big 3 market share over the past decade. While a free-trade pact with Mexico is seen by many as a path toward restoring Big 3 competitiveness — and with it, Big 3 supplier competitiveness — the treaty also threatens to attract additional Japanese car production to the continent.



"Somebody is going to invest in Mexico under a free-trade agreement," comments James Womack, a professor with the Massachusetts Institute of Technology's Center for International Studies. "My only fear is that the Big 3 no longer seem to have the cash to do it."

No formal treaty has been proposed yet, but it could be modeled closely after the U.S.-Canadian Free Trade Agreement of 1989. That treaty knocks down tariffs between the two countries, eliminates restrictions on foreign ownership of business, and essentially allows a corporation from one nation to operate freely in the other.

A precursor to the free-trade deal has governed automotive trade between the United States and Canada since 1965. That deal, known as the U.S.-Canada Auto Pact, requires carmakers to have at least 50 percent North American content for duty-free benefits.

Mexico's existing restrictions are tougher than those that existed between Canada and the United States prior to the 1989 free-trade agreement. A foreign firm can own only 49 percent of a Mexican joint venture. Foreign firms also must export $2.50 worth of goods for every $1 in goods they import.

USED CAR FINANCING FOR CREDIT TURN DOWNS

Since 1972 Credit Acceptance Corporation (CAC) has established a proven track record for no-risk, no-recourse, no-repurchase financing for high-risk used car buyers. CAC provides funding combined with the down payment to give you a guaranteed profit on every transaction. With CAC financing, your dealership can:

- Make a guaranteed, up-front profit on every used car sale.
- Eliminate risk with no-recourse financing.
- Enjoy all the advantages of "buy here, pay here" financing without the risk or hassle of handling collections.

YOUR INVITATION TO A FREE SEMINAR

We are so confident that CAC can be of benefit to your dealership that our two-day, informative seminar is free of charge. Space is limited, so call Rich Vanderport at 800-634-1506 to register today.

Three views on free trade:

Seiroku Ochi, commercial director, Nissan Mexicana:

"In Japan, we lack a (large) work force, land and many things. If Japan is to continue to grow in the automotive industry, it must grow outside the country.

"Our worry is that the United States may not be quite willing to give a very good chance to foreign capital. So if Mexico turns just to the United States, no other Japanese company would be interested.

"The treaty must make provisions for German and Japanese companies to come here. They must receive similar treatment to Mexican and American companies. But we doubt that. It is not what the Americans are seeking."

Dietrich Aufenacker, executive commercial director, Volkswagen de Mexico:

A possible free-trade deal "is a huge opportunity, especially for the Mexican car industry, because it will be opening the domestic market to (Canada and the United States.)

Aufenacker: huge opportunity

"The international automotive industry has to see what kinds of cars it should produce in Mexico. I think it would be more worthwhile to produce entry-level cars in Mexico rather than luxury cars, due to Mexico's labor costs.

"The customer will benefit by getting cheaper cars. This practically confirms that VW's policy of using the Mexican plant as the production site for the North American markets is the correct one."

Cesar Flores, president, Mexican Automotive Industry Association:

"We are making a very careful analysis of the situation because we think that the free-trade agreement could be beneficial. We are trying to see what the advantages and disadvantages are. It is not easy for us because we have North American, European and Japanese companies here."

Flores: careful analysis

Battle lines drawn over free-trade agreement

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Wages, labor rights and the environment are threatening to run the proposed U.S.-Mexico free trade agreement aground.

A growing force in Congress is questioning the Bush administration's call for "fast-track" authority to negotiate a free-trade deal by December.

Rep. John Dingell, D-Mich., has warned the administration that the negotiations must address methods of correcting the lopsided wage differential between the two countries. Unionized auto plants in Mexico paid workers an average of $3.12 an hour in wages and benefits in 1989, compared with average compensation at UAW-organized plants in the United States of $21.51 an hour.

Issues ranging from whether Mexico is willing to protect union-organizing efforts to whether U.S. farmers will have the right to sell corn in the Mexican interior are pitting some House and Senate members against the pact.

Opponents have also voiced concerns that Mexico's pollution laws must be toughened before a torrent of new industrial investment is let loose. A study recently undertaken by KPMG Peat Marwick predicts that as much as $25 billion in new investment could go to Mexico as a result of a free-trade deal.

While manufacturers see the proposed open border as a source of new exports and cheap imports, union forces in the United States and Canada consider it a threat to jobs and future plant investment.

The UAW believes that free trade will lure thousands of automotive jobs to Mexico. The union estimates that Mexican plants — mostly low-wage "macquiladora" parts plants along the Texas and California borders — have already cost the U.S. industry 75,000 jobs.

Proponents contend that Mexico could be a shot in the arm for all North American industry.

"Will free trade cause more industry to move to Mexico? Yes, it will," predicts Harley Shaiken, professor of labor and technology at the University of California's Center for U.S.-Mexican Studies in San Diego. "Will the continent shift and all production slide into Mexico? Of course not. Politics, among other things, will prevent that."

At the same time, Shaiken believes a free-trade agreement will eventually push average Mexican wages up and U.S. wages down.

Shaiken's studies of Mexican productivity indicate that Mexican plants are highly qualified for more than the usual labor-intensive functions that industry has relocated there so far. "According to our research, the high-tech firms that have gambled and set up in Mexico have often found the quality exceeds that of the United States and equals Japan," he notes.

Chrysler willing to sell off units

Cash from non-essential operations could fund new products

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — For-sale signs are cropping up throughout Chrysler Corp. in areas not essential to vehicle making.

As the company struggles to reach a $3 billion cost-cutting target in the midst of a recession, it is trying to shed a number of minor, non-essential operations, according to published reports.

These include several small pieces of Acustar Inc., Chrysler's parts-making subsidiary.

Chrysler also is reportedly willing to reduce its stake in New Venture Gear, a historic joint venture with General Motors. New Venture Gear, formed in 1989, produces manual transmissions and transfer cases. Acustar reportedly is trying to cut its share of New Venture Gear from 64 percent to 49 percent.

Also reportedly on the block are Acustar's Sandusky Plastic Products Corp. in Sandusky, Ohio; the Etobicoke Casting Division in Toronto, and Perth Metals Industries Division in Stratford, Ontario.

Sandusky Plastic Products employs about 250 people and makes automotive and marine vinyl seating. Etobicoke Casting employs about 430 and makes engine components. Perth Metals employs about 100 and makes automotive and non-automotive powdered metal products.

Chrysler called possible sale of the units "rumor and speculation" and declined comment.

But in its annual report, issued last week, Chrysler stated its willingness to pare down operations to generate cash.

The company said it intends to spend $16.40 billion from 1991 through 1995 for new products and plant modernization. Of the $16.40 billion, $9.32 billion will be spent to produce a new line of mid-sized cars, code-named LH, and a new sport-utility, code-named ZJ, which are to bow in 1992. Chrysler said it will fund the program through cash reserves and continuing operations.

"If required, however, such sources could be supplemented by cash generated from other financing actions including the sale of assets not related to Chrysler's core automotive operations," the annual report said. "In the current economic environment, however, no assurance can be given that Chrysler will be able to complete such sales satisfactorily."

> Chrysler plans to fully fund its pension obligations, substantially with funds generated from operations over the next eight years. Such contributions may be delayed or temporarily curtailed if immediate liquidity needs dictate.
>
> Chrysler annual report

Chrysler has already confirmed that it is willing to sell a minority interest of more than 25 percent or a controlling interest in Chrysler Financial Corp., its financial subsidiary.

It has declined comment on reports that it is also trying to reduce its ownership in Diamond-Star Motors Corp., a 50-50 joint venture car-making partnership with Mitsubishi Motors Corp. in Normal, Ill.

In the annual report, Chrysler also said that its unfunded pension liability rose 32 percent, from $2.75 billion in 1989 to $3.62 billion in 1990. The company said the increase was due primarily to benefit improvements contained in the UAW labor contract signed last fall and a decline in the value of pension fund assets.

"Chrysler plans to fully fund its pension obligations, substantially with funds generated from operations over the next eight years," the annual report said. "Such contributions may be delayed or temporarily curtailed if immediate liquidity needs dictate."

Chrysler moved recently to ensure its access to cash when it reached an agreement with a consortium of 38 banks, which reorganized the company's lines of credit.

Under the agreement, Chrysler's credit line is cut from $2.64 billion to $1.75 billion, but the borrowing terms are less restrictive.

A significant new provision of the agreement requires Chrysler to use 11 domestic manufacturing facilities and other unspecified assets as collateral if the company borrows more than $500 million. The company has not borrowed under the previous line of credit.

Chrysler said in its annual report that it had $3.36 billion in cash on Dec. 31, 1990, including $576 million held by Chrysler Financial. But Chrysler Chairman Lee Iacocca indicated recently that first-quarter operations siphoned off a significant amount of that reserve.

SALES

FROM PAGE 3

dipped 20.1 percent, and trucks fell 22.9 percent.

After the end of the Persian Gulf war in late February, consumer confidence improved in March.

The Conference Board in New York said its consumer confidence index jumped to 81.0 in March from 59.4 in February, a record one-month gain. The index was 101.7 last July, just before the deployment of Operation Desert Shield.

The survey uses attitudes in 1985 as a 100-point baseline.

But the percentage of respondents who plan to buy a car within six months declined from 7.5 percent in February to 6.7 percent in March. Last July, 8.8 percent of the 5,000 households surveyed said they planned to buy a car within six months.

Loren C. Scott, an economics professor at Louisiana State University, said the overall improvement in consumer confidence was good news for the auto industry.

"When people are worried about losing their jobs, or if they've lost their job, the first thing that gets postponed is durable goods like cars, furniture and houses," Scott said. He stuck with an earlier forecast that the U.S. economy should begin to improve in the second quarter of the year.

In mid-March, Ford Motor Co. sales were down 7.9 percent — 4.9 percent for cars and 12.2 percent for trucks. General Motors overall sales fell 1.3 percent to 129,799, but Pontiac and Buick showed gains.

American Honda Motor Co., which sweetened its dealer incentives on Honda cars after sales fell in February, saw big increases in its Honda and Acura sales. Acura was up 22.9 percent for the month, and Honda rose 29.5 percent.

Sales slipped for Toyota Motor Sales U.S.A. Inc. Toyota-brand cars and trucks were off 2.7 percent, and Lexus fell 3.3 percent.

EUROPE

FROM PAGE 6

noted that Japanese component makers also scored higher on labor productivity, quality, stock turnover, design and development productivity, faster delivery and design and development cycles, more variety and, in many cases, lower product cost.

It found that the European industry's technology level "seemed adequate." At the same time, it cautioned that new technology is not being fitted into cars quickly enough.

"Rapid new product development will be one of the most important competitive weapons in the automotive industry in the 1990s," the report said. "It will be critical for European producers . . . to improve their performance along this critical dimension of competition."

The report also found dramatic differences in the way the industries are organized. While Japanese relationships between suppliers and carmakers are based on trust and cooperation, the report noted, European and North American relationships are adversarial.

The study also called for a sharp consolidation in the number of suppliers used by European carmakers. European carmakers use 800 to 2,000 direct suppliers apiece, it noted, but Japanese producers typically rely on 160 to 300.

The report followed comments last week by Susuma Miyata, managing director of Nissan Motor Co.'s new European Technology Centre in Britain, that European suppliers are still not producing to Japanese standards of quality and reliability.

According to Miyata, European standards of quality could be raised to Japanese levels "only gradually."

He also cautioned that the speed with which European suppliers design and develop components must be improved if they are to keep up with Nissan's plans to design and develop a new car every 30 months.

Nissan spent some $600 million buying parts from 177 suppliers in Europe last year. It has said it plans to increase that to about $1 billion annually with the introduction next year of a new Micra class car to be built alongside the Primera at Nissan's factory near Sunderland in northeast England.

RESEARCH

FROM PAGE 6

environmental issues related to the automotive industry," said Joseph M. Norbeck, first chairman of the partnership's management committee. He is manager of the chemistry department for Ford's research staff.

"The important benefit is to be able to respond on long-term research," he said. "We're all resource limited, and this should provide an opportunity to tackle these environmental issues as efficiently as possible."

Norbeck said all the partners have areas of expertise in which they have concentrated. For example, Ford has a very advanced "atmospheric chemistry group" and GM has concentrated on "long-term health effects."

The partnership's goals are to work closely with the EPA, the California Air Resources Board and other government agencies. The partnership will coordinate efforts with leading universities and government research centers.

Signing the agreement were Francois J. Castaing, vice president of vehicle engineering at Chrysler; John P. MacTague, vice president of technical affairs at Ford; Gary W. Dickinson, vice president in charge of the Technical Staffs Group at GM; and James C. McCandless, vice president of engineering at Navistar's Engine and Foundry Division.

Under the National Cooperative Research Act, the U.S. Justice Department's Antitrust Division and the Federal Trade Commission have been notified.

Saturn's second shift won't be like others'

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

SPRING HILL, Tenn. — When the Saturn Corp. plant inaugurates its second shift within the next few months, it will represent yet another innovation for the fledgling auto company.

Saturn, which last fall unveiled a car containing 54 patented inventions from a factory that prides itself on doing things differently, will add its work rules and shift-rotation policies to that list.

Rather than use one day shift and one evening shift, as other auto plants do, the Tennessee operation has designated an "A" shift and a "B" shift.

Saturn will rotate its entire work force from days to nights on a weekly basis, giving each group an opportunity to work both schedules.

Robert Boruff, Saturn's vice president of manufacturing, said that workers from both shifts are already in the plant, working simultaneously.

That arrangement will enable the company to start second-shift production virtually overnight, he said.

Plants normally hire a separate group of workers for a second shift and slowly phase in the shift over several weeks.

"Doing it this way will enable us to increase our production time in one step, virtually between a Friday afternoon when we go home and Monday morning when we start up again," Boruff said.

Boruff and Michael Bennett, president of Saturn's UAW Local 1853, said that while the launch is envisioned for late spring, the company has not yet chosen the date to begin.

Mechanical problems at the $1.9 billion factory resulted in a slow startup last fall, causing dealers to open stores with scant inventory.

Boruff said that those early problems "are behind us." He said the company is looking for a sign from the automobile market on when to increase production and start a second shift.

The company halted its hiring drive last month with about 4,000 plant workers. A Saturn spokeswoman said that number is adequate to begin two-shift production.

Bennett said the decision to rotate shifts is the result of five years of study on the ideal work schedule. Saturn's manufacturing employees work four 10-hour days per week.

The rotating, four-day schedules will result in less on-the-job boredom, more leisure time and greater job security, Bennett said. Second shifts are traditionally more prone to layoffs.

Bennett said market demand for the new car will be the key factor in expanding production. Saturn will add more than 30 dealers this spring, starting this week, bringing the total to about 100.

"We're not going to ignore the economic climate out there," Boruff said, referring to the current industrywide slump in auto sales.

The higher-end Saturn coupes now comprise about 25 percent of the plant's weekly output of 910 cars.

The lack of coupes in Saturn's first months left most dealers with only one or two sample models in their showrooms.

Boruff said the supply problems that limited the plant's output of automatic transmissions have also been solved, and Saturn is now turning out manual and automatic-transmission versions of the cars as dealers order them.

> "Doing it this way will enable us to increase our production time in one step, virtually between a Friday afternoon when we go home and Monday morning when we start up again."

Previa, Galant, Century fall short in 35-mph crash

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Three vehicles have scored in the "possible" head-injury range in the National Highway Traffic Safety Administration's latest 35-mph crashes.

The Toyota Previa and Mitsubishi Galant had driver-side scores above 1,000, and the Buick Century sedan had a passenger-side score above 1,000. The Ford Explorer posted a driver-side score of 903. NHTSA says that score indicates head injury is "unlikely." There was no score for the Explorer's passenger side because of testing problems. None of the vehicles have air bags.

With the release of its 1991 crash scores, NHTSA has changed its labels for the likelihood of injury. The agency now says only that injury is unlikely below 1,000 and possible above that. Previously, scores under 750 indicated injury was "unlikely," scores of 750 to 1,250 showed that injury was "possible" and scores above 1,250 indicated that injury was "likely."

The spokesman said NHTSA Administrator Jerry R. Curry changed the categories so each reflects the thresholds used in the government's occupant-protection standards. Cars comply with U.S. safety rules if occupant scores are under 1,000 in 30-mph tests.

Saturn, like Toyota, asks public for ad help

By Raymond Serafin and Cleveland Horton
CRAIN NEWS SERVICE

Advertisers constantly ask consumers to evaluate their ad copy. Saturn Corp., like Toyota Motor Sales U.S.A. Inc., has taken the concept a step further by advertising for consumer help to create future ads.

On Feb. 25, Saturn began airing two lighthearted 60-second radio spots in seven markets, asking listeners to call an 800 number to nominate a spokesman for its commercials. More than 3,000 people called the first week, with most callers nominating themselves, said Thomas Shaver, Saturn's director of marketing services.

Hal Riney & Partners of San Francisco, which handles Saturn's national and regional dealer group advertising, has prepared a follow-up spot that was expected to break last week, responding to the large number of callers who thought they would be perfect for the job.

"The campaign itself is kind of evolving," said Walter Smith, Riney vice president and management supervisor. He said a goal is to establish a "continuing dialogue" with customers and prospects.

> The Saturn and Toyota campaigns underscore the importance automakers place on developing the kind of personal customer relationship that can help nurture long-term brand loyalty.

Toyota went to the public for advertising ideas for its Previa minivan, with a print ad titled "Write our next Previa ad."

The ad featured accolades from the enthusiast publications and included a coupon for the public to add their suggestions. The ad ran, off and on, for about eight months in consumer magazines and *USA Today*. About 700 people have responded. Agency Saatchi & Saatchi DFS/Pacific of Torrance, Calif., is producing a follow-up ad featuring some consumer comments.

Earlier, Toyota created a "100,000 Mile Club" for Toyota truck owners. The company encouraged Toyota truck owners with more than 100,000 miles on their original vehicles to call an 800 number. In the past two years, more than 20,000 have called. After their claims were verified, some callers were used in ads.

The Saturn and Toyota campaigns underscore the importance automakers place on developing the kind of personal customer relationship that can help nurture long-term brand loyalty. The value of a typical new-car customer is estimated at $400,000 over a lifetime, said Shirley Young, General Motors vice president of consumer market development.

Saturn began using an 800 number with its first print ads last September and received 50,000 calls before the cars went on sale.

The Saturn radio commercials have aired so far in San Francisco; Los Angeles; Dallas; Miami; Charlotte, N.C.; and Fort Myers and Tampa, Fla.

In one spot, a folksy male announcer explains: "Because we're so new, you probably haven't heard any good word-of-mouth about us from people you trust. . . . And just so you'll want to listen to the whole commercial, we're going to try to find someone you trust ho also happens to be pretty funny."

A second spot notes that suggestions have come in for "a talk show host. . .and (local) figures like scoutmasters or truck-stop waitresses." It describes Saturn cars as designed "to go head to head with the likes of a Honda Civic" and with "a lot of neat features and a real low suggested retail price."

The announcer says the 800 number can be used not only to call in spokesman ideas, but also to find out where to test drive a Saturn.

Mercury ads adopt 'Pretty Woman' line

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

The song "Pretty Woman" is teamed with a bevy of pretty women in a series of dealer ad group spots touting Mercury cars.

The ads, which broke March 24, were created by Young & Rubicam in Detroit for the spring advertising campaign planned by dealer groups. Young & Rubicam is the ad agency for Lincoln-Mercury and L-M dealer groups.

The five 30-second spots feature young women in and around Mercury Capri, Cougar, Tracer, Sable, and Topaz cars. L-M purchased the rights to the Roy Orbison rock tune that got a second go-round at fame via the movie of the same name. A modern rendition of the song is sung by a California group.

Each spot focuses on one car in the Mercury stable. One commercial features a young woman, the wind in her blond hair, headed toward the beach in a red Capri convertible. With "Pretty Woman" playing in the background, the announcer points out the Capri's "16-valve engine, independent suspension, 2+2 seating and more."

The Topaz ad features a woman chauffeuring her children around, while the woman in the Cougar ad goes from a business suit in an office setting to casual clothes carrying an arm load of groceries.

The Sable and Tracer spots point out that the cars were named among *Car and Driver* magazine's 10 best. The Sable, Tracer and Cougar spots include customer incentive information.

Stephen G. Lyons, L-M advertising manager, said the spots were not designed to appeal to one gender or the other, but to target different segments of car buyers. The objectives of any ad, said Lyons, are to create awareness and persuade consumers to put the vehicles on their shopping lists. According to the results of consumer focus groups in Cincinnati, the ads appeal to men and women.

Chrysler and GM feed the rebate inferno

By Arlena Sawyers and Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler Corp. last week announced new consumer and dealer incentives on 1990 and 1991 vehicles, replacing programs that expired yesterday.

In addition, Chevrolet, Cadillac, Oldsmobile and Buick have revised and/or extended their customer rebates.

Most of Chrysler's customer rebates expire June 30, but there is a Sept. 30 termination date for payments of $1,500 on 1990 and 199' Dodge Monaco and Eagle Premier, $1,000 on 1991 Chrysler LeBaron coupe and convertible and $700 on 1991 Dodge Daytona. A $1,500 rebate on 1990 and 1991 Jeep Grand Wagoneer runs through Dec. 31.

Incentives of $500 on 1991 minivans without air bags continue. On 1990 minivans, the rebate to buyers is $1,500.

Chrysler's other 1991 consumer rebates are:

$1,500: Chrysler Imperial, New Yorker Fifth Avenue, Dodge Ram D/W truck (excluding diesel, including Club Cab).

$1,000: Chrysler New Yorker Salon, LeBaron sedan; Plymouth Acclaim; Dodge Dynasty, Spirit, Shadow convertible, Dakota pickup, Ram wagon, van, conversion van and Ramcharger; Jeep Comanche and Cherokee.

$700: Dodge and Plymouth Colt three-door (excluding base model), Plymouth Laser, Eagle Talon and Summit (excluding base model).

$400: Dodge and Plymouth Colt base three-door, Eagle Summit base three-door.

$500: Dodge Shadow, Plymouth Sundance and Jeep Wrangler.

$300: Dodge Ram 50 and Power Ram 50.

Consumer incentives on 1990 Chrysler Corp. cars and trucks are:

$2,000: Dodge Ram D/W truck (excluding diesel, including Club Cab), Ramcharger, Jeep Cherokee.

$1,750: Dodge Ram van conversion.

$1,500: Dodge Caravan/CV, Grand Caravan, Ram van, Ram wagon, Dakota pickup; Plymouth Voyager, Grand Voyager; Chrysler Town & Country.

$1,000: Chrysler Imperial, New Yorker Fifth Avenue, LeBaron coupe; Plymouth Laser; Plymouth and Dodge Vista; Eagle Talon; Jeep Comanche.

$700: Chrysler New Yorker Salon, Landau and LeBaron; Plymouth Acclaim and Sundance; Plymouth and Dodge Colt; Dodge Spirit, Shadow, Daytona and Dynasty; Eagle Summit.

$500: LeBaron convertible; Jeep Wrangler; Dodge Ram 50 and Power Ram 50.

In lieu of rebates consumers may choose finance rates of 4.9 percent to 9.9 percent on all vehicles except minivans. The financing rates on minivans range from 7.9 percent to 10.9 percent.

Chrysler dealer incentives, which expire June 30, are topped by a $3,-500 rebate on 1990 and 1991 Grand Wagoneer. Next in line are payments of $1,000 to $2,000 for sales of Monaco and Premier. The Monaco-Premier rebate is based on the number sold; the spiffs on Grand Wagoneer and others are flat payments per unit.

The payments are: $1,000 on 1990 and 1991 Ram Charger; $700 on 1991 Jeep Cherokee; and $500 on 1990 and 1991 Dodge Spirit, 1990 and 1991 Plymouth Acclaim, 1991 Dodge Caravan (without air bag) and 1991 Plymouth Voyager (without air bag).

Chevrolet raised the payment to $1,000 on 1990 and 1991 Luminas and Caprices and 1990 Geo Storms. Previously, the rebates were $750 on the 1990 and 1991 Lumina and 1991 Caprice and $800 on the 1990 Storm. There was no incentive on the 1990 Caprice. The payments run through May 5 on the 1990 models, July 7 on 1991s.

Alternate financing on Chevrolets remains at 8.9 percent for contracts up to 48 months and 10.9 percent for 60 months.

Oldsmobile has increased consumer rebates on Toronado by $1,000, raising the payment to $2,-250 on the 1990 model and to $2,-000 on the 1991 model. The payments run through April 7.

Finance rates in lieu of rebates are 8.9 percent for 48 months and 10.9 percent for 60 months on 1990 and 1991 models.

Buick extended consumer rebates for most 1990 models through May 5; rebates on 1991 models are scheduled to end April 7. Buick also doubled the consumer rebate on 1990 and 1991 Rivieras from $1,000 to $2,000. Rebates are available on all 1990 and 1991 Buicks except Park Avenue, Park Avenue Ultra and Estate Wagon.

In lieu of rebates, Buick offers finance rates of 4.9 percent for 24 months, 6.9 percent for 36 months, 8.9 percent for 48 months and 10.9 percent for 60 months.

Cadillac extended the $1,200 consumer rebate on the 1990 Eldorado, DeVille, Brougham and Seville through May 5, and the $1,500 rebate on the 1991 Brougham through July 7. The incentives were scheduled to expire April 7.

MONACO

FROM PAGE 2

sold and sales managers earn another payment equal to 50 percent of the salesperson's payout.

To top it off, Chrysler is offering a $1,500 retail rebate to customers. Goldfein says he is making money selling $8,995 Monacos.

"We're not making a lot of money on it but in a volume situation you are bound to make money," he said.

"If I can make the same money on five cars as on one, I'd rather have five and keep everybody busy. The employees don't feel we are going out of business tomorrow and there will be new parts and service business. And people will tell their friends and neighbors of the value they received from this dealership."

Goldfein said a $1,000 option package including cruise control, tilt steering wheel, power windows and power door locks, is available on Monaco. But 75 percent of the buyers are opting for the base model which includes a six-cylinder engine, air conditioning, AM/FM radio.

Goldfein said his chief worry is obtaining the 460 Monacos he has ordered because Chrysler has planned a limited build for the slow-selling model. As of Thursday, 40 units had been accepted for build and the company was off for Easter until Tuesday.

"I understand I may not get all of the units but I'm confident I will get a good number," he said.

The assembly plant in Bramalea, Ontario, where the Monaco and Premier are built can turn out more than 200,000 units annually, but in 1990 only 24,676 Monaco/Premier units were produced.

Chrysler built cars at the plant only one week in March and a company spokesman said the plant would be down this week.

But one source said a company memo indicates Bramalea will produce only two weeks in April and two weeks in May.

A Chrysler spokesman said there has been no boom in Premier/Monaco orders due to the cash outlays to dealers and customers.

But at least one other dealer is marketing a low-priced Monaco.

John Wallace Dodge in Overland Park, Kan., is advertising the Monaco LE for $9,995. Stephen A. Oliver, vice president of the dealership, said, "In two weeks we will sell more than all of last year because we jumped on this program."

The dealership sold 12 Monacos in 1990; it currently has 100 on order.

"We don't know how many of the vehicles we have ordered we will receive because production numbers have not been established," Oliver said. "Here's an opportunity for us to put some meat on our bones but we don't know if it will come to fruition."

VW

FROM PAGE 5

area of a football field."

VW said that by optimizing the combustion chambers, the fuel-system can also help reduce nitrogen oxide emissions and noise and increase the car's power. The company claims the new Jetta engine is the cleanest production diesel engine in the world.

Barske also said a multi-fuel Jetta that can run on gasoline or methanol could be available for sale in the United States within three years.

VW is still trying to control aldehyde emissions from the exhaust, which will be required under the new Clean Air Act. The problem begins at about 50,000 miles, when the car begins to emit high levels of aldehyde, Barske said. All automakers are wrestling with the issue, he said.

But VW has concluded that alcohol fuels are the best alternative fuels, rather than compressed natural gas or other cleaner alternatives to fossil fuels.

The company has also plunged heavily into electric cars.

California pollution regulations will require a so-called "zero-emissions" car beginning in 1998. VW is working on a electric hybrid Golf diesel that can run on both electricity and diesel fuel. Battery technology is a major obstacle, one the domestic automakers are also working on. The electric Jetta City STROMer uses a sodium sulfur battery that is "the most sophisticated" developed to date, Barske said. The car has a top speed of 65 mph and a range of 75 miles, making it most suitable for city driving, he said.

"We see pure electric vehicles as niche cars," Barske said. Widespread use of electric cars is also hindered by the power generating source of electricity, especially coal-fired plants, he said. If a large number of electric cars requires power plants to burn more coal or fossil fuel, the net effect on the environment is detrimental, he said.

Until electricity can be generated from other sources, including nuclear, water, solar or wind power, the number of electric cars will remain low, VW said.

PICKUP

FROM PAGE 1

U.S. economy.

"We have not set a timetable for the decision," the spokesman added, although another company official, who insisted on anonymity, estimated that approval could be a year away.

According to the spokesman, the truck being considered "would define a new segment between compact and full size," the niche category pushed for by officials of Toyota Motor Sales U.S.A.

The new vehicle "would not compete directly with domestic full-size trucks, but would give owners of current Toyota trucks a new product to graduate to," the statement said. The project had not advanced to the stage of building a prototype, he said.

The statement, although it largely mirrored one made by Toyota U.S.A. in early March, was significant because it marked the parent company's first official comment on the subject of a larger U.S. pickup truck. By disclosing that a prototype did not yet exist, the Japanese company seemed to be emphasising that project approval would not come soon.

A Toyota official, who spoke on condition of anonymity, went further than the official statement, however.

"There is no way we are going to put a new truck in the market right now," said the executive, who has been privy to deliberations on the project. "No way."

According to the source, political factors have weighed heavily in Toyota's deliberations on whether to launch a full-sized pickup at the last important automotive segment that is completely dominated by the Big 3.

"Things might be different if the segment were expanding and there was room to insert a new vehicle," the executive said. "But the market is contracting, and we don't want friction with the Big 3."

Sales of full-sized pickups in the United States fell 6.7 percent last year, to 1,238,624 units. Even so, sales remained in the 1.2 million to 1.3 million range that pickups have commanded since 1982.

Although Toyota said the proposed truck would be in a "new" segment, it is expected to be a large pickup in everything but marketing terms. As such, it could be expected to bleed off sales from the full-size segment.

According to the source, the truck in question would be based on the Dyna series now sold in Japan, but with a wider chassis.

The Dyna, a flatbed-based series sold in regular and long-wheelbase models, includes a minibus, dump-truck and long-bed versions. Engines range from 1.9 liters to 2.7 liters, curb-weights range from 3,036 pounds to 3,475 pounds, and wheelbases stretch from 100 inches to 131.8 on a wide-cab version.

The Toyota official, saying that no prototype existed for the proposed U.S. vehicle and that work had not yet begun on one, estimated that a decision on the project could be about one year away.

According to analyst Koji Endo of Nomura Securities in Tokyo, however, Toyota's decision will be based more on political sensibilities than marketing dictates.

"The market is nothing but political at this point," he said.

If pickups were expanding in an otherwise soft market, it would represent the last money making segment for American makers to protect, and a Toyota entry could become an issue, he said.

"This is not really the right time," Endo said. But on a long term basis, he added, Toyota would logically have to look at other segments.

Toyota's seeming hesitation on the pickup decision is a matter of "getting the timing right," according to analyst Neal Doying of Baring Securities in Tokyo.

The confusion and public statements on the project to date "seems like another case of the American side of Toyota leading the discussion to try to push direction," he said.

In Torrance, Calif., Toyota spokesman Jim Olson said he would be "surprised" if approval of the new truck were to be significantly delayed.

"We think the project is further along than that," he said.

Automotive News Staff Reporter Kristine Stiven Breese in Los Angeles contributed to this report.

GM paces truck upturn

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Last week, all U.S. assembly plants except Toyota's Georgetown, Ky., facility were closed on Good Friday.

General Motors, Ford Motor Co. and Chrysler Corp. plants also will be closed today under terms of their UAW contracts.

Despite the shortened work week, U.S. truck output increased 2.70 percent over the preceding week because of a 26.62 percent gain by GM. An increase in production of full-sized pickups was chiefly responsible for the GM boost.

Total U.S. truck production last week was scheduled at 65,330 units, down 27.94 percent from the same week last year, which was a five-day week.

Year-to-date, U.S. truckmakers have built 689,639 trucks, 27.73 percent below this point in 1990.

U.S. automakers scheduled 100,352 passenger cars last week, 8.26 percent fewer than the previous week and 26.17 percent below the year-ago week, which had five working days.

So far this year, automakers have assembled 1,304,858 cars and trucks, 9.71 percent below the 1990 pace.

Holiday trims Canada output

All Canadian assembly plants were closed Good Friday. Estimated car production last week was 22,479, off 13.08 percent from the prior week, but 2.91 percent ahead of the year-ago week.

Year-to-date, Canadian auto production of 240,959, trails 1990 by 4.55 percent.

Truck production in Canada last week was scheduled at 15,410, which was 18.97 percent below the previous week and 22.23 percent below the same week in 1990.

So far this year, Canadian truck production is 184,565, down 18.77 percent from 1990.

General Motors of Canada announced last week that the Ste. Therese, Quebec, plant will discontinue production of the Oldsmobile Cutlass Ciera July 19. The plant had been scheduled to produce the 1992 Ciera, but due to poor sales the plant will be retooled to assemble the 1992 Chevrolet Camaro and Pontiac Firebird.

SCHEDULED PLANT CLOSINGS

Bigger cars cut '90 fleet CAFE to 5-year low

Even imports feel mpg squeeze

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The average fuel economy of cars sold in the United States during the 1990 model year was the lowest since 1985 as imports and U.S.-built models alike became bigger and less efficient, the government reported last week.

In its annual report to Congress, the National Highway Traffic Safety Administration said the overall corporate average fuel economy rating for 1990 models slipped 0.2 mpg, to 28.1 mpg, the third consecutive yearly decline.

But in a clear indication of the way imports have moved steadily upmarket toward greater size and engine displacement in recent years, the federal agency said the fuel-economy gap between imports and U.S.-built cars narrowed to 3 mpg in the 1990 model year, its lowest ever.

NHTSA said the domestic fleet CAFE slipped 0.2 mpg, to 26.9 mpg, while the import makers' CAFE fell 0.8 mpg, to 29.9 mpg.

Under CAFE, automakers are required to meet a fleet average of 27.5 mpg or pay a $5 penalty on each tenth of a mile per vehicle that the car falls below the standard.

CAFE regulations also allow the carmakers to avoid fines by borrowing credits from prior years when they exceeded the standard.

Several bills have been introduced in both the House and Senate proposing to boost CAFE as high as 40 percent over the current 27.5 mpg standard by 2001. But President Bush has threatened to veto bills with "unreasonable" increases in CAFE.

Bush did not include an increase in CAFE in his National Energy Strategy program that has been translated into a bill under consideration by the Senate.

In hearings on Capitol Hill, Japanese makers have been sharply criticized for their declining fuel

see CAFE, page 43

NHTSA hikes truck CAFE for '93-'94

WASHINGTON — The federal government has increased corporate average fuel economy standards for light trucks to 20.4 mpg for the 1993 model year and 20.5 mpg for 1994.

The current CAFE standard for light trucks, which applies to the 1991 and 1992 model years, is 20.2 mpg.

Congress has empowered the National Highway Traffic Safety Administration to set the light-truck CAFE. The agency also can roll back the passenger-car CAFE, but only from the level set by Congress. That standard is 27.5 mpg.

— Diana T. Kurylko

SWEET AND SOUR

In the '80s, Honda could do no wrong; did decade of success sap its strength?

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — American Honda Motor Co. Inc. got some good news and some bad news last week.

The good news was that Honda and Acura sales in March rebounded 5.45 percent while the overall industry fell. The bad news was that Moody's Investors Corp. is reviewing the debt rating for the company's captive finance arm, American Honda Finance Corp.

The sales news was sweet because it followed a 21.6 percent sales decline during the first two months of the year.

But Moody's review looks beyond Honda's recent sales slump, climbing inventory levels and $900 incentives on Accords.

"We're reviewing the credit worthiness of Honda's finance arm, but it could be viewed as a review of all of Honda's operations in the U.S. as well as their global position and their standing in the home market," said Roger Arner, representative director of Moody's Tokyo office.

Moody's revealed it was considering a downgrading of American Honda Finance Corp.'s rating from AA3 — its fourth-highest rating. (Toyota Motor Acceptance Corp., in comparison, has Moody's highest rating, AAA.)

"This is not being done because of any recent or temporary trends It's a long-term look," said Arner.

He said issues under review include "operational and financial fundamentals" such as sales, financial position, future products, overcapacity and competitive pressures in North America, Europe and Japan.

Moody's scrutiny underscores

March tale: High hopes, poor sales

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

True to form, March came in like a lion and went out like a lamb.

Despite high postwar hopes in early March, car and truck sales declined to 1,085,170, down 14.9 percent from the year-ago month.

On a percentage basis, the decline was shared quite evenly by cars and trucks. Car sales were down 14.2 percent, and light-truck sales fell 16.2 percent.

If the end of the Persian Gulf war took a load off consumers' minds in March, it didn't show up in car and truck sales. March's drop was steeper than February's 13.7 percent decline.

According to Jack V. Kirnan, auto analyst at Kidder, Peabody & Co. Inc., the sales declines reflect falling real incomes, a sharp rise in

Escort buyers cite price lure, Mazda link

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — When you're going head-to-head with Honda in California, it helps to have a partner named Mazda and a price advantage.

In a commissioned study, Ford Motor Co. found that while buyers of the 1991 Escort might have preferred a Honda Civic, or even the Accord, they bought Escort for price. And they liked Ford's connection with Mazda Motor Corp. so much that the sociologist who ran the study will recommend that Ford mention Mazda in its marketing.

Ford Division allowed reporters to attend the focus group session in Los Angeles, the last of a six-city tour.

The 13 buyers, introduced only by their first names, discussed the Escort with each other and with Marty Goldfarb, a sociologist and president of Goldfarb Consultants, the marketing firm that conducted the focus groups for Ford.

A dozen reporters watched from behind a one-way glass with four Ford managers. The buyers knew they were being observed, but they did not know that the study was sponsored by Ford.

While members of the group were generally pleased with with their Escorts, Ford clearly has its work cut out in import-saturated California.

"People at work did tease me about buying an American car," said Cathy, a customer service manager at First Interstate Bank, who looked to be thirtysomething.

"All my friends have foreign models," said Sonny, a teacher in his 50s. "They couldn't believe I got a Ford."

About half the group said they had shopped for a Honda. "Honda is the image car in the marketplace. The Escort has to beat

AUTOMOTIVE NEWS / CHARLOTTE WHITE

First quarter production is lowest since 1982

By Phil Frame and Anne E. Wright
AUTOMOTIVE NEWS STAFF REPORTERS

The Big 3 built 1.87 million cars and trucks in the United States and Canada during the first quarter of 1991, the lowest total since 1982 when 1.70 million were produced.

The production figures reflected the combined effects of the war in the Persian Gulf and an economy in recession, both of which had a severely negative impact on sales. to swell beyond manageable levels, manufacturers reacted to the slump by making deep cuts in production.

Total first-quarter production (including transplants) in the two countries was 2.42 million units, the lowest since 2.37 million in 1983.

U.S. car production in the quarter was 1.31 million, down 9 percent from 1.44 million in the fourth quarter of 1990 and down 11 percent from 1.47 million in the first quarter a year ago. First-quarter U.S. car production was the lowest since 1.03 million in the same period of 1982.

U.S. truck production in the first quarter was 686,060, down 15 percent from 802,853 in the fourth quarter of 1990 and down 7 percent from 735,824 in the same quarter a year ago. First-quarter U.S. truck production was the lowest since 517,949 in the same quarter of 1983.

Car and truck production in Canada during the first quarter was down 11 percent from the previous quarter and down 10 percent from the year-ago quarter. Canadian car production fell 15 percent from the previous quarter and 3 percent from the year-ago quarter, while truck production was down 6 percent from the previous quarter and 17 percent from the year-ago quarter.

Canadian car production of 241,198 units was the lowest since 230,535 in the same quarter of 1987. Canadian truck production of 188,222 units was the lowest since 122,970 in 1983.

Correction

Mitsubishi Motors Corp. said an article in the April 1 issue misstated its ability to meet proposed tougher corporate average fuel economy standards. The Japanese automaker said a smaller but more spacious car it has proposed would not be able to meet the mileage standards in a bill introduced by Sen. Richard Bryan.

Dealer ad funds missing $750,000

FBI focuses on ex-Bozell employee who handled C-P accounts

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

The FBI is investigating a former Bozell Inc. employee in connection with over $750,000 allegedly stolen from two Chrysler-Plymouth dealer advertising associations in Chrysler's Memphis zone.

Ed Bradberry, FBI special agent and media representative in Memphis, confirmed that Joe Haines, a former Bozell account executive who was in charge of the zone's Chrysler-Plymouth ad association, is being investigated in connection with the missing money.

Bradberry said "no charges have been brought or filed."

"The evidence will be presented to the federal grand jury for their determination," he added.

Haines left Bozell about a year ago. The dealer groups are negotiating with Chrysler and Bozell to have the manufacturer and ad agency replace the missing money, sources said.

A Chrysler spokesman said "because of the ongoing investigation by law enforcement officials, Chrysler feels it would be inappropriate to comment on the allegations against Mr. Haines." The spokesman refused further comment.

Haines could not be reached for comment.

Bozell did not respond to requests for comment.

Pate Pearson, a North Little Rock, Ark., dealer and member of the Memphis zone board of directors, and Dennis Hansen, a Nashville, Tenn., dealer and president of the Memphis Metro Chrysler-Plymouth Dealers Ad Association, also refused comment.

There are 103 Chrysler-Plymouth dealers in the Memphis zone, which includes all of Arkansas, west and middle Tennessee, and northern Mississippi. The two ad groups victimized by the scam are the Memphis Mid-South Chrysler-Plymouth Ad Association and the Memphis Metro Chrysler-Plymouth Dealer Ad Association.

Sources said the money, which belonged to the ad groups and was earmarked to pay for association advertising, was siphoned from the accounts over a period of several years.

Dealers in the metro group became suspicious after a summer 1989 audit revealed that money that should have been used for advertising purposes went to fund things such as golf tournaments and photography supplies.

That audit was followed by another audit by the outstate dealer group. That audit revealed that several phony companies, including radio stations, had been set up in Memphis, said one source, and in Georgia, according to another source.

The bogus companies billed the dealer group for work never done, sources said.

Chrysler and Bozell refused to even discuss restitution for the dealer groups until the groups threatened to sue.

Chrysler, Bozell and the dealer groups have been wrestling with the problem since February 1990, one source said.

While no one has been legally charged in the incident, the source predicted "there will be lots of charges filed" before the matter is put to rest.

Bozell also is the ad agency for Chrysler's corporate ads and Chrysler-Plymouth division ads. Chrysler-Plymouth dealers, like most Big 3 and import dealers, are required by the manufacturer to contribute to co-op advertising funds to pay for local advertising. The majority of Chrysler-Plymouth dealers contribute between 0.5 percent and 1 percent of vehicle invoice plus up to $100 to their ad groups. Chrysler also contributes to the fund.

Chrysler requires all its dealer ad associations to use factory appointed agencies in order to receive the matching factory funds.

Some dealers in the Memphis zone said they knew nothing about the incident.

But one dealer who is aware of the incident was angry. He said Chrysler is dragging its feet in helping dealers get the matter resolved.

"Chrysler told us we have to belong to the associations — it's in our contracts," said the dealer, who asked to remain anonymous. "They tell us how to spend our money and who to spend it with. Now there is a $750,000 problem and they say it's the dealers' fault. What do we do now?"

A different dealer who did not want to be identified said he had heard rumors about the theft but that the general dealer body was never told about it.

"I've seen no inaccuracies," he said.

"Bozell still has the account; they still answer the phone."

PRICE HIKES: *Mazda tacks on third increase; Ford quietly boosts car stickers*

By John K. Teahen Jr.
SENIOR EDITOR

Mazda Motor of America posted the first "triple" of the 1991 season, raising prices last week for the third time since the model year began.

Mazda increased prices on most of its 1991 cars and trucks. The hike was 1.3 percent on a sales-weighted basis, an average of $168 per vehicle for its full lineup.

That follows a $312 increase in November and a bump of $40 when the 1991 models were introduced last September. It adds up to an average increase of $520 for Mazda since the end of the 1990 model year.

Typical increases were: base 323 hatchback, $50; 929 sedans, $350; 626 sedans and MX-6 coupes, $296; MPV minivans, $150; Miata convertible, $100. The base Miata now is $14,300.

California Mazda dealer Jon Schultz said he doesn't like price increases, but he said consumers don't necessarily keep track of them when they are spread over a year.

"What really matters is how the prices stack up against the competition. That matters more than how we stack up against our earlier prices," said Schultz, who runs Holiday Mazda-Oldsmobile in San Bernardino, Calif.

While Mazda's three price hikes lead the field in the 1991 model year, a long list of domestics and imports have gone to the well twice. On the import side the double-hikers include Toyota Motor Sales U.S.A. Inc., American Honda Motor Cop. Inc., Nissan Motor Corp. in U.S.A., Volkswagen United States Inc., Audi of America and Volvo Cars of North America.

FORD PRICE HIKES

Festiva	$28
Escort/Tracer	$40-41
Tempo/Topaz	$46-47
Probe	$52
Mustang	$58
Taurus/Sable	$61
Thunderbird/Cougar	$67
All Lincoln	$123-124
Capri	$700

Ford raised prices earlier this year on every 1991 car, but did not announce the increase. On most models the increase was $28 to $124, but stickers climbed $700 on Capri, the convertible that Mercury imports from Ford of Australia. A $582 price hike on two Taurus sedans includes $521 for making a V-6 engine standard.

Automotive News estimates that the increase averages $61 when applied to Ford's car fleet. At introduction last fall, Ford raised prices an average of $312 (1.9 percent) on a comparably equipped basis. Thus, its 1991 increase now is $373.

Chrysler Corp., like Ford, has had two full-fledged car price increases. The second took effect Jan. 2 and averaged 0.3 percent or $37. At introduction time last fall, Chrysler boosted prices an average of 0.9 percent, or $135.

General Motors raised prices of some options early this year but left car prices intact. The hikes included $15 to $30 on automatic transmission and $15 to $55 on air conditioning. The boosts added an estimated $45 to GM's introductory increase of 2.3 percent.

The Big 3 also have raised destination charges. At intro time last fall, Ford and GM boosted those fees $10 and Chrysler tacked on $25 to $40. Since Jan. 1, GM and Chrysler have gone up another $20 per car, and Ford has added $10.

Automotive News Staff Reporter Kristine Stiven Breese in Los Angeles contributed to this report.

Automotive News appoints Jewett

Automotive News has named copy editor Dale Jewett to be its service editor.

Jewett, 30, replaces Francis J. Gawronski, who retired after 36 years with *Automotive News*.

A car buff, Jewett joined the *Automotive News* copy desk in March 1990 after four years with the *Desert Sun* in Palm Springs, Calif. Prior to that, he worked for newspapers in Arizona for two years.

Jewett

A native of Iowa, Jewett graduated in 1983 from Syracuse University with a bachelor's degree in magazine journalism.

Jewett continues as a copy editor for *Automotive News*.

HONDA

FROM PAGE 1

the pressures facing Honda as it heads into the 1990s. For most of its 21 years in the United States, the company has operated with a do-no-wrong attitude. Annual sales have fallen only twice from year-ago levels, in 1981 and 1982.

While its five-year-old Acura luxury division now has four cars — two introduced in the last year — Honda Division has carried on for more than a decade with basically the same lineup: Civic, Prelude and Accord.

Accord sales are unlikely to grow as they have — few vehicles these days sell more than 400,000 annually. In addition, the company still has no truck entry.

In the meantime, Honda is trying to shore up its performance in the Japanese market and to make itself more nimble in responding to demands in Japan as well as Europe and North America. In Japan, the company projects operating profit for the fiscal year which ended March 31 will decline from 100 billion yen to 73 billion yen.

In his New Year's message, President Nobuhiko Kawamoto intimated that sales in the home market needed to rise in order to give the company better balance.

For the 12 months ended March 31, Honda's sales in Japan declined 7.6 percent to 428,152. The overall market increased during that span, causing Honda's share to fall to 7.3 percent. In the process, Honda fell behind Mitsubishi to fifth place in Japan's sales standings.

Kawamoto also stated Honda's continued commitment to building autonomous operations in Europe, Japan and North America, which accounts for about 47 percent of its worldwide revenues.

Last month, Honda Motor Co. swept away its geographic marketing groups and consolidated responsibility for worldwide automotive operations under Kawamoto to improve its ability to "respond to market changes," according to a spokesman in Tokyo.

Product limits

With a four-year product replacement cycle, Honda can respond to the market more quickly than most companies. But Honda's U.S. product lineup is narrow. And the Civic and Accord account for nearly 95 percent of Honda Division sales. With Accord now topping 400,000 units annually, Honda is staring at some limits after more than a decade of growth, concedes Thomas Elliott, American Honda's executive vice president. "We're doing so well in some segments of the automobile market that frankly to do a lot better is unrealistic," he says.

Though competing makes have two or three times as many models, Honda Division placed fifth in U.S. sales last year with 716,495 sales. It was behind only Ford Division, Chevrolet, Toyota (not including Lexus) and Dodge. And each of those sells cars as well as pickups, minivans and sport-utilities.

Elliott: staring at limits

Elliott admits that Honda needs to move into another segment. "There are four to five million units a year of non-automobile sales out there (light trucks) and we're not currently getting any share of it," Elliott said.

Honda says it is studying the possibilities, with a North American-built minivan or sport-utility the most likely prospects.

In the meantime, Honda will get a new Prelude this fall, but Elliott isn't counting on it for huge volumes. Honda sold nearly 80,000 Preludes in 1986 and less than half that many last year. But a new Civic is also on the way for the 1992 model year, and Elliott thinks Civic sales will keep growing.

THE EVOLUTION OF ACCORD

The present-day Accord sedan is 184.8 inches long and costs $14,895 with manual transmission.

In '[illegible]3, length was 178.5 inches; manufacturer's suggested retail price was $11,979 for a five-speed.

In 1982, Accord sedan measured 165.8 inches in length and a five-speed carried a $8,245 price tag.

In 1979, Accord sedan's overall length was 163.2 inches; the price for a five-speed was $8,305.

Loses price advantage

While Civic, Prelude and Accord have been Honda's sole products for more than a decade, some dealers say Honda has gotten away from its image as a marketer of low-priced, fuel-efficient cars.

Elliott shares those concerns. "Unfortunately, Honda products are no longer the lowest price out there," Elliott said. "In many cases, domestic products have a significant price advantage."

He says Honda wants to keep a low-end market presence. "We have to find ways, product-wise, to attract first-time buyers."

He says future generations of the 660-cc Today and 1.2-liter City, two models sold in Japan, could find their way to America. Both are smaller than the current Civic.

While Elliott admits that Honda may have strayed some from its earlier reputation for high quality at a low price, he takes exception to complaints that Honda has lost its edge for innovation and is trying to be everything to everyone.

The conservative exterior design of the current Accord, redesigned for the 1990 model year and Honda's decision to go with a four-cylinder rather than a six-cylinder engine are frequent criticisms. But Elliott dismisses them.

"We don't sell cars to journalists and analysts, we sell them to people who buy their car one payment at a time," he says. "And frankly four-door buyers aren't on the cutting edge. They don't have to believe it's leading edge to like it.

Elliott said he believes a four-cylinder engine is adequate. With "CAFE, EPA and all the rest, we have to look very carefully at any decisions to enlarge the engine."

Meanwhile, Camry, being redesigned for the 1992 model year, is expected to have a V-6 as standard, and Toyota will no doubt promote that as it tries to unseat Accord as the nation's No. 1 seller.

Showroom wars

Product aside, many analysts believe the battleground in the 1990s will be the dealership. And while Honda's products have enjoyed widespread acclaim, the rap against the dealer body has been that they are simply order-takers.

"The dealers are pretty arrogant. They haven't had to work too hard for sales in the past," said Jim Wangers, senior managing partner of Automotive Marketing Consultants Inc. in San Diego. "If they have to, they can change engines to get more power (in the Accord), but I'm not sure they know how to get the dealer group in line."

While Honda has generally ranked near the top in most product-related surveys from J.D. Power and Associates, it's been an average performer in the Sales Satisfaction Index. After placing ninth in 1989, Honda scored below the industry average last year, outscored by at least 16 nameplates.

In a narrower category, Honda fell below the study's industry averages for salesperson performance in each of the last three years. Honda is "deeply concerned about its satisfaction rankings with the public," said one Honda dealer, who asked to remain anonymous.

Elliott admits that some of the accusations against Honda salespeople "had some validity in the past. But it hasn't been a seller's market for a long time, and I think we're past that."

Elliott said Honda is working to educate salespeople about products and customer service and is addressing salesperson retention.

Enviable position

Despite some complaints, all dealers interviewed for this story said they would not trade their Honda franchises for any other.

In another J.D. Power survey, 76 percent of the non-Honda dealers rated Honda's franchise desirability as "excellent."

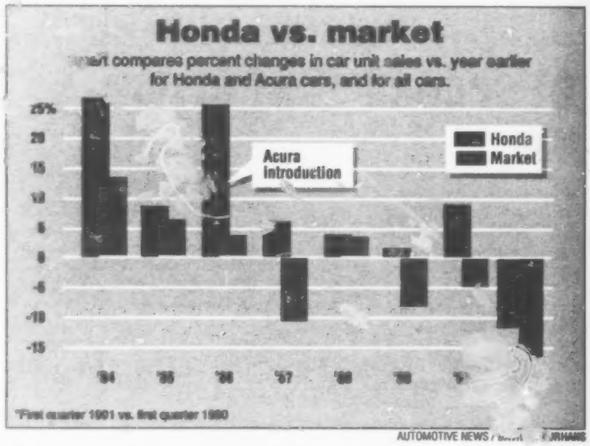
A dealer in Texas said owners are asking for "$2 million to $3 million minimum" in blue-sky for Honda stores.

Elliott points to the newest J.D. Power survey, the Vehicle Performance Index, which asks customers about their cars after three years of ownership. Acura finished first and Honda took second.

Honda advertises that it has been No. 1 in import owner loyalty for the last 14 years, based on repeat-buyer data from R.L. Polk. That claim reflects an almost cultish following despite an increasingly fickle marketplace.

"If Honda is missing a few beats, it's probably fewer than anybody else," said John Hudson, principal at Landor Associates, a San Francisco image consulting firm. A recent study by his firm ranked Honda 118th in a survey of 6,000 brand names worldwide and fifth highest among auto makers.

"There's still something magical about Honda's name."



For Acura: more dealers in the black, more competition for CSI title

LOS ANGELES -- From its beginnings as the first Japanese luxury franchise five years ago, Acura has had a mixed personality.

While Acura has been a leader in quality and customer satisfaction, Acura dealers have struggled to make their investments in separate showrooms pay off.

Now the tables may be turned.

The potential for service business increases with each new Acura on the road — and now there are more than 600,000 of them, Acura estimates. With the addition of the NSX and the new Vigor sedan, Acura has doubled its nameplates within the last year.

Dealers won't be selling many NSXs. Only 3,000 are headed to the U.S. annually. But the $61,000 flagship carries a tidy $10,000 dealer margin. And some have been selling for well above sticker.

Thomas Elliott, executive vice president of American Honda Motor Co. Inc., said more Acura dealers than ever are making money — "just above 50 percent." And that will improve with the additional products. Acura sold 138,384 cars in 1990, 459 per dealer.

But as the money-making prospects improve, Acura's reign at the top of J.D. Power and Associates Customer Satisfaction Index rankings could be threatened.

"It's going to be real tough for Acura to hold onto the title," said one Power insider. In the 1991 survey, which comes out in July, Acura will have to battle Lexus and Infiniti for the first time.

Elliott takes the threat in stride. "The price of innovation is allowing for copy cats," he said. "No question, we've got some tough competition. And in some areas, like sales satisfaction, we're not the strongest in the industry."

Elliott is trying to improve its customer service with a sales awareness effort that includes a ride-and-drive program with dealership employees in 12 markets. The hope is that salespeople who know Acura as well as the competition will be better able to serve "demanding luxury car buyers."

Path to Profits

Last year, truck dealers shifted emphasis onto service, parts and used-vehicle sales

By: Joseph Bohn

Medium- and heavy-truck dealer profitability got strafed last year, but proved its ability to withstand a sluggish national economy made even more uncertain by the Persian Gulf war.

When all was said and done, the American Truck Dealers' 20 Groups managed to average $29,850 a month in net profits during 1990, only $341 below 1989.

The creditable showing is attributed mainly to improvements in service and parts operations.

Unfortunately, even that was not enough to offset the concentrated financial hit suffered by dealers in the last six months of 1990.

As ATD's 28th annual convention and exposition winds up at the Opryland Hotel in Nashville, Tenn., tomorrow under the theme "Reach for the High Notes," the new-vehicle market is still singing the blues as service, parts and used-truck sales continue to be the path to survival.

The 20 Groups' average monthly sales of $1.589 million were off 6.1 percent in 1990 because of the sharp drop in business during the last six months of the year.

They had been running ahead of the year-earlier period until then, according to Fred Stevenson, manager of ATD consulting services in McLean, Va.

Their profit as a percent of sales went up slightly, from 1.9 to 2.0 percent, in 1990 because of increased emphasis on parts and service.

Parts and service absorption increased 4.2 percent to an overall 88.8 percent, the highest level since ATD began tracking it five years ago.

Parts sales increased 9.7 percent to a $334,500 monthly average, and labor sales climbed 14.8 percent to an average $119,400 a month.

The gains stemmed from dealers doing more repair work and getting more overall business.

"Our guys have been working on service and parts in terms of improving their efficiency and attracting new business," Stevenson said.

New-truck department sales were off 12.5 percent to $833,300 a month, reflecting poor market demand, although dealer grosses on them as a percent of sales increased slightly to 6.2 percent from 5.9 percent in 1989.

Dealers were almost dead even in year-to-year used-truck sales — $166,700 in 1990 compared to $166,200 the year before.

Grosses on used trucks reflected the tough market conditions. They dropped to 6.7 percent from 8.2 percent in 1989, with repossessions playing a key part in the decline.

Dealers did an exemplary job of keeping used-truck inventory under control and turning it frequently. Their monthly used-truck inventory averaged $416,400, up only 1.8 percent from the year-earlier average.

Dealers turned the inventory an average 5.7

Dualing is mandatory to survival for many truck dealers

Freightliner Corp.'s new requirement for exclusivity in its medium-duty franchises isn't likely to spark any changes in dualing trends, according to dealers.

Most view duals as necessary to their survival, and see no change in that unless there is further erosion of the truckmaking ranks.

"I think they'll (other manufacturers) all watch Freightliner carefully. If Freightliner pulls it off, others will demand exclusivity. But they'll run into a lot of (dealer) resistance," said George Rafferty, owner Chicago Kenworth Inc. and president of the American Truck Dealers Division of the National Automobile Dealers Association in McLean, Va. "The issue won't go away until there's a heckuva lot of consolidation among manufacturers."

For Rafferty, dualing is necessary because he needs medium-duty Isuzus and Hinos, in addition to Mid-Rangers and Kenworth heavy trucks, to keep his service shop busy.

"Too many Class 8 customers are self maintainers (do their own servicing) or they buy here and operate the trucks elsewhere," he said.

Rafferty concedes it is a "headache and expensive" to keep service and parts people trained to handle so many makes, but it is also a requisite to his survival.

He noted that none of his dealer acquaintances has dropped a secondary franchise. "If anything, I detect less resistance on the part of most OEMs to dualing," he said.

Fred Stevenson, manager of ATD's 20 Groups and consulting services, also feels the trend is toward dualing rather than away from it.

"Manufacturers deny this," he said. "But I have a feeling a lot of guys (dealers) are thinking of dualing just so they can stay in business. I just came from a group of GM dealers. Out of 12 dealers, 11 were dualed."

The 20 Groups consist of 20 dealers, with similarly sized dealership handling similar products, who meet regularly to discuss various aspects of their businesses.

Barry Coffman, co-owner of Coffman Interna-

10 x 520 = 1

It's new math for the trucking industry. For the last 10 years, 520 International® dealers have kept us the number 1 selling line of medium and heavy duty trucks in North America. Nobody offers more experience, knowledge, and service than International dealers. They're the pros we count on. And our customers count on. And we'd like to take this opportunity to say thanks.

INTERNATIONAL®
from NAVISTAR.

times during the year compared to a 5.2 turn rate the prior year.

Dealers increased their labor sales by 14.8 percent to $119,400 a month. But gross profits on these sales dropped to 63.8 percent from 64.9 percent in 1989, reflecting a need to discount more heavily in order to get the extra business.

More encouraging were gross profits on parts sales, which increased to 25.8 percent from 25.4 percent in 1989.

Parts sales per employee also increased by 6.2 percent to $24,700 on average. ATD guidelines call for an average of $24,000 per employee. If a dealer has 10 employees, they should sell an average of $240,000 worth of parts monthly.

"If you hit or exceed those guidelines, you're doing very well," Stevenson said.

Dealer parts inventories, averaging about $725,500 a month last year, were up 2.9 percent over 1989. This represented about 2.8 months' worth of supply that they carried on average.

Once again, as a result of turning inventory better, the average was down from the prior year's 2.9 months.

Stevenson said ATD's guideline is 2.7 months. While dealers haven't hit the target yet, they are coming closer every year. The 1990 average was the best since ATD began tracking such inventories in 1986 when dealers averaged 3.5 months' supply of parts.

Reducing the average enables them to free up more capital for other dealership activities.

The 1990 data also showed dealers are watching their credit closely.

Although parts and service receivables grew to $530,000, up 8.0 percent from 1989, receivables as a percent of parts and service sales dropped to 110.2 percent from 115.3 percent.

That compares to ATD's guideline of 115 percent. If parts and service receivables exceed the guideline, dealers are probably being too liberal in giving credit to customers. If the figure drops below 110 percent, the credit policies may be too tight, Stevenson said.

There are some exceptions. If a dealer does a lot of cash business, the figure could safely be below 110 percent.

Stevenson estimates dealer figures have been "about right" for market conditions that existed the past few years.

"When times get tight, guys tighten up on their credit policies — and they should," he said.

Dealer warranty sales continued to increase last year. The average monthly $41,700 sale was up 19.8 percent.

This reflects the fact that vehicle and component warranties have been getting longer, a trend that is expected to continue.

Warranty receivables from factories increased only 3 percent, another good sign. It indicates that manufacturers are paying off claims more quickly. That figure had increased by about 13 percent in each of the prior three years. □

Joseph Bohn is truck editor of Automotive News.

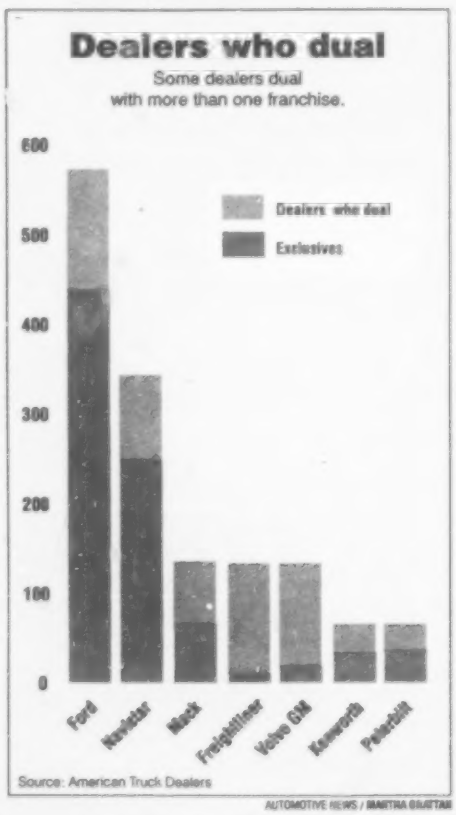
tional Inc. in Dothan, Ala., said dualing depends on what is offered by each manufacturer.

His dealership sells Mitsubishi medium-duty trucks, along with Navistar's broad line of mediums and heavies.

Coffman felt there was market potential for Class 3 to 6 cabover models, but Navistar cabovers, contracted through Nissan Diesel, only go through Class 5. He also disliked the three-party arrangement involving Nissan, Navistar and himself. "Our deal with Mitsubishi is between Mitsubishi and us," he said.

Navistar's agreement to distribute Nissan medium duties ran out in September 1990. Nissan still accepts orders from Navistar, but Navistar has stopped accepting orders from dealers due to economic issues, according to Navistar spokesman John McDonald.



Robert Coffman, co-owner of Coffman International, would like to add Class 8 Kenworths or Peterbilts. He feels, at times, that Navistar doesn't have a "sexy enough or strong enough appeal" and that, with its broad line, it doesn't always have to be price competitive in Class 8.

Navistar can forgo the "heavy-duty discount game" if it chooses by lowering prices on its medium duties where it has more profit elasticity, according to Barry Coffman. Kenworth and Peterbilt don't have that luxury.

The Coffman brothers disagree about adding another Class 8 make, with Barry feeling it would create more extra work than it is worth.

"Just the sales meetings — the sales knowledge you have to have about the total lines of trucks — make it harder for the dealership," he said.

"How many warranty claims by different makes can you handle?" he said, noting separate warranties for Navistar, Mitsubishi and components.

Rick Kilgore, owner of Mack Sales Inc. in Birmingham, Ala., has dualed Mitsubishi and Nissan's UD lines.

"Our goal is to run more volume through the operation and keep fixed costs the same," he said. "To get service absorption to 100 percent, you've got to run more volume through it."

Kilgore said that with his overhead, he probably loses money on every import, although they provide "excellent parts and service business" because their drivers tend to be more abusive.

Charles Bowen, owner of Oklahoma City Freightliner, said dualing depends on the dealer's manufacturer and location. He has never had to dual, having been successful with just Freightliner and Mercedes-Benz.

"I can make a strong argument this is the way to go," he said. "But in some markets, like Wyoming, in the oil fields, you may have to have an Autocar to supply the customer base that doesn't use Freightliner."

Added Brown: "There's people who represent a manufacturer who won't sell a handful of trucks a year. And if they do a true cost accounting, they can't even afford that. There are no Hondas in the heavy-truck business. It's strictly a commercial-type business, and the vehicles are viewed the same and bought the same way by everybody."

That, said Brown, makes it difficult for dealers with only Class 8 makes to avoid dualing. □

SALES

FROM PAGE 1

white-collar unemployment, tighter credit controls on new-car and truck loans and a glut of nearly new former fleet vehicles stealing sales from new cars.

Japanese makes showed more resistance to the trend than domestic makes. Though Japanese nameplates were off 8.6 percent in March, they continued to outperform the market. For the first quarter, Japanese makes held 24.6 percent of the U.S. car and truck market, compared with 24.0 percent for all of 1990.

Japan's sales drop again, Page 27

Big 3 sales in March were off 16.9 percent to 753,351 cars and trucks.

Chrysler Corp. fared the best among them, with a 12.1 percent decline from a poor month last year. Its performance was boosted by strong sales of its Caravan, Voyager and Town and Country minivans, whose combined sales rose 32.1 percent. The increases came as Chrysler began to fend off the competition by offering low-priced value versions of its best-sellers.

Chrysler's Jeep sales, however, were off 33.6 percent to 12,216.

Combined sales for General Motors fell 16.6 percent to 378,439. Buick remained a bright spot for GM. Sales rose 2.1 percent in March, and Buick's share of the U.S. car market now is 6.7 percent, up a full percentage point from a year ago.

Chevrolet cars and trucks, including Geo, were off 21.2 percent.

Ford Motor Co. sales fell 19.7 percent in March, as both cars and trucks declined. Lincoln was off 27.4 percent and Ford Division's car and truck sales dropped 20.4 percent.

Among the Japanese, Honda and Acura both posted March increases, giving American Honda Motor Co. a 5.5 percent gain. Honda Division sales rose 5.1 percent, aided by $900 dealer incentives on the Accord. Honda sold 44,894 Accords in March, more than enough to make it the nation's top-selling vehicle for the month. The Accord ranked fourth in February, with 24,743 sales.

Meanwhile, at Toyota Motor Sales U.S.A., combined Toyota and Lexus sales dropped 7.0 percent. Despite a 54.2 percent increase in Infiniti sales, total deliveries for Nissan Motor Corp. in U.S.A. dropped 26 percent.

Heavily advertised special leasing and finance rates helped Saab Cars USA post a 64.8 percent increase for the month, with sales of 3,752 cars.

The luxury tax on cars over $30,000 continued to hound luxury importers. Sales for Mercedes-Benz of North America Inc. fell 24.1 percent in March to 5,199; year-to-date sales were off 27 percent to 12,499.

Sales were poorest in the top of the sedan range, the S class, where deliveries were off 50.2 percent for the month and 48.6 percent for the quarter. Sales of the mid-range 300 series were off 29 percent.

Mercedes officials pinned most of the blame on the luxury tax that took effect Jan. 1, but they also cited general economic conditions.

At the bottom of the Mercedes range, sales of the 190 class rose 22.9 percent to 1,446 for the month; and were up 15.2 percent to 3,487 for the year to date.

BMW of North America Inc., which has a higher proportion of cars below $30,000, was off 14.1 percent to 4,672 in March.

CAFE

FROM PAGE 1

economy. The NHTSA report shows that eight of the 10 Asian importers had a lower CAFE in 1990 than in 1989.

But General Motors had the most dramatic decrease in CAFE for an import fleet, falling 5 mpg to 32.1 mpg. The big fall reflects the addition of Saab Automobile and GM's Canadian production to its fleet fuel-economy calculations.

GM acquired a 50 percent stake in the Swedish automaker last year. GM boosted the domestic content of its Canadian-made Geo line to 75 percent, making the fuel-efficient vehicles domestics rather than imports.

Subaru of America's CAFE took an equally steep plunge, falling 4.7 mpg to 27.8 mpg. Subaru said its CAFE fell because it introduced the Legacy, its first mid-sized car, in 1989.

Alex Fedorak, a spokesman for Subaru, said the CAFE numbers are actually good news because "they show how well the Legacy is selling."

Nissan Motor Corp. in U.S.A. said its fuel economy dropped to 28.4 mpg from 30.4 mpg in the 1989 model year, primarily because of the addition of the upscale Infiniti marque and the restyled 300ZX.

On the domestic side, none of the Big 3 met the standard. Chrysler Corp., Ford Motor Co. and GM's passenger-car CAFE fell 0.9 mpg, 0.2 mpg and 0.1 mpg, respectively, below their 1989-model-year levels to 27.1 mpg, 26.4 mpg and 27.1 mpg.

A NHTSA analyst estimated GM's penalty at $55 million and Ford's at $90 million, but said Chrysler's had not yet been calculated. Because of credit carry-forwards, however, none of the three will have to shell out any actual cash to pay fines on the 1990 shortfalls, the analyst said.

The only major European maker to meet the 1990 standard was Germany's Volkswagen Group, which slipped to 29 mpg from 30.4 mpg. The upscale Audi brand is included in VW's CAFE.

Both Alfa Romeo and Yugo exceeded their 1989 CAFE last year, rising 3.2 mpg and 0.4 mpg, respectively.

Mercedes-Benz, with a 21.4-mpg average, had the worst CAFE of any European marque and is expected to pay a penalty of $17.5 million.

A NHTSA analyst estimated GM's penalty at $55 million, Ford's at $90 million. Chrysler's had not been calculated. Because of credits, none will have to pay.

ESCORT

FROM PAGE 1

Honda to be successful," said Goldfarb.

Of the group, Goldfarb said: "In their hearts, they may have really wanted a Honda, but then logic took over and they said: 'Why should I pay so much more?' " Honda Civic suggested retail prices range from $6,995 to $13,320, and Accords are $12,525 to $19,795. Escorts are $8,016 to $11,524.

In spite of being badgered by friends, or perhaps because of it, almost all of the group could articulate clearly why they bought an Escort. They believed that the car offered high value.

"I got a really loaded car at a good price," said Eujene, a student and grocery clerk.

Goldfarb said he will suggest that Ford put more emphasis on the value message in advertising. He also said Ford should play up the fact that Mazda is Ford's manufacturing partner and that the car shares many components with the Mazda 323.

"We thought the Mazda connection was a plus, that the influence of a Japanese carmaker was good," said Nancy, an aerospace engineer and mother of two.

Goldfarb said he heard similar comments around the country — except in Detroit. He said Ford could put the Mazda connection in advertising and instruct salespersons to mention it.

None of the buyers mentioned advertising when Goldfarb asked how they had heard about Escort. When he asked about advertising specifically, the only ads the group could recall were regional dealer spots featuring actress Lindsay Wagner.

Other small issues popped up in the focus groups, including complaints that the oil dipstick is too hard to find, the automatic seat belts are irritating and the cupholders are too narrow. At every stop, Goldfarb said, buyers "seemed prepared to recommend the car. They're even bragging about it in environments where they're going against the grain."

CORVETTE

FROM PAGE 3

said Steve Campbell, project manager at the Mercury Marine engine plant in Stillwater. "It turned out to be a tolerance issue on one journal of the camshaft. But until we were able to determine what was causing the problem, we just sort of sat still. Eventually it turned out to be nothing that interfered with the customers. And it only involved 17 engines — all of which were caught before they reached customers."

Only last week, the carmaker's public relations staff acknowledged for the first time that the engine gremlin had popped up.

"In all, there were seven engine failures in the shipping yard at Bowling Green," said Tom Hoxie, a Chevrolet spokesman. "What was happening was the front camshaft bearing journal was being destroyed by a lack of oil during cold-start. The camshaft locked and then the (camshaft) gear sprocket broke off. The problem was caused by a slightly oversized cam journal in a green engine combined with below 30 temperatures."

Engineers said cold engines start up with low oil pressure and thick, heavy oil that is difficult for the engine to pump. But the spinning camshaft depends on thin, pressurized films of oil that support and lubricate the moving cam from the stationary head bearings. The front camshaft bearing is the "last outpost" on the oil circuit.

Mercury's Campbell and Chevrolet engineers insist that the problem has been fully corrected. Campbell said all of the affected engines were destroyed "looking for the root cause during analysis."

A spokesman at Chevrolet told *Automotive News* that "software changes" to the electronic control unit now limit LT5 engine revs until engine coolant reaches a certain warm-up temperature and sufficient oil pressure is assured at all bearing surfaces.

Incentives blossom for 7 makes

Imports and domestics ladle out cash to spark spring sales

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Four imported makes plus Chevrolet, Pontiac and GMC Truck fueled the incentive fires last week by announcing new or extended programs.

● **Nissan Motor Corp. in U.S.A.** added the 1991 Sentra to its dealer incentives and extended all others.

Nissan is paying dealers a flat incentive of $1,500 on each 1990 Pathfinder. The rest of the payments are tied to the dealer's performance against quota. Rebates include 1991 Pathfinder, zero to $1,500; 1990 and 1991 Stanza, zero to $1,500; 1991 Sentra, zero to $700; and pickups, $400 to $1,200.

Nissan incentives expire May 2.

● **American Honda Motor Co.** is paying dealers $500 on 1991 Accords through April 30.

● **American Isuzu Motors Inc.** started its new dealer incentive program, "The Big Deal," April 1. Through June 30, Isuzu dealers receive points for each unit car and truck they sell. At the end of the program the points will be converted into cash incentives of $800 to $2,000 per vehicle.

The 1990 and 1991 vehicles included are Impulse, I-Mark, Trooper, Stylus, Amigo, Rodeo and pickup.

● **Hyundai Motor America** is offering dealer and customer incentives through July 2. Customers will receive $500 on 1990 and 1991 Excel three-door L, $700 on 1990 and 1991 Excel three-door GS and Excel four-door L/GL and $1,000 on 1990 and 1991 Excel four-door GLS. Retail rebates of $1,000 on 1990 and 1991 Sonatas (non-Special Edition) and $750 on 1991 Scoupes (non-Special Edition) are also offered.

Hyundai dealers are eligible for $100 to $300 depending on the number of 1991 SE Sonatas and Scoupes sold. The payment levels are: four to nine vehicles, $100; 10 to 15 vehicles, $200; and 16 and over, $300.

● **GMC Truck** increased the retail incentive on 1990 Sierra and cab chassis to $750 from $500. The offer ends May 5. As an alternative to rebates consumers may choose financing ranging from 8.9 percent to 10.9 percent, depending on contract length.

● **Pontiac** is offering a $1,000 consumer incentive on 1991 Grand Am models through July 7. As an alternative to the rebates consumers may choose financing ranging from 4.9 percent to 10.9 percent.

● **Chevrolet** adjusted and extended its consumer incentives. It increased the rebate on its 1991 Geo Storm to $1,000 from $800. The 1990 and 1991 Geo Tracker and 1990 and 1991 Camaro were added and all now carry $500 rebates.

The $500 rebate on the 1990 and 1991 Astro was increased to $1,000. All 1990 and 1991 V Blazers and 1990 and 1991 Suburbans now carry a $1,000 rebate. The 1991 V Blazer and 1991 Suburban previously had a $500 rebate.

Chevrolet reduced from $750 to $500 the incentive on the 1991 R/V pickup and cab chassis. It increased from $500 to $750 the incentive on the 1990 pickup and cab chassis.

In lieu of rebates consumers may choose financing of 8.9 percent for 12- to 48-month contracts and 10.9 percent for 49- to 60-month contracts.

The incentives on 1990 Chevrolet vehicles expire May 5; the 1991 Suburban incentive ends Sept. 25. All other 1991 incentives expire July 7.

Maruti sales, income up

NEW DELHI, India — Maruti Udyog Ltd., the state-controlled automaker that produces Maruti vehicles in conjunction with Japan's Suzuki Motor Co., reported last week that production, revenue and estimated net income all rose in its just-ended fiscal year.

Maruti, which is 60 percent government owned and 40 percent owned by Suzuki, said revenue rose 26 percent from a year earlier, to 15.9 billion rupees (about $809 million), while output rose 4 percent, to 123,005 units. It estimated that net income for the year rose 7 percent, to 450 million rupees.

— Sadananda Mukherjee

FORD

FROM PAGE 3

Dealers Association, says Ford was emphatic about not putting its money into the test stores, "so it would be pretty bad if (dealers) put our money in."

Some dealers fear that program-car lots will further steal sales from new cars.

John Percelli, owner of Capital Lincoln-Mercury, says he is selling more program cars than new ones at his store in Chicago Heights, Ill.

Percelli said he sells a 1990 Town Car with 8,000 to 15,000 miles for about $19,000, compared to $30,000 for a new 1991 model. "It's not brand new, but it's a Lincoln," Percelli said of the ex-rental car. "And it comes with a warranty."

He said he sells 1991 Mercury Tracers with 4,000 to 8,000 miles for at least $1,000 less than brand-new Tracers.

> We used to teach salespeople to try to switch people from a used-car purchase to a new car. Now we try to sell from new to used.
>
> **John Percelli**
> Capital Lincoln-Mercury, Chicago Heights, Ill.

"We used to teach salespeople to try to switch people from a used-car purchase to a new car," Percelli said. "Now we try to sell from new to used."

In March, he sold half again as many program cars as new cars, he said. And his profit on the programs cars beats the profit on new cars by $300 to $400.

Percelli said, "Ford is shooting itself in the foot. Program cars are literally taking away the new-car buyer and hurting the new-car market."

The used-car lots will be tested for a year at three Ford and two Lincoln-Mercury dealers. If the separate operations succeed, Ford will roll out the program throughout the country.

Although dealers can already operate a used-car program lot on their own, they can do only in their own districts, a Ford official said. They would have to get permission from the factory to open one outside of their areas.

SATURN

FROM PAGE 3

with single-cam engines, designated SL and SL1, Saturn originally wanted to build more than 30,000, but now expects to finish the model year with just under 13,000, according to company estimates prepared last month.

The company stopped building base cars with manual transmissions for two to three months last fall because of a problem with the shifter mechanism, said John "Jay" Wetzel II, vice president of engineering.

Wetzel said the original supplier, which he would not name, had financial problems that kept it from meeting build rates. Saturn was forced to change suppliers.

Saturn also stopped building single-cam cars with automatic transmissions for a short time early on, Wetzel said, because the company wanted to change specifications on engine mounts to reduce vibration.

Production of coupes was two months behind sedans, and Saturn was not able to begin dealer shipments of coupes until late December.

But the 1992 model year gives Saturn a chance for a fresh start. The company expects to build its first three models at its planned rate and will introduce two new cars at the beginning of the model year — luxury-sport versions of the twin-cam sedan and coupe with leather interiors, sporty aluminum wheels and a rear spoiler wing.

About midway in the 1992 model year, Saturn plans to roll out its sixth model, a convertible version of its coupe.

When Saturn opens the 1992 model year Sept. 1, it plans to have 131 dealerships open and another 23 coming on line that month. An additional 13 retail outlets are set to open in the last quarter of 1991.

30-year low in car output

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

In March, U.S. automakers assembled 432,569 cars, the lowest production for that month since 1961 when 408,538 were produced.

Last week's estimated build was 95,132, up 0.48 percent over the prior week's four-day total but 14.27 percent below the same week in 1990.

Year-to-date estimated auto production is 1,400,158, down 11.39 percent from 1990.

Truckmakers assembled 242,844 units in March, the lowest build for that month since 1983 when 217,957 were produced.

Estimated truck production last week was 67,035, up 8.76 percent over the prior week but 18.60 percent below 1990.

So far this year, estimated truck production is 753,095, down 27.42 percent from 1990.

The car and truck lines at Ford Motor Co.'s Kansas City, Mo., plant are scheduled to be idle this week for facility rearrangement. Production is scheduled to resume April 15.

General Motors scheduled Saturday overtime at the Arlington, Texas, facility and the postal line at the Moraine, Ohio, plant last week.

In Canada, March production of both cars and trucks was the highest of any month this year.

Car output was 93,709, up 40.54 percent over February, and truck production was 71,863, up 27.53 percent.

Ford dumps dealer incentives; Olds tries regional pitch

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

The addictive nature of consumer rebates was hammered home again last week as Ford Motor Co. dumped its dealer incentives and restored its consumer spiffs in an attempt to shore up its sagging market share.

Also last week, Oldsmobile discontinued its national consumer rebate program and replaced it with regional promotions that offer buyers $500 to $2,250 a car.

Ford's new program includes customer rebates of $650 to $1,650 on 1990 models and $500 to $1,500 on 1991 vehicles. It does not include cash incentives to dealers.

The new program, which started April 11 and expires June 4, includes Mercury cars and Ford cars and trucks.

Last December, Ford announced a major incentive program that designated the lion's share of its incentive money to dealers. Oldsmobile announced a similar dealer-targeted incentive program in November 1989, but abandoned it a few months later after it did nothing to enhance sales.

Last week, Ford also succumbed to the pressures of a consumer-rebate-driven market. For the first three months of the year, Ford's share of the U.S. car and light-truck market declined to 23.5 percent from 24 percent last year.

While many dealers prefer dealer incentives because they can use the money where it is needed most, they admit that consumer incentives are easier to administer and easier to advertise.

At a meeting of Ford dealers at the National Automobile Dealers Association convention in Atlanta in February, dealers voted to go back to customer incentives.

Many Ford and Lincoln-Mercury dealers seemed to take a "business-as-usual" attitude toward the new program.

Craig Widner, owner of Widner Motor Sales (Ford-Lincoln-Mercury) in Cadillac, Mich., described the dealer incentive vs. customer incentive strategies as a Catch-22 be-

REBOUND

Sharp focus helps Buick regain sales

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Buick General Manager Edward Mertz seemed to bubble over with pride last month as he discussed with reporters his division's sales performance in 1991.

The casually dressed Mertz, dripping confidence and looking a bit surprised, told the gathering in Scottsdale, Ariz., how Buick had passed the invincible Honda nameplate and gained ground on No.3-nameplate Toyota.

Patriotic uptick fizzles out, Page 20

AUTOMOTIVE NEWS/JOE WILSSENS

"I don't expect to catch Toyota and we may not stay ahead of Honda all year, but we're very happy with what's going on," says Buick's Mertz.

Buick has made great strides toward recovery in 1991 after falling like a rock since 1986, when Mertz took over. Mertz attributes the recent success to an unwavering, more narrowly defined approach to product, styling and marketing. Once Mertz and company determined what Buick stood for, nothing got in the way.

"Now, I don't expect to catch Toyota and we may not stay ahead of Honda all year, but we're very happy with what's going on," Mertz said.

Then the March sales figures came in. Honda regained its position as the No. 4 car make in the country and Buick fell to fifth.

Buick isn't all the way back. In 1991, it will sell more than 200,000 units, fewer cars than in 1986. But Buick draws encouragement from:

- Sales of the new, pricey Park

GM dealers to get full 5% allowance on '91 carryovers

No more penalty for late sales

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has sweetened its traditional 5 percent carryover allowance for 1991 vehicles left in dealers' inventory when the 1992 model year begins. It will pay dealers 5 percent of sticker price for every one of those vehicles delivered to customers through March 31, 1992.

In addition, dealers will receive a lump-sum payment of 5 percent for all eligible 1991 vehicles in inventory on April 1, 1992.

This is a dramatic change from last year's carryover allowance, which paid dealers 5 percent of sticker price on all vehicles delivered to customers through Dec. 31 and a flat $150 on all eligible 1990 vehicles in inventory after that.

Since the 1950s, GM has paid dealers 5 percent of sticker for all cars left in stock when the new model year begins. In recent years, because of high inventories, GM has given dealers the option of participating in model closeout retail promotions to clear vehicles from dealers' lots. Those programs are offered instead of a carryover allowance or in combination with the carryover allowance.

That could happen again this summer if there is a glut of cars. GM may ask dealers to surrender all or part of the 5 percent carryover allowance to participate in an end-of-model-year promotion.

Another change in recent years has been a shift from a lump-sum payment to payments as vehicles are sold and delivered to customers.

GM recognizes that old-model cars and trucks still in inventory

Chrysler banks on new products as it fights for life

By Mary Connelly and Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTERS

CHRYSLER'S GAMBLE

The Chrysler Corp. of the 1990s is betting its future on a strategy that the company avoided in the 1980s. The new strategy: Bring out totally new cars and trucks, year after year, and steer clear of diversification.

Chrysler's balance sheet is taking a terrible beating. But as cash-strapped as the company is, it will certainly navigate its way through this year's storms to at least glimpse some sunlight in 1992.

Then, with the introduction of the first all-new car platform since the K-cars of 1980, Chrysler will either begin a comeback or be swamped by the huge costs of trying to remain competitive as a one-continent player in a global game.

The $3.36 billion in cash that Chrysler had the end of 1990 dwindled to less than $2.7 billion in the first quarter of 1991. At the same time, the company is shelling out $9.32 billion on just two of its vehicle programs by 1992: the new mid-sized LH-platform cars and an updated Jeep. That may not leave much of a financial safety net to face the uncertainties of 1992 and beyond.

"We don't bet the ranch on an optimistic, rosy future," says Robert S. "Steve" Miller Jr., Chrysler's vice chairman and chief financial officer. "We assume this recession may well last into 1992 and are continuing tough cost-cutting measures, trying to conserve our cash resources and everything else for the long haul."

Under the chairmanship of Lee Iacocca, Chrysler has swung this way and that since it rose from its deathbed to prosperity in the early and mid-1980s. The company put its money into diversification rather than new products, and entered the 1990s with an aging product line that President Robert Lutz admits is based on a platform that has become too narrow for Americans' tastes.

Iacocca, 66, who oversaw the halcyon days of the 1980s and must now help forge a strategy for the 1990s, admits he is tiring of the battle. And certainly the Iacocca era seems to be winding down. Thursday, an Iacocca protege, Richard E. Dauch, executive vice president for worldwide manufacturing, said he was leaving

Dauch leaves with Iacocca era entering twilight

Manufacturing exec renowned for brash, hard-charging style

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — As one Chrysler Corp. expatriate tells the story, Dick Dauch was in the conference room adjacent to his fifth-floor office in Chrysler's headquarters.

As executive vice president of worldwide manufacturing, Dauch was rallying his troops in his typical grandiloquent style. As the decibel level of his speech rose, the sentences became peppered with various vulgarities.

On the other side of the wall in an adjacent conference room, well within hearing distance, sat a decorous and genteel lady visitor — the mother of company Vice Chairman Robert S. 'Steve' Miller Jr.

> "I wasn't asked to leave. Dick Dauch is leaving because he wants to leave. This is something Dick Dauch wants to do."
>
> **Dick Dauch**
> Chrysler executive

As a result of that incident, all executive conference rooms are now dotted with placards cautioning users that the rooms are not soundproof and conversations may be overheard.

In his nearly 12 years at Chrysler, no one ever accused Richard E. "Dick" Dauch of being quiet or unassuming.

And it may be precisely that domineering and brash tone that led to his departure from Chrysler last week.

As he said himself last Thursday: "Nobody has ever accused me of being a timid leader."

Indeed, the leadership style of the one-time Purdue University varsity linebacker has been likened by at least one former colleague to that of U.S. Gen. George S. Patton.

But while that style seemed in nearly 12 years at Chrysler to earn Dauch the devotion of the men and women on the plant floor, it apparently instilled fear in his subordinates and was barely tolerated by some in the upper echelon of Chrysler management.

And as Chrysler's power base has begun gradually changing in recognition of the impending retirement of Chrysler Chairman Lee Iacocca, Dauch apparently no longer fit the new order.

Iacocca hired Dauch. When the company was tottering on the brink of bankruptcy a decade ago, Iacocca gave Dauch the charge of turning some of the industry's worst manufacturing facilities into world class operations and humane industrial environments.

By most accounts, Dauch has succeeded and earned high marks from the union rank-and-file who today toil in better lighted, better laid-out and friendlier work places. He frequently is recalled as the guy who painted all plant floors white to brighten the facilities and display his commitment to cleanliness.

But the cost to Dauch has been high. Dauch describes Iacocca as his "tutor and mentor" and at least twice in the last four years stories have swept through the auto community that Iacocca stepped in to save Dauch's job when he crossed other executives once too often.

Now, as Dauch says, "an end of an era is coming at Chrysler."

Translated, that means Iacocca is preparing to depart and Chrysler President Robert A. Lutz is readying to takeover. There seemed no place for Dauch in a Lutz regime.

There were suggestions last week that Dauch was asked to leave Chrysler and had been given three months to do so earlier this year.

Dauch vehemently rejects that notion. "I wasn't asked to leave. Dick Dauch is leaving because he

see DAUCH, page 34

"An end of an era is coming at Chrysler," says Dick Dauch, who quit as chief manufacturing executive for the automaker last week.

H. Ross Perot says he still likes Detroit.

Chrysler board hears Perot

Is Texas billionaire H. Ross Perot getting back into the automobile business through Perot Systems Corp. in a computer deal with Chrysler Corp.?

Probably not, but the scrappy entrepreneur did speak to the Chrysler board of directors last week, providing them with insights into his unique business philosophy — a philosophy that was rejected by General Motors.

And, Perot says, he still likes Detroit.

He should. It was in Detroit that Perot made a cool $700 million after he sold Electronic Data Systems Corp. to GM in 1984, became a member of the automaker's board of directors, squabbled with former GM chairman Roger Smith then relinquished his board seat for the money and headed south.

— Charles M. Thomas

O'Neal ordered to pay $5.5 million

ORLANDO, Fla. — A circuit judge has ruled that James O'Neal Jr. must pay $5.55 million to SunBank N.A. for loans he took to buy numerous auto dealerships under golfer Arnold Palmer's name.

O'Neal, the only stockholder of APAG Holdings Inc., defaulted on the loans in December, prompting the bank to place his company and an Orlando Cadillac dealership under court control.

O'Neal was general manager of Palmer's auto dealership in Charlotte, N.C. He formed APAG — believed to stand for Arnold Palmer Automotive Group — to acquire six dealerships owned by the golfer, along with about a dozen others, in efforts to form the nation's largest chain.

Palmer, who was a close friend of O'Neal's, withdrew his support of APAG at the end of last year.

SunBank earlier received court authority to sell Braun Cadillac in Orlando because it was part of the collateral put up to secure the loans to O'Neal.

But that effort is being challenged by the Edward R. Braun family because they have not received full payment for the sale of the dealership to O'Neal.

O'Neal, who lives at Palmer's Bay Hill development in Orlando, did not attend the Tuesday hearing before Circuit Judge Rom W. Powell.

Corrections

- An April 1 story on CIMCO Inc., a supplier of metal automotive parts and subassemblies, contained two errors. The story erroneously said CIMCO intends to become a tier-one supplier to Japanese transplants. Company President Peter Reick says the company is pursuing business with all automakers. The story also erroneously reported that CIMCO owns part of Mazda Motor of America, Inc. Reick says CIMCO owns no part of any Japanese maker. C. Itoh & Co. Ltd. of Japan, CIMCO's parent company, owns part of Mazda Motor of America.
- A computer error dropped Isuzu's February light-truck sales from year-to-date figures in the total vehicle market chart published April 8. The revised chart, with corrected market shares, is reprinted on Page 33.

NHTSA issues roof-crush rule for trucks

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Light trucks will be required to meet passenger car roof-crush standards and have center-mounted stop lamps beginning Sept. 1, 1993.

The new rule, issued last week, came less than a month after the federal government said all light trucks would have to have passive restraints by the 1998 model year. In both cases, Jerry R. Curry, administrator of the National Highway Traffic Safety Administration, made the announcements on the same day of Senate hearings on safety issues.

Curry: pushing truck safety

Both hearings were chaired by Sen. Richard Bryan, the Nevada Democrat who is at odds with the industry because he's pushing for mandated air bags and higher fuel economy standards.

Bryan's hearing last week, held by the Consumer Subcommittee of the Commerce, Science and Transportation Committee, was on a bill to change NHTSA's charter. The measure, still being drafted, seeks to set deadlines for rules to bring light trucks in compliance with all passenger car standards. The proposal also would require rollover standards for cars and trucks and would give consumer groups the right to sue the agency if the groups disagreed with a decision.

Curry surprised the packed hearing room with the announcement that the roof-crush standard and rear center-mounted stop lamp rules had cleared final hurdles.

The stop lamps have been mandated on cars since the 1986 model year. Under the roof-crush test, a light truck is subjected to a force 1.5 times greater than its own weight and must not have a roof dent more than five inches.

Bryan also introduced a bill to change NHTSA's charter last year. It cleared the Senate but died in the House.

Rather than argue against the proposed bill, Curry took the offensive and deluged Bryan with examples of the agency's work. Curry even promised to re-examine whether NHTSA should reinstate a 5 mph bumper standard, which the agency rolled back to 2.5 mph in 1982. Consumer activists have hammered NHTSA and Congress to reverse the decision, and Bryan raised the issue during the hearing. Curry said an interim report on the effectiveness of three passive restraint systems — air bags, automatic shoulder belts and automatic lap and shoulder belts — will be completed this year.

The agency also is nearing a decision on a light-truck rollover standard, frontal and side impact head protection and anti-lock brakes for trucks.

In addition, NHTSA is considering whether to require improved frontal crash protection and how to further protect pedestrians hit by passenger cars. Decisions will be made by 1993, Curry said.

Consumer advocates who testified later were not satisfied with the administrator's timetable.

Joan Claybrook, president of Public Citizen and former NHTSA administrator from 1977 to 1981, said the agency's top priorities should be head injury and pedestrian safety standards, safer braking systems, and increased research in biomechanics, the study of injury and tolerance to crashes.

The Motor Vehicle Manufacturers Association and the Association of International Automobile Manufacturers said there is no need for Congress to impose detailed regulations or to set timetables for NHTSA because the agency has been revitalized and is issuing numerous new requirements.

U.S., Japan square off over parts

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — U.S. trade officials are warning Japan's carmakers that they must buy more U.S. auto parts to avoid a resurgence of anti-Japanese protectionist pressures in this country.

Michael Farren, U.S. undersecretary of commerce for international trade, flatly told a group of Japanese auto industry officials here last week that the political repercussions of the "parts trade imbalance" between the two countries would be detrimental to Japanese business in the United States.

"What will happen I would not want to speculate," said Farren, who spoke at a conference sponsored by the Department of Commerce and Japan's Ministry of International Trade and Industry. Executives from all the Japanese carmakers and representatives of about 100 U.S. supplier companies attended.

"If we don't correct the situation, there will be a lot of people out there with proposals for changes that I don't think will be helpful for either industry," Farren said.

He cited auto parts as the primary component of the United States' total $41-billion-a-year trade imbalance with Japan. Reducing the $10.5-billion parts-trade deficit has emerged as this country's leading trade objective, said Farren.

> "Ford has its Glass Division. That's *keiretsu*. General Motors has its parts division. That's *keiretsu*. It's discriminatory. I'm not criticizing them. It's their structure."
>
> **Hiromichi Kamimura**
> Toyota Motor Corp.

Japan has exported more than $11 billion in auto parts to the United States over the past two years, while U.S. parts makers exported approximately $640 million in parts to Japan. The resulting $10.5-billion deficit is up from the $2-billion deficit in 1984, when U.S. and Japanese trade officials first agreed to address the issue. The figure does not reflect more than $7 billion that Japanese car companies spend to produce and buy parts within the United States.

But a soon-to-be-released study claims that U.S. auto parts makers are about to lose more ground than ever to the Japanese, despite years of promises from Japanese carmakers that they will increase purchases of U.S. components.

The study, expected to be released this week by the University of Michigan, predicts that the parts deficit, rather than easing, will double over the next four years.

The study suggests that increasing imports of aftermarket parts for Japanese vehicles will result in the parts deficit swelling to $22 billion by 1994.

AUTOMOTIVE NEWS/JOE WILSSENS

Jackie Elliot of Donnelly Corp. in Grand Haven, Mich., packages mirrors for Honda of America Manufacturing Inc. in East Liberty, Ohio.

The report also predicts that the total auto trade deficit with Japan will increase from $31 billion in 1990 to $46 billion in 1994, and that parts sales will become the largest portion of the deficit.

Over the past year, the parts-trade issue has sparked U.S. industry interests to call for trade sanctions against Japan that could include limiting Japan's access to the U.S. market. Most recently, Chrysler Chairman Lee Iacocca has called for a limit to Japan's U.S. vehicle market share.

The Michigan study was commissioned by the Auto Parts Advisory Committee, a private industry group formed last year to advise the Department of Commerce on automotive trade issues. Insiders expect the committee to ask the Commerce Department to push Japan to further open its automotive market to U.S. suppliers. Farren blamed the Japanese government for much of the frustration that U.S. parts firms have experienced in failing to win Japanese sales contracts. He said Japan's government is "woefully lacking" in its efforts to prevent discrimination against U.S. parts companies.

He also suggested that the Japanese *keiretsu* system of suppliers — which includes cross ownership of carmakers and their suppliers — serves as an impediment to U.S. sales in Japan and "leads to collusion and exclusion of competitors."

The Federal Trade Commission is investigating Japanese *keiretsu* practices in the United States.

Hiromichi Kamimura, corporate manager for Toyota Motor Corp.'s North American purchasing activities, said the political clouds over the parts issue would not affect Toyota's U.S. purchasing plans. The company has said it will purchase $1.2 billion in North American materials next year, up from $300 million two years ago.

"It doesn't affect us," Kamimura said. "What am I to do? I'm a businessman doing business with American suppliers. Some people are trying to pressure us into buying more. Do they want us to buy uncompetitive or defective parts? No one has to pressure us to buy parts that are desirable."

Kamimura also said that Farren's comments on *keiretsu* contradicted the findings of the Motor and Equipment Manufacturers Association, a U.S. trade group of about 800 suppliers. MEMA found the *keiretsu* system is a natural outgrowth of Japan's manufacturing base.

"I cannot understand why Mr. Farren is so brassy as to disregard MEMA's own study," Kamimura said. "Ford has its Glass Division. That's *keiretsu*. General Motors has its parts division. That's *keiretsu*. It's discriminatory. I'm not criticizing them. It's their structure. It's very hard to crack GM's parts business."

GMAC penalizes some deals for too many credit checks

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Dealers who submit too many credit applications with General Motors Acceptance Corp. that do not result in GMAC business may be subject to a $25 penalty for every incomplete transaction.

The finance subsidiary has implemented a policy that gives local GMAC branch offices the authority to require the charges selectively of dealers who are "using GMAC as a credit clearinghouse," said GMAC spokesman John Andrews.

If branches determine that a dealer over the span of a quarter is submitting too many applications that are not resulting in business, the branch manager can warn the dealer that a $25 fee per application will be levied if the same rate of incomplete transactions continues in the next quarter, Andrews said.

"When we put in our tiered rate structure (in January 1989), we found there was an increase in the number of applications that were approved with no contract resulting," Andrews said.

He said GMAC determined dealers were using GMAC as a bargaining tool with local banks and competitors such as GE Capital Corp.

The $25 fee is the estimated cost of running a credit check on a customer and the time GMAC branch employees spend processing an application, Andrews said.

Andrews would not say how many dealers have been subjected to the fee, but he said the number is very small.

Even if the number of dealers affected is small, GMAC determined that only a national program administered locally would fairly deal with the problem, Andrews said.

Iacocca's pay rises, Poling's dips

By Kathy Jackson and Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler Corp. paid Chairman Lee Iacocca's $4.58 million in salary and other compensation in 1990, a notch above the $3.98 million paid to him in 1989, but far short of the $20.6 million he received in 1986.

The compensation of top officers at Ford Motor Co. was reduced last year. Bonuses were eliminated because Ford's net earnings fell from $3.9 billion in 1989 to $860 million. Bonuses in 1989 were almost equal to salaries.

According to Chrysler's proxy statement, the company also paid Iacocca $1.6 million for real estate in Michigan and Florida he owned as a condition for extending his employment and granted him a variety of stock grants and options.

None of top management exercised any stock option in 1990.

Bennett E. Bidwell, retired chairman of Chrysler Motors, received $857,889 compared to $1.1 million in 1989. Bidwell also will receive $100,000 this year as chairman of the board of Pentastar Transportation Group, according to the proxy statement.

Robert A. Lutz, president, received $948,306 compared to $951,436 a year earlier.

R.S. Miller, Jr., vice chairman, received 833,379 compared to $874,266 in 1989.

R.E. Dauch, executive vice president who resigned last week, received $688,907 in compensation.

At Ford, Harold Poling, chairman and chief executive officer, earned $1.2 million last year, compared to $2.9 million in 1989, when he served as vice chairman and chief operating officer.

1990 CHRYSLER COMPENSATION

	Salary	Stock Incentive	Other	Total
Lee Iacocca, chairman	$ 918,182	$ 218,417	$3,443,862	$4,580,461
Bennett Bidwell, Chrysler Mtrs. chairman	488,803	115,833	253,353	857,989
Robert Lutz, president	562,574	135,833	249,899	948,306
R. S. Miller, vice chairman	503,852	116,333	211,194	833,379
Richard Dauch, exec. vice chairman	415,789	97,667	175,451	688,907

1990 FORD COMPENSATION

	Salary	Bonus	Stock options	Total compensation	Percent change from 1989
Harold Poling, chairman	$1,221,339	—	—	$1,221,339	–58.4
Philip Benton president	788,392	—	348,750	1,137,142	–45.2
Louis Ross, executive vice president	643,907	—	348,469	992,376	–42.4
Allan Gilmour, executive vice president	623,730	—	—	623,730	–68.8
Alex Trotman, executive vice president	516,193	—	165,656	681,849	—*

*Alex Trotman's compensation was not reported for 1989, when he was not among the top five earners at Ford.

Donald E. Petersen, Ford's chairman in 1989, earned $6.6 million in 1989, including $3.5 million by exercising stock options.

Despite the deep cuts in total compensation, UAW President Owen Bieber and Vice President Ernest Lofton say the executives still make too much money.

"Compensation stretching into the millions of dollars has become far too common among auto executives," the union leaders said in a prepared statement. "We find such compensation difficult to justify while auto workers and their families are suffering the pain of layoffs in a sluggish market."

Chrysler's proxy disclosed that the board of directors will shrink to 13 members. And, according to the proxy, corporate raider Kirk Kerkorian's Tracinda Corp., based in Beverly Hills, Calif., is the largest single stockholder with 22 million shares or 9.78 percent of stock outstanding.

Kerkorian is followed by the Wellington Management Co., based in Boston, with 20,087,350 shares or 8.91 percent; and Sanford C. Bernstein & Co., based in New York, with 17,903,791 shares or 7.99 percent of stock outstanding.

Ford dividend squeezed by debt, waning cash flow

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Growing debt and declining cash flow from operating activities played a part in Ford Motor Co.'s dividend cut last week.

Directors slashed the quarterly dividend on common stock from 75 cents a share to 40 cents, a move that will save the company about $650 million annually.

General Motors and Chrysler Corp. cut their common stock dividends earlier this year. GM's quarterly payout fell to 40 cents a share from 75 cents; Chrysler's, to 15 cents from 30 cents.

Ford had more cash on hand at the end of last year than it did on Dec. 31, 1989, $6.8 billion compared with $5.4 billion, but liabilities rose from $138 billion in 1989 to $150 billion.

The automotive side suffered most. Automotive debt soared from $3.7 billion in 1989 to $7.4 billion last year, and liabilities increased from $30.1 billion to $35.8 billion.

Net cash flow from operations also has been declining. Automotive operations generated $7.8 billion in cash in 1988, $5.6 billion in 1989 and $4.1 billion last year.

Capital expenditures rose from $6.7 billion in 1989 to $7.2 billion last year.

Scott Merlis, securities analyst at Morgan Stanley in New York, said Ford is not overburdened with debt, but its commitment to increase capital spending made the dividend cut a "prudent and positive measure."

Ford's other major division, financial services, also incurred more debt and suffered a decline in cash flow. Cash flow from operating activities dropped from $4 billion in 1989 to $3.3 billion last year. Debt increased from $81.8 billion to $88.1 billion.

TV spending rises 13 percent

But the biggest dealer advertisers cut back at local stations

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Despite sluggish vehicle sales, the nation's automakers and their dealers spent $3.21 billion for national and regional television advertising, up 13 percent from $2.84 billion in 1989.

The Television Bureau of Advertising, in a report developed from Arbitron data, summarized television advertising expenditures by automakers and dealers in 1990.

Most of the 13 percent increase is attributed to network spending, which rose 21 percent to $1.76 billion from $1.45 billion in 1989. Spot television — market-by-market — advertising was $1.44 billion, a 4 percent increase over the $1.39 billion spent in 1989.

Jim Joyella, president of the Television Bureau of Advertising, attributed the network spending rise to new product introductions and corporate campaigns geared to increasing brand awareness.

Fred Danzig editor of *Advertising Age*, a sister publication to *Automotive News*, said the bureau's figures indicate that factories and dealers actually spent more on television advertising in 1990 than 1989 because television ad "rates didn't increase in double digits."

Danzig said the announced 1990 television rate increase was around 6 or 7 percent, but big spenders such as GM and Ford were able to negotiate discount rates because they buy in bulk. That makes it difficult to determine how much of the 13 percent increase can be attributed to rate increases, he said.

"There is no rate card," said Danzig. "Everything is negotiable."

The economic downturn was evident at the local dealer level, which experienced a 16 percent decline in television advertising. In 1990, the nation's 15 leading dealer television advertisers collectively spent $270.6 million compared to $321.4 million in 1989.

General Motors and Ford Motor Co. and their respective dealer associations remained the top television ad spenders in the automotive category in 1990. GM and its dealer associations spent $978.4 million for network and spot television ads, a 16 percent increase over 1989; Ford and its dealer associations spent $407.8 million for network and spot television, 6 percent more than the previous year.

Toyota Motor Sales U.S.A. Inc. and its dealers increased spending by 42 percent to $403.2 million to become the third largest automotive television advertiser in 1990. Toyota surpassed fourth place Chrysler Corp., which spent $335.4 million, an increase of 8 percent over 1989.

Nissan Motor Corp. in U.S.A. was the fifth largest television ad spender at $267.8 million, up 34 percent over 1989.

For two years running, Toyota nameplate had the largest television budget of any single nameplate. Toyota and its dealers spent $210.5 million to advertise the nameplate in 1990, 33 percent more than the $157.9 million it spent the previous year.

The Ford nameplate was second with $168.3 million in ad revenues. Ford was followed by Nissan at $165.2 million; Buick at $132.2 million; and Honda at $125.2 million.

Luxury nameplates Lexus and Infiniti, which debuted in fall and winter 1989, respectively, enjoyed their first full year of advertising in 1990. Both outspent European nameplate Mercedes-Benz. Lexus spent $80.2 million, an increase of 168 percent; Infiniti spent $50.8 million, an increase of 211 percent. The Mercedes-Benz nameplate spent $48.6 million, 22 percent more than it spent in 1989.

Several GM nameplates decreased their 1990 television ad spending from the previous year. Chevrolet spent $120.9 million, down 5 percent; Pontiac spent $108 million, down 22 percent; Oldsmobile spent $105.7, down 14 percent and Geo spent $56.3 million, down 7 percent. Cadillac spent $71.1 million, one percent more than 1989.

GM's decreased spending partly reflects the $80 million the automaker slashed from its ad budgets for the first half of 1990. GM later restored some of the savings to fund a new corporate campaign that focused on the quality of its products.

Mazda, which launched a massive ad campaign to introduce its Navajo sport-utility last fall, spent $72.7 million on truck advertising in 1990, 134 percent more than the previous year.

In the individual auto dealer advertising category, Atlanta Toyota spent $3.2 million, making it the biggest single purchaser of television advertising in 1990. Still, that was 23 percent less than the dealership spent the previous year.

Saturn running 26-minute 'documercial' film on two cable networks

By Raymond Serafin and Alison Fahey
CRAIN NEWS SERVICE

Saturn Corp., nearing the last lap of a near-national rollout, is using an unusual buy on two cable networks as a key part of its expansion during the next 60 days.

A 26-minute film, "Spring, in Spring Hill," produced in 1989 by Hal Riney & Partners of San Francisco for internal use by Saturn, is scheduled to air on cable networks Arts & Entertainment and VH-1.

Riney calls the film the first "documercial," differing from "infomercials" in quality and the lack of a direct-response aspect.

Saturn and Riney negotiated prices at programming rates rather than ad rates, similar to what Saturn did last fall when it ran the film on stations in five markets.

Saturn's ad budget for its launch period from last fall through the end of this year is estimated at as much as $100 million.

"Spring" broke March 29 on VH-1, where it will air 17 times through June 4. It will air 13 times on A&E from April 20 through June 8. A disclaimer saying that the program is paid advertising runs at the beginning.

Officials at VH-1 and A&E said such a program is unprecedented for cable.

"We have some paid programming in the wee hours of the morning, but those are infomercials. This is completely different," said Doug Greenlaw, senior vice president for advertising sales at MTV Networks, which operates VH-1. "We see this as a piece of programming. We've never done this in prime time before."

The cable buys coincide with Saturn's addition of 34 dealers in April and 22 in May and June to bring its total to to 124 covering about 80 percent of the U.S. population.

Through March 31, Saturn had sold 8,759 cars since dealerships first opened Oct. 25.

Production and sales are accelerating. Saturn sold 3,302 cars in March, its best month, and a second shift is slated to begin working at Spring Hill this month.

A&E and VH-1 provide the sort of highly educated, import-owning audience that Saturn is going after, said Thomas Shaver, director of marketing services for Saturn.

"Spring" details how the Saturn project grew from a desire by GM executives and union members to forge a new, non-adversarial relationship dedicated to developing products that could compete head-on with the imports.

Zinc-air battery developer hopes race win sparks interest

By Melanie Johnston
SPECIAL CORRESPONDENT

PHOENIX — Now that it has a checkered flag to wave, the developer of a zinc-air battery for electric cars is hoping to attract attention from a major automaker.

A sleek Honda CRX powered by 67 horsepower worth of batteries built by Dreisbach ElectroMotive Inc. of Santa Barbara, Calif., swept past the checkered flag at the Solar & Electric 500 on April 7, averaging just under 60 miles per hour while completing 108 laps on the one-mile oval at Phoenix International Raceway. In qualifying runs, it averaged 69.4 mph.

"This win gives us credibility with the battery," said Len Danczyk, director of market development for DEMI.

"We would like to sublicense the technology to automotive companies that adopt the concept of zero-emission vehicles and use our proprietary technology," he said. "This could take the form of a spin-off company that would be funded in part by an automotive company partner committed to this concept."

Danczyk noted that this scenario would put DEMI in the role of partner, not vendor, in the engineering and production of electric vehicles.

He also said DEMI could provide the zinc-air battery to auto manufacturers on an original equipment manufacturer basis.

One potential partner is Honda. Although DEMI purchased the CRX from a California dealer, American Honda Motor Co. later joined the effort by furnishing parts and another CRX as a support vehicle, as well as loaning racing experts for suspension tuning.

Danczyk would not comment on whether Honda had expressed an interest in teaming with DEMI, but he noted the two companies were in the midst of a relationship and that "negotiations are in progress. They've seen that we are a very professional organization and can deliver on the technology."

A handful of executives from Japan's Honda Motor Co. Ltd. attended the race, and a spokeswoman for American Honda said the company will continue to support DEMI for the two-year life of the project, which was funded by $45,000 in grants from electric utilities in California and Arizona.

Engineers from Hyundai Motor Co. of Korea attended the race, as did representatives from each of the Big 3, but the Detroit contingent kept a low profile.

Ernie Holden, president of the Solar and Electric Racing Association, which sponsored the 500, confirmed that General Motors, Chrysler Corp. and Ford Motor Co. were represented, but none sponsored a car in the race. GM participated in an energy-conservation trade show during the race with a photographic display of the Impact, an electric vehicle scheduled for production in Lansing, Mich., during the middle of the decade.

The CRX was the star of the race, but among the other 12 entrants were several hopeful commercial ventures.

Two entries from Solectria, an Arlington, Mass., company that plans to market electric/solar-assisted cars directly to consumers, finished in second and fifth places. Brochures distributed at the race indicate that Solectria was seeking additional investors.

California Electric Cars, whose convertible sports car placed fourth by finishing 86 laps, expects to sell its 80-mile-range Monterey model to rental fleets in Hawaii for $26,000. The car was powered by lead-acid batteries.

Craig Campbell, president of the Seaside, Calif., company, said Hawaii's climate, limited driving range and concern for the environment make it a primary market.

Doran Motor Co. of Sparks, Nev., showed its three-wheel sports car, but was not allowed to race because rules prohibit prototypes. Company founder Rick Doran said he will soon begin selling single cars to established automotive dealers for use as a showroom draw. "By selling one vehicle at a time, we will get the money up front that we need to finance production," he said. If this capitalization program is successful, Doran hopes to begin selling vehicles priced at $12,000 directly to consumers next year.

Holden said the Solar & Electric 500, which received international media coverage, will be held again next year.

USED CAR FINANCING FOR CREDIT TURN DOWNS

Since 1972 Credit Acceptance Corporation (CAC) has established a proven track record for no-risk, no-recourse, no-repurchase financing for high-risk used car buyers. CAC provides funding combined with the down payment to give you a guaranteed profit on every transaction. With CAC financing, your dealership can:

- Make a guaranteed, up-front profit on every used car sale.
- Eliminate risk with no-recourse financing.
- Enjoy all the advantages of "buy here, pay here" financing without the risk or hassle of handling collections.

YOUR INVITATION TO A FREE SEMINAR

We are so confident that CAC can be of benefit to your dealership that our two-day, informative seminar is free of charge. Space is limited, so call Rich Vanderport at 800-634-1506 to register today.

Canadian sales slip from bad to awful

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Canadian light-vehicle sales in March fell 22.0 percent below last year, by far the steepest of three monthly falls in 1991. Sales were down 7.4 percent in January and 7.7 percent in February.

Canadian dealers sold 108,519 cars and trucks in March, dragging the industry 14.0 percent behind last year's first-quarter sales.

Car sales were off 21.2 percent in March, and truck sales plunged 23.7 percent.

Each of the Big 3 had a double-digit decline for the month. Chrysler Corp., which has suffered the least among the Big 3 so far this year, was down 25.14 percent. Ford Motor Co. plunged 29.55 percent, and General Motors fell 28.66 percent.

The declines occurred despite signs that the economy is recovering. The prime interest rate dipped to 10.75 percent last week, and the housing market is improving.

Yet March provided more evidence that that a company still needs incentives if it hopes to stay in the game. About 80 percent of Ford's March sales were made after a new incentive program was announced at mid-month.

Gord Hoddinott, president of Campbell Ford in Ottawa, said people have gotten used to cars being on sale. And they know that if there isn't a deal now, there will likely be one soon.

In addition, there has been "an overall sense that it wasn't a good time to buy cars. Buying a car is always an anxious time, only it seems worse now," Hoddinott said.

Among Japanese makes, Honda, Nissan and Toyota posted slight increases in car sales in March. Honda's Acura Division was up 13.3 percent in March and 7.81 percent for the year. Subaru and Hyundai also were up for the month.

Among the Europeans, BMW gained 9.9 percent and continued ahead of last year's total. Volkswagen, Mercedes-Benz and Volvo all dropped in March. Each is down for the year, too.

March sales consisted of 73,968 cars and 34,551 trucks.

Toyota was the only make, import or domestic, to increase its truck sales in March. Sales rose 7.8 percent for the month and 4.5 percent for the first quarter.

Through March, Canada's truck sales were off 21.6 percent from last year.

Staff Correspondent Alex Law in Toronto contributed to this report.

SALES

Asians bridge gulf, gain market share in first quarter

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

Like their domestic counterparts, Asian automakers selling vehicles in the U.S. had to contend with war and recession during the first quarter of 1991. But the patriotic, buy-American call-to-arms they feared never materialized.

As a group the nine Japanese makers, their luxury divisions, and one Korean company sold 724,184 units in the first quarter, down 13.2 percent from the same period a year ago.

Still that was enough to earn them a 25.7 percent share of the total car and truck market, up 1.7 percentage points from 1990 first-quarter levels.

Three makes — Mazda, Subaru and Infiniti — increased their sales for the three-month period. Eight others — Toyota, Lexus, Honda, Acura, Mitsubishi, Hyundai, Isuzu and Suzuki — had a mixed performance. Though their sales dropped, each increased market share by outpacing the total U.S. car and truck market, which fell 18.9 percent.

The remaining two Asian makes — Nissan and Daihatsu — lost sales and market share. Nissan's decline was 23.9 percent and Daihatsu, which has just introduced its 1991 cars, dropped 52.9 percent.

Among the sales gainers, Mazda was helped in part by aggressive rebating and option packaging. The 323/Protege series, 626 and Miata had increases.

Subaru saw its Loyale sales jump 80.4 percent, aided by a $500 customer rebate and a new option package. Two programs gussied up the car by making formerly optional equipment standard, and dropped the price below $9,000. The Legacy is "gaining momentum," according to the company. Its sales rose 9.9 percent.

Infiniti said its sales jump came from having more product and more dealers. In fact, the entire sales increase came from the new entry level G20 sedan. Infiniti sold 2,895 of them in the three-month period. Sales of the flagship Q45 actually dropped 20.4 percent for the quarter. The dealer body stands at 84, up from 63 last April.

The top-of-the-line LS400 continues to outsell the Q45 by a substantial margin, and Lexus is preparing to introduce a new coupe this summer. Q45 sales stood at 1,671, compared with 7,242 for the LS400.

Acura continues to outsell both its Japanese competitors, although division sales fell 1.5 percent compared to a year ago. The new Legend made a strong showing in March to bring quarterly Legend sales up 6.6 percent.

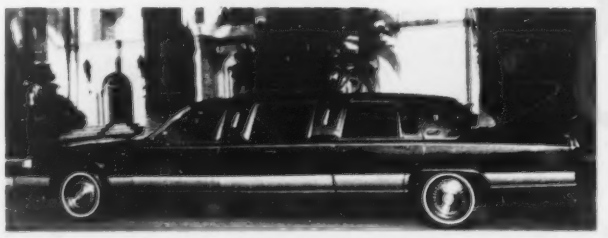
★ '90 & '91 Cadillac "S-t-r-e-t-c-h-e-d" Limos ★
★ Also '90 & '91 Lincoln Limos



"IMMEDIATE DELIVERY" ★$40,000★ "IMMEDIATE DELIVERY"

"AMERICAN CUSTOM COACHWORKS, LTD."

The all new special sizes 22", 60", 68", 75", and styles that are definitely the best value and quality that you can acquire. You may choose from cars in production for immediate delivery of approximately 54 units, or you can place your order to build a custom limo to your specifications. We are a 40 year old, family owned co. and we welcome your inquiry . . . and your purchase of our quality limousines.

CALL (213) 272-7908 OR (213) 278-0643
FOR MORE INFORMATION
"DEALER POINTS AVAILABLE" EB 31

ATTENTION MANUFACTURERS AND DEALERS!

Here's the man who pioneered the concept of the Ford Lincoln-Mercury Plan Strategy. This 2-Day Seminar is the result of his 30+ years in the auto industry... having trained over 1600 dealers throughout the United States and Canada to be successful in short-term leasing.

JERRY PLUMMER
SHORT-TERM LEASING

A Strong Training Seminar . . . for Survival in the 90's!

Jerry Plummer has been called the nation's #1 sales trainer in the automobile industry. He has trained thousands of managers and salespeople to perform at full efficiency in today's selling environment. His showroom-leasing techniques have helped his dealers....

INCREASE GROSS PROFITS
It's a fact, that an average, short-term lease increases a dealer's vehicle gross profit by 50% compared to a retail sale. That's big money you might now be missing, and a timely topic in today's market!

REPEAT BUSINESS
Almost two-thirds of short-term leasees re-lease or buy again from the same dealer. That compares to 20% or less on retail sales. Jerry Plummer's easy-to-apply strategies will show you how to earn substantial incremental profits, while increasing customer satisfaction!

USED VEHICLE PROFITS
Over 50% of all short-term leased vehicles at lease-end are purchased by the dealer for re-sale on the used-car lot. These two and three year old vehicles are prime profit opportunities! It's the only way to ensure future sales, and it can't be done without Jerry's training.

IF YOU'RE NOT USING SHORT-TERM LEASING TODAY, YOU'RE NOT IN THE CAR BUSINESS!

SHOWROOM LEASING SEMINAR
(2 Big Days) May 9th & 10th, 1991
Howard Johnson Plaza Hotel
Englewood, New Jersey

For dealers, managers and salespeople. Manufacturers and their lending-arms are welcome.
Space is limited—reservations are required. For more information or to register, contact:

Mitsubishi sues partners in U.S. rental firm

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Mitsubishi Motor Sales of America Inc. has filed suit against its partners in Value-Rent-A-Car Inc., claiming that it was deceived into paying too much money for the Florida-based daily-rental car company.

Mitsubishi agreed to pay $17.5 million for an 80-percent interest in the company last year, becoming the first importer to control a U.S. rental firm. The agreement with former Value owner Sidney Cohen also guaranteed that Cohen and his three children would remain in management at the firm and receive up to $15 million in operating profits over five years.

The lawsuit seeks unspecified damages. A Mitsubishi spokesman said the damages would "probably be in the millions."

The lawsuit claims that Value's former owners misled Mitsubishi about the rental company's assets and its financial and legal liabilities. Attorneys for the Cohen family deny the allegations.

Mitsubishi claims that it learned after the sale that Value owed more than $600,000 to Ford Motor Co. Additionally, the rental company recently agreed to pay $1.6 million to settle claims from disgruntled customers and insurance companies, according to the Florida Attorney General's office.

Value operates a fleet of 20,000 vehicles in the United States, consisting almost entirely of Fords. After the agreement with Mitsubishi, the rental company began replacing the Ford vehicles with Mitsubishi products.

The lawsuit follows a February lawsuit against Mitsubishi by the Cohens. It accused Mitsubishi of breaking its purchase agreement by seeking to remove the Cohen family members from management. That suit seeks $70 million in damages from Mitsubishi.

Mitsubishi terminated the Cohen family members two weeks ago.

BMW hikes prices; 850i up $4,100

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The price of BMW's flagship 850i coupe has risen $4,100 to $77,700, effective today.

With luxury tax and gas-guzzler fine, customers will face a $86,170 price tag.

That's unwelcome news to dealers, who were already having trouble moving the car, says John Jaffe of BMW of Fairfax (Va.), chairman of the BMW dealer council.

He says that if dealers continue to discount the car as they have been, the $4,100 price hike is "coming right off the gross profit on the car."

The old sticker price of $73,600 reflected a markup of about 19 percent, Jaffe said. That would represent around $14,000.

The increase on the 850i was one of several announced by BMW of North America Inc. last week.

The sales-weighted average price hike was 1.2 percent, or $446 per car. The V-12-powered 850i was hiked 5.6 percent.

The 850i officially went on sale last fall after being delayed several months by production glitches. Only five were sold through November, and the first trickle reportedly commanded a premium over sticker price.

But 306 were delivered in December, which Jaffe said represented several months worth of production.

It wasn't long before even the sticker price became hard to get, he said.

"In the real world, everything is being discounted," he said.

Sales fell to 158 in January, after the luxury tax on cars over $30,000 took effect.

Deliveries climbed to 199 in February and 223 in March.

BMW expects to sell every 850i it can get from the factory this year. That's about 2,500 from last December through the end of this year, a spokesman said.

Besides the pricing, the 850i has been a bone of contention between BMW and its dealers in other respects.

BMW has 377 dealers, and many are allotted only one 850i, even though BMW is requiring extra equipment and trained mechanics to work on the new car.

Some dealers are allotted none, as the company is withholding the car from dealers who don't meet its facility requirements.

Sobbing workers say goodbye to Germany's Wartburg

By Mark Fritz
THE ASSOCIATED PRESS

EISENACH, Germany — The name, the design and the engineering were all from another era, which is why the last Wartburg has finally rolled off the assembly line.

The 1,836,695th Wartburg, a basic boxy two-door automobile painted a glistening cherry red, chugged out of a plant building Wednesday while eastern German workers sobbed in sorrow and disbelief.

"My work, my work, that was my work!" shouted an almost hysterical young man.

He rested his head against a steel beam and cried.

About 1,500 people crowded into the final assembly building at the sprawling red-brick factory to watch the formal collapse of a company that cranked out cars under Hindenburg, Hitler and Honecker.

Founded in 1898, the company that once made sleek sports cars spent its final decades building clunky, utilitarian vehicles mandated by the former East Germany's Communist rulers.

When Germany united, Wartburg found it could no longer compete.

About 4,700 people at the facility lost their jobs immediately.

Another 1,300 workers will stay on for the time being, many of them building replacement parts for the tens of thousands of Wartburgs still plying the former nation's cobblestone streets.

The shutdown of Wartburg is almost a textbook example of why so many of east Germany's enterprises are collapsing now that they are no longer state-run.

Due to overstaffing and inefficiency, it cost the company 15,000 marks, about $9,000, to make a car that only sells for 7,000 marks, or about $4,200.

The company has lost $120 million since German unification six months ago.

Wartburg, one of the world's oldest carmakers, is named after the nearby castle where Protestant reformer Martin Luther hid after he challenged the Roman Catholic Church.

The employees who have lost their jobs will not be listed as unemployed, because of the federal government's subsidized wages program.

They will be listed as short-time workers who receive lower wages, but work zero hours.

Boerbel Meng, a draughtsman at the plant for 25 years, says Wartburg's demise will hit her household hard.

"My daughter is losing her job and so is my husband," she said, her eyes red as she walked out of her office for the last time to go home.

"No more Wartburgs," she said.

Toyota (1991, expires Oct. 1)

Celica GT, 4Runner	$800 discount on options

INCENTIVES

FROM PAGE 1

cause while customer incentives draw floor traffic, they do nothing to help dealer profits. He said he commends Ford for at least trying the dealer incentives.

"Dealers liked the dealer incentive program better, but Ford lost some ground to competitors who had rebates," he said.

"Upfront (consumer) rebates draw traffic."

A Ford dealership general manager who did not want to be named said the new program will have little, if any, affect on the way he does business because his dealer incentive always winds up in the pocket of the consumer anyway.

"And it's a lot simpler for us to administer," the manager added.

Ford also has revamped its finance program, which customers may choose in lieu of rebates.

It now is based on the vehicle, not the length of the contract.

The finance rate is 4.8 percent on Festiva, 5.9 percent on Escort and Tracer and 7.9 percent on other vehicles. Those rates apply regardless of the length of the loan.

The company's new schedule points to differences in the way Ford Division and Lincoln-Mercury executives look at rebates. All 1991 Ford and Mercury lines (except Capri) carry rebates, but Mercury makes no payments on 1990 Topaz, Sable and Cougar. The corresponding 1990 Ford Tempo, Taurus and Thunderbird bring $650-$750 to buyers.

Another difference: Leftover 1991 Ford Crown Victorias are worth $1,500; 1991 Grand Marquis, only $1,000.

Oldsmobile, in hopes of stimulating sales and floor traffic, is offering a variety of consumer incentive programs — a different program in each of its four regions.

Chuck Strong, executive assistant to the general sales and service manager at Oldsmobile, said each program was tailored to fit the region based on recommendations from its field assistant general sales manager.

The new program, said Strong, gives Oldsmobile the flexibility to put emphasis on the vehicles and areas where it is needed most.

"If you look at the makeup of the marketplace, California is much different from Illinois," said Strong. "You need to have more flexibility."

Oldsmobile's regions are East, South, California and Midwest.

As an example, Oldsmobile's South region program offers customers a choice of cash or a U.S. savings bond.

Incentives in that region are: 1990 Cutlass Ciera, $700 or $1,500 bond; 1991 Cutlass Ciera, $500 or $1,000 bond; 1990 Cutlass Supreme, $1,000 or $2,000 bond; 1991 Cutlass Supreme, $500 or $1,000 bond; 1990 Custom Cruiser, $750 or $1,500 bond; 1991 Custom Cruiser, $500 or $1,000 bond; 1990 98 Regency, $750 or $1,500 bond; 1991 98 Regency, $500 or $1,000 bond; 1990 Toronado, $2,250 or $4,500 bond; 1991 Toronado, $2,000 or $4,000 bond; and 1991 Bravada, $500 or $1,000 bond.

The program on 1990 vehicles expires May 5; the program on 1991 models run through July 7.

Hyundai Motor America is offering a special incentive to military personnel through July 2. The $300 rebate is available to both active and reserve personnel and supplements the national rebates that range from $300 to $1,000.

Suzuki of America Corp. has adopted a program that allows dealers to keep the rebate or pass it on to the consumer. Through June 3, Suzuki is offering $500 to $1,500 on its 1990 and 1991 vehicles.

Calif. okays bus fueled by compressed gas

SACRAMENTO, Calif. — California's Air Resources Board has pushed the nation one step closer to an alternative-fueled future by certifying for sale a 66-passenger school bus that runs on compressed natural gas.

The bus engine is said to be three times cleaner than its gasoline-burning counterpart while having a comparable useful life and range.

The engine is based on 427-cubic-inch gasoline-burning General Motors V-8.

Crusader Marine, located in Sterling Heights, Mich., and a subsidiary of Thermal Electron Corp. of Waltham, Mass., modifies the engine to run on compressed natural gas using parts developed by Tecogen.

Tecogen is a Thermal Electron Corp. subsidiary specializing in cogeneration plants.

Days' supply falls, 70 days for March

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Car inventories fell for the most part in March despite poor sales, as domestic manufacturers kept a tight rein on production.

For the industry, car inventories fell to a 70-day supply as of April 1. That compares with 77 days a month earlier. The year-ago figure was 68 days.

Car sales improved about 17.4 percent from February to March, which helped reduce inventories along with reduced production schedules.

But while sales were better, the daily selling rate for March was still 1[illegible] percent below the year-ago March.

Domestic car stocks, which stood at a 63-day supply, were considerably slimmer than the imported car supply of 90 days; both figures were reduced from March 1.

Ford Motor Co. sales fell furthest of the Big 3 rivals during March, but it had good control of its production and ended up with an inventory of 57 days supply of domestic cars.

Chrysler Corp. and General Motors had larger domestic car supplies than average.

Saab Cars USA saw its supply drop to 35 days from 58 the previous month, as its March sales more than doubled its sales in February.

Toyota plans sales in Israel

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Against a backdrop of changing political pressures, Toyota Motor Corp. says it will start selling the Corolla in Israel this year.

The World Jewish Congress, a U.S.-based activist group, has claimed Toyota, Nissan Motor Co. Ltd. and Mazda Motor Corp. have adhered to an Arab boycott of Israel.

Toyota President Shoichiro Toyoda said his company's decision to enter Israel had nothing to do with political pressure, and its absence was not because of any boycott. Until now, he said, "We were kept busy elsewhere."

Mazda and Nissan both say they are studying the possibility of entering the Israeli market, which rose from 61,000 vehicles in 1989 to 90,000 last year.

The Arab boycott came up after the Persian Gulf war in a March meeting between Foreign Minister Taro Nakayama and U.S. Secretary of State James Baker as the United States sought cooperation between Japan and Israel as a measure to ensure a new Mideast peace effort. It resurfaced when President Bush met with Prime Minister Toshiki Kaifu early this month.

The official relationship between Japan and Israel has been correct but distant as Japan sought to shore up Arab support after the oil crises of the 1970s.

A number of Japanese auto companies have been doing business with Israel for some time. Subaru, made by Fuji Heavy Industries Ltd., is the sales leader with about 30,000 units a year, followed by Mitsubishi Motors Corp., Daihatsu Motor Co. and Honda Motor Co.

Toyota said it will set up three outlets initially and plans to sell 5,000 vehicles in 1992, with the hope of capturing 20 percent of a 100,000-unit market in the future. In 1990, Toyota sold 118,000 vehicles to Arab countries.

CARRYOVER

FROM PAGE 1

after new-model introduction have less value. It adjusts for that by giving dealers a 5 percent carryover allowance. Dealers can pass along the 5 percent to customers.

Ford Motor Co. has offered dealers special incentives, including dealer cash, in lieu of the 5 percent carryover allowance in the last few years. Ford hasn't announced its 1991 program to dealers yet.

A Chrysler Corp. spokesman said the company stopped offering a carryover allowance. The company does offer other incentive programs.

Frank R. Anderson Jr., president of the National Automobile Dealers Association and owner of Sir Walter Chevrolet in Raleigh, N.C., said GM is admitting that it was in error in economizing the program last year.

"It is a big change from last year," he said. "It's an important program to have reconstituted. The big problem for dealers was that we had a tremendous carryover of 1990 models, and no real honest program available to help us sell those vehicles."

Though Anderson said the program falls short of generous, he said Ford and Chrysler will have to take a look at GM's action and develop similar plans for their dealers.

Dealers agree that GM's carryover program for 1991 models is far better than last year's.

"It wasn't much of a program last year," said Don Williams, vice president of Colonial Chevrolet in Norfolk, Va. "It may have been good for GM and Chevrolet, but it was a disaster for the retail side. This program will be a lot more helpful."

Williams said he will wait and see what closeout programs GM offers before deciding whether to participate in them.

"A couple of years ago, GM offered a tremendous sell-down program for dealers, but it was pretty costly for GM," he said.

Daniel E. Burns, owner of Dan Burns Oldsmobile in Delray Beach Fla., said the new program should be beneficial. "GM is struggling, too," he said. "This program should help dealers."

Output rises in full week

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. automakers assembled 98,086 cars last week, 3.10 percent above the prior week when the Big 3 worked a four-day holiday week. Last week's output was 6.18 percent below the year-ago week.

Year-to-date, U.S. automakers have produced 11.13 percent fewer cars than at this point last year.

Truck production was estimated at 64,204 units last week, 4.49 percent below the prior week and 7.61 below the year-ago week.

So far this year, 817,485 trucks have been assembled, a drop of 26.05 percent from 1990.

Ford has scheduled single shifts at the Lorain, Ohio, and Edison, N.J., truck plants this week.

General Motors' Wilmington, Del., car plant is down this week for assembly readjustment. The plant is being prepared for higher daily output of Chevrolet Corsica and Beretta to compensate for the closing of the Linden, N.J., assembly plant in July. GM continues to work Saturday overtime on the postal line at the Moraine, Ohio, truck facility.

CANADA: Canadian car production was 20,729 last week, down 8.14 percent from the prior week. Year-to-date, 284,492 cars have been assembled, 11.20 percent above 1990.

Truck production was 17,159 last week, up 2.14 percent over the prior week. So far this year, 222,180 trucks have been assembled, 15.39 percent behind 1990.

Ford revamps field sales, will close 31 offices

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Houston Ford dealer Jack Roach says it doesn't bother him one bit that Ford Motor Co. is closing the Houston district office, one of 31 field offices it will shut before the end of the year.

The offices that will be closed are operated by Ford Division, Lincoln-Mercury Division and the Ford Parts and Service Division.

Roach, owner of Jack Roach Ford Inc., says he never sees his zone manager anyway.

"I've only seen him twice," Roach said of the zone manager. "One time was when the local television station was coming over to shoot a commercial, and he (the zone manager) just wanted his big, fat face in it.

"You can print that."

The closings will leave 50 offices across the country and will eliminate 165 jobs. There are 576 employees in the 31 offices affected.

The company also said responsibility for all major fleet activity will be centralized in Ford's offices in downtown Detroit.

Ford Chairman Harold Poling has ordered a 10 percent cut in white-collar costs this year. The 165 job losses at the sales offices represent 8 percent of the total work force in those offices.

A letter to dealers specified that there will be no change in the number of zone managers contacting dealers directly. The letter also said the company will double the support staff at all remaining locations and add several new management positions, including eight regional marketing managers.

"The intent was to figure out a way to serve the field better and more efficiently," said Ford spokesman John Spelich. "We didn't do this just to cut costs; we will be beefing up the offices that remain."

Spelich maintained that the field organization can do just as good a job with 38 percent fewer offices.

He said that closing the eight regional offices will eliminate a layer of management that Ford and L-M divisions believe is not necessary. Under the old system, district offices report to the regions, and the regions report to company headquarters.

John Elway calls shots on car lots

By Mary Beth Vander Schaaf
NEWS EDITOR

When Denver Broncos quarterback John Elway isn't hustling on the gridiron, he's hustling iron on the lots of his new-car dealerships.

Elway and his partner, veteran dealer Rod Buscher, last week scored one of the largest automotive acquisitions in Colorado history when they bought Metro automobile group from Mel Nelson. Metro comprises Toyota, Honda, Oldsmobile, Hyundai, Suzuki and Daihatsu franchises in the Denver area and tallied $85 million in sales last year, Elway said.

Said Buscher: "This was bigger than what we were looking for, but with the franchises that were involved, the opportunity was too great to pass up."

Elway, 30, has taken the Broncos to three Super Bowls but has yet to win one.

He draws parallels between dealing cars and playing football.

"It's always interesting," he said. "Something different happens every day."

Elway plans to be at the dealerships every day in the off-season. "During the season he'll stay in contact but his priority then is football," Buscher said.

Elway and Buscher are operating the Metro franchises as three dealerships: John Elway Toyota in Englewood, John Elway Honda in Westminster, and John Elway Motors (Oldsmobile-Hyundai-Suzuki-Daihatsu) in Westminster.

Elway entered the car business in June 1989 with Buscher, Broncos owner Pat Bowlen and two other partners.

They owned a Jeep-Eagle store in Thornton, Colo., and added a Mazda store in Englewood.

In a stock swap last month, Elway and Buscher gained ownership of John Elway Mazda and ceded their interest in Pro Jeep-Eagle.

Elway said his initial dealership involvement was promotional and

Panda drops dream of building China car

By Stephen Vines
SPECIAL CORRESPONDENT

HONG KONG — Panda Motors Corp., the would-be automaker backed by Korea's Unification Church, has abandoned its plan to build cars in China and is seeking a buyer for its assets.

The decision to drop the two-year-old project — which once envisioned building a huge greenfields complex capable of producing 300,000 cars a year for worldwide export — was "really a matter of economics," Richard Cummins, chief operating officer of Panda Motors (China) Corp., said in Hong Kong last week.

According to Cummins, attempts to attract independent investors to the proposed $1 billion project were unsuccessful, as were attempts to find a carmaker willing to supply kits for production. He did not disclose the amount of the Unification Church's investment in the project to date.

Panda is now looking for an established automaker to take over the project or to acquire a substantial equity stake in the corporation and produce its own marque in the yet to be completed plant situated at Dan Shui, near China's border with Hong Kong, he said.

"We're looking for someone who is already producing cars and has an interest in China," he said.

> We're looking for someone who is already producing cars and has an interest in China.
>
> **Richard Cummins**
> Panda Motors Corp.

Perhaps the key reason for the project's failure, however, was Panda's inability to find a carmaker willing to supply kits to the new company. Although it was the company's stated intention to "develop" its own range of 1.6-liter sedans and minivans, it would have had to begin with kit assembly of someone else's car.

But Japanese and Korean companies said they had little enthusiasm for equipping a potential rival to compete in export markets.

Cummins said Japan's Nomura Securities Ltd. had been retained to find a buyer or equity partner for Panda, and that the firm has spent the past four weeks contact-

VW looks to Mexico for more cars

Puebla may be new home for current German-sourced vehicles

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

WOLFSBURG, Germany — Volkswagen AG, which already has the goal of producing all Golfs and Jettas sold in North America at its plant in Puebla, Mexico, may tap the facility to supply other models now shipped from Germany, VW Chairman Carl Hahn said in an interview last week.

"We are investigating further alternatives that could be profitably sourced in Mexico," he said.

Volkswagen has been exporting Golfs and Jettas to the United States from Mexico since closing its Westmoreland, Pa., plant two years ago. Conceivably, any German-sourced product now sold by VW in North America could eventually be put into production in Mexico, according to Hahn.

Besides Golf and Jetta, VW's North American offerings include the Passat, Corrado, Cabriolet and Vanagon from Germany, and the Brazil-built Fox.

Asked which additional products are under consideration for Puebla, Hahn said, "I do not yet have an answer to this question."

Volkswagen de Mexico S.A. de C.V., which holds an industry-leading 38 percent of the Mexican market, produces Golf, Jetta and Beetle cars and Type 2 minibuses and commercial vans at Puebla. Exports of about 46,000 cars to the U.S. and Canada last year are expected to rise to 150,000 in 1992 or 1993.

Volkswagen is spending $1 billion over five years to modernize and expand capacity to 300,000 to 200,000 units.

"We have upgraded Mexico,

see VW, page 50

Hahn: "We have twice doubled our production figures in Mexico. We are now at 1,000 vehicles a day."

Chrysler takes command of General rentals

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Even though it is trying to sell some of its assets, Chrysler Corp. has purchased General Rent-A-Car, which has a rental fleet of 18,000 vehicles.

Chrysler declined to disclose terms of the deal, which was completed April 3 and made General a wholly owned subsidiary.

Chrysler's purchase of General occurred as the domestic automakers are trying to stem the tide of so-called program cars that makers repurchase from daily rental fleets and sell to dealers through auctions. Automakers claim that dealers' sales of those nearly new autos to consumers are cannibalizing new-car sales.

Chrysler owns three other rental car companies: Thrifty Rent-A-Car Systems Inc., Snappy Car Rental Inc. and Dollar Rent A Car Inc.

An estimated 80 percent of General's fleet is composed of Chrysler vehicles, according to a Chrysler spokesman. General, based in Hollywood, Fla., operates about 70 locations in the United States, including airport and off-airport sites, Chrysler said.

Chrysler said it bought General because "it makes Chrysler more competitive and presents the company with a greater opportunity to put Chrysler vehicles in more locations."

But unlike its past acquisitions of rental car companies, Chrysler completed the purchase without a public announcement. That may be because Chrysler is in the midst of a $3 billion cost-cutting campaign and is trying to shed many assets to raise cash and curb spending.

General and Chrysler declined to specify General's 1990 revenue. But it is not a large player in the daily rent-a-car market.

Automotive Fleet magazine's *1990 Fact Book* ranks General No. 8 in the daily business/leisure rental field with estimated 1989 revenue of $190 million and a 2.6 percent share of the fleet market. Industry leader Hertz, with a fleet of 170,000 vehicles, had estimated 1989 revenue of $1.5 billion and 24 percent of the market.

Sixth-ranked Dollar, which is Chrysler's biggest car rental company with a fleet of 35,000 vehicles, had estimated 1989 revenue of $255 million and 5 percent of the market, the publication said.

As a subsidiary of Chrysler, General is the responsibility of Theodor Cunningham, Chrysler's executive vice president of sales and marketing. General has about 1,500 employees nationwide.

Chrysler's other three rental car companies are subsidiaries of Pentastar Transportation Group, a Chrysler subsidiary run by Bennett Bidwell. Bidwell retired last Dec. 31 as chairman of Chrysler Motors.

General was not put in the Pentastar Group to avoid a conflict of interest, a Chrysler spokesman said. Dollar has operations at airports, and Thrifty is an off-airport network. General competes in both areas. Snappy competes is a separate market, supplying temporary replacement vehicles for persons whose cars have been stolen or are being repaired after a collision.

F. Paul Silicato, who bought General in May 1989 with V. William Monaco, remains president of the company, Chrysler said. Monaco continues as executive vice president. Silicato doubled General's rental locations after his 1989 purchase.

Industry looks toward truck strike

May 31 deadline looms; government derails rail walkout

By Greg Bowens
SPECIAL CORRESPONDENT

The auto industry may have averted one disaster with the short railway strike, only to leap into the arms of another.

Negotiations between 31 U.S. and Canadian trucking companies and the Teamsters union begin today in Scottsdale, Ariz., with hopes that both sides can reach an agreement before the union's contract expires on May 31.

The rail strike began early last Wednesday and ended the next day after Congress and the president approved a bill establishing a new emergency board to resolve the dispute within 65 days.

Although U.S. factories lost little production during the brief rail strike, a trucking strike could prove to be a nightmare for the industry; every new car and light truck sold in the United States must be shipped by truck at some point.

Moreover, as the railroad strike illustrated, brief supply-line interruptions can close Big 3 assembly plants within days. Three U.S. assembly plants closed briefly because of the one-day strike.

Reports indicate that 60 percent of all new cars manufactured in the United States and 20 percent of all the parts used in assembly are transported by rail.

Last year, independent Canadian truckers blockaded ports of entry between Canada and the United States. Some parts shipments to assembly plants were halted and domestic assembly plants quickly shut down.

Japanese transplants went largely unaffected by the railway strike but will not escape so easily this time. Most of their parts are shipped by truck.

Jim Wiseman, a spokesman for Toyota Motor Manufacturing USA Inc. in Georgetown, Ky., provided an example of the transplants' particular dependency on truckers.

"Most of our parts and supplies now come in from U.S. suppliers. Every one of those come by truck," he said.

Robert Farrell, president of the National Automobile Transporters Association, said he is not optimistic about avoiding a strike.

The association, headquartered in Detroit, represents 35 of the approximately 45 auto carriers operating nationwide.

According to Farrell, 31 of his members operate with union employees and all of them are expecting a rough ride during the negotiations.

"There are going to be some problems," he said.

One of the key issues seems to be the practice of "double-breasting," where a larger freight company operates both union and non-union transporter companies. The Teamsters want to end the practice and force companies to agree to operate only union transporters.

The next generation Audi 80 will have a larger trunk and front grille similar to the 100 sedan.

THE 'NEW' AUDI: *80/90, 100/200 replacements spearhead drive for new niche*

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

BAY CITY, Mich. — Hoping to leave its past behind, Audi of America will replace more than half its product line in the 1992 model year and will try to reposition its cars between European and Japanese luxury models.

Richard Mugg, vice president in charge of Audi of America, said he believes the end of the recession coupled with the aging "baby boom" generation will expand the luxury car market.

Audi, he said, will earn its place in that segment by marketing itself as a "new" company with all-new, quality products and a smaller, more dedicated dealer body.

Audi has set its sights on the "gap" between the $38,000 Japanese luxury cars and the $48,000 European luxury cars.

"Audi will not attempt to position itself in the upper regions of that market, we're quite content in what we call the 'gap,'" Mugg said. "The gap between the 'blue-blooded' Mercedes-Benz and BMW and the newer entries from Japan."

The repositioning of Audi was among several topics discussed by Volkswagen of America Inc. executives, including William Young, president and chief executive officer, at a press briefing on the current state of the company. VWoA imports and markets Volkswagens and Audis in the United States.

Overweight micro-mini motor homes to be recalled

By Joseph Bohn
TRUCK EDITOR

The National Highway Traffic Safety Administration confirmed it has agreements with three manufacturers and a partial agreement with a fourth to recall 10,053 micro-mini motor homes, almost all built on Toyota chassis.

The agreements represent a breakthrough in NHTSA's four-year investigation of, and negotiation with, micro-mini motor home manufacturers to recall potentially dangerous vehicles they built between 1977 and 1986.

Many of the units involved were sold by new-car dealers.

The manufacturers include National RV Inc. of Perris, Calif., which agreed to recall 8,000 Dolphin-brand motor homes; Gardner Pacific Corp. of Vallejo, Calif., which will recall 906 vehicles; Coachmen Industries Inc. of Elkhart, Ind., which will recall 967 vehicles; and Leisure Odyssey Inc. in San Bernardino, Calif., which, thus far, has agreed to recall 180.

Tim Hurd, chief of media relations for NHTSA, said the agency is still discussing additional recalls with Leisure Odyssey and other manufacturers.

Last April, the agency determined there were 30 manufacturers who built an estimated 25,000 of the defective motor homes.

The vehicles have overloaded rear axles that can result in wheel bearing or axle shaft failure, causing the wheels to fall off.

They were built on Toyota's 5,500-pound gross vehicle weight mini pickup truck chassis.

An issue in the dispute had been whether Toyota encouraged the motor home producers to add too much weight to the chassis. The company has since developed a stronger 6,000-pound gvw rated chassis.

NHTSA is still determining which of the other manufacturers are still in business, which ones will agree to a voluntary recall and which may require a recall order.

NHTSA previously recommended that owners of the micro-minis should avoid unbalanced loads and minimize weight on the rear axle.

The motor homes were built on a chassis that had rear axles with a single wheel on each side, to which the manufacturers added dual rear wheels in almost all cases.

Correction

Buick is on a pace to sell more than 500,000 cars in calendar year 1991, a total more than 200,000 units below the division's 1986 sales. A punctuation error in the April 15 issue created an incorrect projection of Buick's 1991 sales.

Mitsubishi's strategy: Beat luxury rivals' prices

By David Versical
and Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTERS

DALLAS — In a bid to gain instant attention in the luxury car segment, Mitsubishi Motor Sales of America Inc. will offer a version of its new Diamante sedan for less than $21,000.

Mitsubishi's plan to beat the competition's pricing is one element of a strategy to break away from the pack of "second-tier" Japanese automakers in the United States. Within five years, Mitsubishi wants to pass Mazda and become the No. 4 Japanese brand in the United States, said Rick Lepley, senior vice president of sales.

Diamante's price will start at $20,495. The high-trim LS version, with standard anti-lock brakes and traction control, will start at $25,135, Mitsubishi told its dealers here last week. Both models have a driver-side air bag.

Dealers will receive their first shipments this month, and Mitsubishi will pitch the cars as lower-priced alternatives to Lexus, Acura and Infiniti.

"Drive the LS and tell me what $13,000 more gets you in a (Lexus) LS400," Lepley told dealers.

The Diamante is the first of several new products that are due from Mitsubishi during the 1992 model year:

- The Expo "sports wagon," a van-wagon hybrid, will be shipped from Japan soon and will go on sale in July, company officials said. A smaller counterpart, the Expo LRV, goes into production in July. Expo will start below $13,000 and the Expo LRV will start below $10,000.
- The next generation of the Montero sport-utility will arrive by the end of 1991.
- A restyled Eclipse featuring a new rear-end treatment and fixed headlights arrives this fall.

Mitsubishi's 1992 Diamante is being shipped to dealers this month; the base model carries a sticker price below $21,000.

The new products, as well as sales to its captive daily rental company will help Mitsubishi sell 213,000 vehicles in the 1991 calendar year, including 16,000 Diamantes, Lepley said. That compares with 190,730 last year.

Mitsubishi officials told dealers that the company has created the infrastructure to help support continued rapid growth.

A new captive finance arm, Mitsubishi Motors Credit of America, Inc., began operations this month. It will offer a three-tiered loan program when it begins accepting retail applications June 1.

The best credit risks will be charged 0.25 of a percentage point less than the rates charged by competitive captive arms, the company said. The highest risks will pay 0.25 of a point above.

Freightliner to cut staff, shut field offices

By Joseph Bohn
TRUCK EDITOR

NASHVILLE, Tenn. — Freightliner Corp. is sharply reducing its overhead to achieve a lower break-even point for the commercial truck market of the 1990s.

"We do it once, and we do it right," said Dieter Zetsche, president of the subsidiary of Germany's Mercedes-Benz AG.

Freightliner plans to get rid of 20 percent of its salaried employees, close several regional sales and warehousing operations and trim price increases it had negotiated with vendors.

Its goal is to be able to make money selling about 19,000 Class 8 trucks yearly, according to Zetsche.

The company had "slight negative results" last year selling 23,032 Class 8s, and its sales in the first three months of calendar 1991 dropped 10.2 percent below last year, according to the Motor Vehicle Manufacturers Association.

All heavy-truck makers are losing money on their manufacturing operations, according to Frank Prezelski, an analyst with Rothschild Inc. in New York.

Cummins Engine Co. of Columbus, Ind., for example, told analysts that it expects to report a $35 million loss for the first-quarter.

Cummins, the industry's major engine supplier, wants to reduce its break-even point to an incredibly low 75,000 to 80,000 industry truck sales, according to Prezelski.

Navistar International Corp. has also been furloughing employees and cutting overhead. Navistar reported a loss of $38 million in its first quarter, which ended Jan. 31.

Mack Trucks Inc. lost $285 million in 1990 and dragged parent Renault Vehicules Industriels into the red, according to RVI Chairman Jean-Pierre Capron.

Freightliner sales haven't been bad. It captured 22.9 percent of the Class 8 market in the first three months of this year, compared to 19.0 percent in calendar 1990.

But still, the company wants to "reduce our dependence on volume in a very important way," Zetsche said, predicting an "important improvement in our results" starting by year's end.

Zetsche, like other truckmakers, is looking for industry sales of 100,000 to 110,000 this year, down from 121,324 last year.

"The only way to be a long-term winner is if you have room in your cost structure to follow market trends going up or down," he said.

The company declined to say exactly how many salaried positions it plans to eliminate, though industry sources put the figure at 400 to 500. Freightliner has about 5,100 employees, according to Debra K. Nicholson, director of public affairs.

Reductions through attrition, layoffs and early retirements are expected to be completed by year's end.

Other shutdowns will occur more quickly.

The Chicago and Dallas regional sales offices will be closed May 1, and their activities will be absorbed by four remaining sales offices.

A Dallas parts distribution center will close by July 1, and its operations will be taken over by four remaining distribution centers.

Freightliner negotiated 1991 price increases with its suppliers last year, but has since gone back to renegotiate smaller increases.

Freightliner invested a record $100 million in a new medium-duty line of trucks in 1990 and 1991 and plans to invest another $200 million in U.S. operations during the next five years.

Sales again trail lackluster 1990 total

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

April started with more of the same bad news from the nation's sales managers. Despite a rise in consumer optimism, car and light-truck sales again trailed last year's tally. And last year was nothing to brag about.

Combined car and light-truck sales of 291,039 represent a 10 percent decline from the 1990 period.

Because there was one more selling day in early April this year, the daily selling rate fell even more sharply, down 20 percent.

The figures are in line with the year so far. March ran 14.9 percent behind last year, and the first quarter was down 18.9 percent.

Light-truck sales were off more than cars in early April, and imported trucks were off the most.

Industry light-truck sales of 99,565 were off 12.0 percent from April 1-10, 1990.

Relative to imports, U.S.-built trucks showed some strength, thanks in large part to Chrysler Corp. trucks, which were off only 600 units.

Minivan sales for the industry were particularly strong in March, up 32.1 percent, and likely contributed to Chrysler's success in early April. Chrysler does not release 10-day sales figures, but *Automotive News* estimates them.

Domestic truck sales were off 11.1 percent to 88,081 in early April; imported trucks fell 17.8 percent to 11,484.

Ford Motor Co. led the decline at the Big 3, with sales falling 13.4 percent to 74,801; both cars and trucks dipped.

Chrysler Corp. sales slipped 7.5 percent to 34,582 cars and trucks, and General Motors fell 7.4 percent to 113,064.

Dodge sales climbed 16.4 percent on a strong performance from domestic cars. Plymouth minivan sales rose 22.8 percent, but Jeep deliveries declined 24.7 percent for the first 10 days of the month.

GM lost ground in both cars and trucks, but Buick and Cadillac were up 15 percent. Oldsmobile and Pontiac held steady, and Chevrolet car-truck sales dropped 16.5 percent.

Cadillac sold 5,884 cars, while rival Lincoln dipped 25 percent to 4,230.

Among the Japanese, Nissan sales were off 26 percent, and Toyota dipped 17 percent.

Honda climbed 6.5 percent after falling with the rest of the market in January and February.

Tom Webb, chief economist for the National Automobile Dealers Association, said he was disappointed in the early-April results, as dealers' hopes were up based on a rise in consumer confidence following the Persian Gulf war.

In a prepared statement, NADA cited tight credit as a factor in "strangling" car sales.

Laforza: Body from Italy, bankruptcy troubles from all directions.

Judge orders new sale to find Laforza's value

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — A federal bankruptcy judge in California last week effectively nullified an earlier sale of some Laforza Automobile Inc. assets to Motor Sports International, an auto exporter based in Dublin, Calif.

The judge asked Laforza's trustee to reopen bidding on some assets of the luxury sport-utility company.

At a liquidation auction in January, Motor Sports International bid $401,000 for Laforza's intangible assets, including its name, engineering rights, applicable patents and proprietary technology.

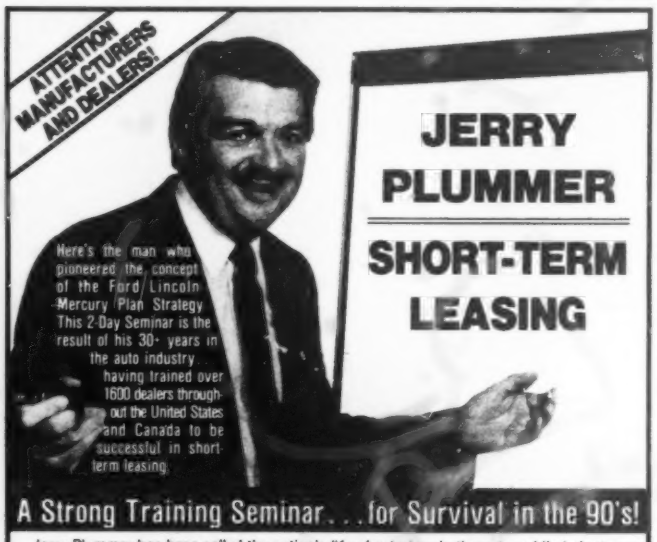
But Laforza's bankruptcy trustee was later urged by losing bidders to declare the bid too low and call for a new sale. Language in legal documents governing the sale was contradictory.

The judge gave the trustee one week to notify potential bidders and 20 more days to hold the sale.

Judge Edward Jellen said the winning bid this time for 13 of the $43,850 sport-utilities, some parts and equipment, and the rest would have to be more than $625,000 if the earlier sale is to be scrapped. The judge will require any successful bidder to pay $25,000 to Motor Sports International for legal fees and other expenses.

An attorney for the trustee said a second auction will be held for more than 250 vehicles still in the hands of C&C Inc. of Brighton, Mich., the firm that finished work on the sport-utility, whose bodies were imported from Italy.

Laforza, which began selling in 1989, was forced into involuntary Chapter 7 bankruptcy last August.



ATTENTION MANUFACTURERS AND DEALERS!
JERRY PLUMMER
SHORT-TERM LEASING
Here's the man who pioneered the concept of the Ford/Lincoln-Mercury Plan Strategy. This 2-Day Seminar is the result of his 30+ years in the auto industry having trained over 1600 dealers throughout the United States and Canada to be successful in short-term leasing.

A Strong Training Seminar . . . for Survival in the 90's!

Jerry Plummer has been called the nation's #1 sales trainer in the automobile industry. He has trained thousands of managers and salespeople to perform at full efficiency in today's selling environment. His showroom-leasing techniques have helped his dealers. . . .

INCREASE GROSS PROFITS
It's a fact, that an average, short-term lease increases a dealer's vehicle gross profit by 50% compared to a retail sale. That's big money you might now be missing, and a timely topic in today's market!

REPEAT BUSINESS
Almost two-thirds of short-term leasees re-lease or buy again from the same dealer. That compares to 20% or less on retail sales. Jerry Plummer's easy-to-apply strategies will show you how to earn substantial incremental profits, while increasing customer satisfaction!

USED VEHICLE PROFITS
Over 50% of all short-term leased vehicles at lease-end are purchased by the dealer for re-sale on the used-car lot. These two and three year old vehicles are prime profit opportunities! It's the only way to ensure future sales, and it can't be done without Jerry's training.

IF YOU'RE NOT USING SHORT-TERM LEASING TODAY, YOU'RE NOT IN THE CAR BUSINESS!

SHOWROOM LEASING SEMINAR
(2 Big Days) **May 9th & 10th, 1991**
Howard Johnson Plaza Hotel
Englewood, New Jersey

For dealers, managers and salespeople. Manufacturers and their lending-arms are welcome.
Space is limited—reservations are required. For more information or to register, contact:

GM wants to go green its way

Management statement favored over stockholder's proposal

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

General Motors stockholders are being asked to reject a proposal that the company become a signatory to a set of environmental principles created after the Exxon Valdez oil spill.

GM's board urges stockholders to reject the proposal, which is contained in the proxy statement for the 1991 annual meeting May 24 in Nashville, Tenn.

The board claims that a set of "General Motors Environmental Principles" developed after the proxy proposal was filed "best describes our commitment" to the environment.

The Retirement Plan for Employees of The Sisters of Mercy proposes that stockholders ask GM to formally commit to the "Valdez Principles," which were created in 1989 by the Coalition for Environmentally Responsible Economies.

The retirement plan making the proposal holds 10,500 shares of common stock.

Last year, the retirement plan, which then owned 7,900 shares, was one of three organizations backing a proposal asking GM to detail its involvement in space-based weapons research. The 1990 proposal failed, as do most proposals in corporate America that come from outside management.

The Valdez Principles call for protection of the biosphere, sustainable use of natural resources, reduction and disposal of wastes, wise use of energy, risk reduction, marketing of safe products and services, damage compensation, disclosure, appointment of environmental managers, and annual reviews of company progress in implementing the principles.

GM's new set of environmental principles say the company is committed to:

- Restoring and preserving the environment.
- Reducing waste and pollutants, conserving resources, and recycling.
- Educating the public about conservation.
- Research leading to implementation of technology that minimizes pollutant emissions.
- Working with governments to develop "technically sound and financially responsible" environmental rules.
- Assessing the impact of plants and products on the environment, with the goal of continuous improvement.

The principles were formulated in 1991, said GM spokesman Terry Sullivan, although he did not know precisely when they were approved by the board. That means GM's principles were developed after submission of the proxy proposal, which had to meet a Dec. 10, 1990, deadline.

"We see it as a success that these principles have led to board-level discussions," said Ariane van Buren, director of energy and environmental programs for the Interfaith Center on Corporate Responsibility in New York. The Interfaith Center is coordinating efforts to increase nationwide corporate concern for the environment.

But Sullivan maintains that GM's principles were not developed to deflect criticism at the annual meeting about the company's environmental practices.

"The (GM) principles represent the basic thrust of policies we've been operating under since the 1950s," Sullivan said. "Because of the growing interest in the environment, we thought it was time we outlined the spirit of those policies."

In other proxy news, GM Chairman Robert C. Stempel was the highest-paid company official last year, bringing home $1,074,695 in total compensation.

Stempel got a 20 percent increase in base pay, from $725,000 to $869,000, because of his promotion from president to chairman last Aug. 1, but his overall compensation was down 50 percent from 1989. President Lloyd Reuss made $926,979 last year, down 37 percent.

Former Chairman Roger B. Smith was paid $842,976 for seven months last year, a 67 percent decline. The shortfall is mitigated by richer retirement benefits granted to him and other executives last year, and by compensation he began receiving as a board member Aug. 1.

1990 GENERAL MOTORS COMPENSATION

	Salary	Bonus**	Stock options	Stock plan	Total	Percent change
Robert C. Stempel, chairman	$869,000	$115,000	$90,695	$60,813	$1,074,695	–50

Report: U.K. carmakers face tough times

By Vaughn Freeman
SPECIAL CORRESPONDENT

LONDON — Britain's passenger-car industry, already reeling from the most severe downturn in demand since the early 1980s, will be hard pressed to regain its former place in the sun during this decade, according to a report issued last week.

The forecast, by the *Euromotor Financial Yearbook 1991*, concludes that increased Japanese market penetration plus tougher competition from such car-producing countries as Spain will hurt even strong companies like Rover Group, Ford of Europe and Nissan Motor Co.'s British manufacturing subsidiary.

"By the end of the decade, Rover's interest in the car industry may be limited to the maintenance of its name on Honda-manufactured products and the holding of a minority stake in Honda's European operations," says Karl Ludvigson, managing director of Euromotor.

> "By the end of the decade, Rover's interest in the car industry may be limited to the maintenance of its name on Honda-manufactured products."
>
> **Karl Ludvigson**
> Euromotor

Honda owns 20 percent of Rover.

Even Nissan, the first Japanese carmaker to set up manufacturing operations in Britain, faces harder times ahead as the industry generally suffers, the report says. It notes that Nissan has lost money for the past six years on its huge Sunderland manufacturing operation.

"The reason is quite clear," the report says.

"The margins on added value are too low, and there is every indication that the company has been prepared to purchase market share with an uneconomic price structure," it added.

It also says there now must be "substantial" doubts whether Ford will continue to support Jaguar through the "many years required to create a profitable enterprise." Ford paid £1.6 billion (then $2.5 billion) for Jaguar in late 1989, which Euromotor says was "far, far too much."

It adds: "The U.K. as a place for car manufacturing will come under increasing competition in the 1990s, particularly from Spain, which will be an important rival."

British carmakers are suffering the worst drop in sales in 10 years. Sales in the first quarter were off 21.6 percent from a year earlier, to 456,730 units.

March sales were the worst for any March since 1981.

Truck dealers assail floating-discount price system

By Joseph Bohn
TRUCK EDITOR

NASHVILLE, Tenn. — Commercial truck dealers are trying to change what some call "nightmarish" pricing practices and inadequate warranty reimbursements for their repair work.

At the American Truck Dealers' 28th annual convention, George Rafferty, chairman of the group, pointed out the medium/heavy truck industry has no firm prices.

Rafferty: System is untenable

"The only firm price is the dealer's cost. And no trucks get sold for dealer cost except to dealers," he said.

Due to competitive equalization price assistance programs, dealers never know how much to sell a truck for until they call factory officials to see how much extra concession they'll allow on a deal.

Ultimately, many trucks are sold for 20 to 35 percent below cost.

"Gross profits on new trucks are so woefully small that a car dealer makes more on a $15,000 car than we make selling a $60,000 or $70,000 truck," said Rafferty, president of Chicago Kenworth Inc. in Markham, Ill. "It's untenable, really, for all the manufacturers and dealers. Somewhere along the way, we (medium/heavy truck manufacturers) lost our confidence and fought for a place at the lowest bidder table," said John Rock, vice president of customer sales and service for General Motors.

Rock: Resale values hurt

"In so doing, we have helped erode brand loyalty. And, I'm sorry to say, factories started doing a pretty good job of messing up the resale value as well," he added.

Rafferty said, "Everybody (manufacturers) tries to do it (weight concessions) on a relatively scientific basis. But the final reality rests with one guy, someplace, who in his omnipotent wisdom decides whether he wants to support that given transaction or not."

Don Kott, president of Don Kott Ford-Hino-Isuzu in Carson, Calif., said lack of uniform dealer prices is undermining the whole franchise system.

"Everybody could count on an invoice price that was inviolate. You could build your profits and everything from there. It guaranteed depreciation and involved a lot of other factors," Knott said.

> "Gross profits on new trucks are so woefully small that a car dealer makes more on a $15,000 car than we make selling a $60,000 or $70,000 truck."
>
> **George Rafferty**
> ATD chairman

"Frankly, that's been cracked with this competitive price adjustment deal. Today the (medium/heavy truck) franchisee out there has no idea what the hell his base cost is on some of these trucks."

Rafferty said manufacturers can price fleet deals with "some degree of reasonableness" because they know the quantity of vehicles involved, what their need for orders is and what their costs will be when a customer wants the trucks.

Still, he added, the issue of whether manufacturers offer the same discounts on all similar transactions in such deals remains.

Dealers also described poor reimbursements and confused policies for warranty work, though the association has been making some headway on this problem.

Typically, there are a variety of different warranties on a truck from suppliers, covering everything from engines to taillamps.

Rafferty said dealers need published warranty statements from all the suppliers, spelling out what they do and don't cover and how to collect on the repair work.

They also need better markups on such work, he added. In some cases, vendors continue to pay dealers in parts, rather than cash. Sometimes, they don't pay at all. Dealers often aren't reimbursed the handling costs for shipping a replaced part back to the supplier.

Some manufacturers, such as Mack Trucks Inc., and suppliers such as Cummins Engine Co. of Columbus, Ind., have begun responding to the problem.

Mack Trucks, for example, has begun paying retail rates for warranty labor and parts work, according to Fred Stevenson, manager of American Truck Dealers consulting services. Most other truck firms usually allow dealers a 25 percent markup on such work.

But negotiating better prices on a vendor by vendor basis will take "forever," Rafferty added.

ATD would like each truck manufacturer to administer all the warranties and service contracts relating to their vehicles.

"They could do it more efficiently and with greater clout than we (dealers) can because they're dealing with the same group of vendors. A small group at the OEM level could do what each dealer now has to do individually," he added.

Some manufacturers like GM and Kenworth Trucks have expressed interest in doing this, but view it as a long-term goal.

Truck business is shifting, says ATD award winner

By Joseph Bohn
TRUCK EDITOR

NASHVILLE, Tenn. — Don Kott graduated from college and began specing and pricing trucks at his father's dealership in Los Angeles. Despite selling a lot of Fords, Lincolns, Mercurys, Chryslers and Plymouths, he's been a truck man ever since.

Kott received the ATD/*Business Week* Truck Dealer of the Year award at the American Truck Dealers' 28th annual convention and exhibition.

Kott: ATD award winner

He will sell 10,000 cars and trucks this year at his Don Kott Ford, Don Kott Lincoln-Mercury and Carson Chrysler-Plymouth dealerships in Carson, Calif.

"The business has shifted, and it's continuing to shift," he said. "Some of the traditional trucks and truck lines that sold in the past are not being sold in volume, and they're probably not going to be sold in volume again."

Kott's sales are running 15 to 16 percent ahead of last year, due to his seeking out new markets.

He has developed a full-service maintenance lease for owner-operators, for example. It uses extended factory warranties to provide two-year, unlimited-mileage leases to operators for substantially less than lease companies charge.

Kott has been the top-volume dealer for Isuzu Truck and Hino Diesel Trucks for the past five years. He ranks 15th with Ford Motor Co. in total truck sales and ninth in total car and truck sales.

In handling national fleet accounts and operating an in-house leasing company and a daily rental fleet of 300-400 vehicles, Kott has sought to be in the "total transportation business" from the outset.

He built heavy-truck capability into his early dealership to help it compete against nearby Cormier Chevrolet, one of Chevrolet's largest dealerships.

Now, with a total complex encompassing 26 acres, Kott finds that he, like other dealers, has to contend with real estate management as a major concern.

BRIEFS

Truck dealer parley attracts big turnout

NASHVILLE, Tenn. — The economic downturn failed to dampen attendance at the American Truck Dealers' 28th annual convention and exposition.

American Truck Dealers, a division of the National Automobile Dealers Association, drew 1,801 to its conference.

The event at the Opryland Hotel attracted 80 exhibitors, three fewer than the 1990 convention, because of a lack of space, according to Gary Heimes, NADA director of conventions and expositions. He said five companies were on the exhibitor waiting list but there was no place to put them.

The 1992 convention, scheduled for April 11-14 at the San Francisco Hilton, will provide almost twice as much exhibit space at Brooks Hall, Heimes said.

The hall itself is almost twice as large as anything previously available to American Truck Dealers and the dealer group is planning its largest exhibition yet.

Mack seeks retirements

HAGERSTOWN, Md. — New contract provisions, approved by UAW Local 171, give 360 Mark Trucks Inc. shop employees and 10 office workers the option of early retirement.

Employees older than 55 with at least 10 pension-credited years of service can retire with a $300 monthly bonus in addition to their regular pension.

The bonus payments are available for up to seven years or until the employee turns 62.

Mack Trucks has about 928 active employees at the Hagerstown plant. The contract revisions were aimed at resolving a dispute between the UAW and Mack. It expires in October 1992.

DEALING WITH DEALERS

BEGINNINGS

Dan Atwood and **Keith Andrews** have opened Toyota of Temecula Valley in Riverside County, Calif.

Zimbrick Inc. has opened Saturn of Madison in Madison, Wis. **John Zimbrick** also has Buick, Honda, Mercedes-Benz, Saab, Isuzu, BMW and Acura franchises at other locations in Madison.

Robert Stillwell has signed with Range Rover for Stillwell Grand Prix Motors in Tucson, Ariz.

Truck Country of Wisconsin has opened in Oak Creek, Wis., selling Freightliner trucks.

Dealers who have signed with Chevrolet recently include: **Mark E. Graham,** Chuck Graham Chevrolet-Cadillac Co. in Bellefontaine, Ohio; **James F. Hattaway,** Hattaway Chevrolet-Oldsmobile Inc. in Blakely, Ga.; **James D. Hawkins,** Hawkins Chevrolet Inc. in Danville, Pa.; **Bradley D. Hubler,** Hubler Chevrolet-Oldsmobile-Cadillac Inc. in Bedford, Ind.; **Gary D. Hyland,** Emerald Chevrolet in Greene, Iowa; **Keith J. Matson,** Matson Motors Inc. in Warsaw, N.Y.; **Tom Roulette,** Courtesy Chevrolet-Geo in San Jose, Calif.; and **David B. Tipton,** Century Chevrolet-Geo Inc. in Birmingham, Ala.

TRANSITIONS

Broadway Chevrolet-Buick Inc. has opened on the site of the former **Deising Motor Co.** in Fond du Lac, Wis. The dealer will handle Chevrolet, Buick, Geo, Jeep and Eagle.

Brookside Chevrolet Inc. has relocated from Hartland, Wis., to Brookfield, Wis. The dealership is owned by **Walter Steffen** and **Daniel Johns.**

Pischke Motors Inc. has relocated within La Crosse, Wis., selling Plymouth, Dodge and Chrysler.

Crowley Lincoln-Mercury in Bristol, Conn., has opened a new 16,000-square-foot body shop.

ADVERTISING

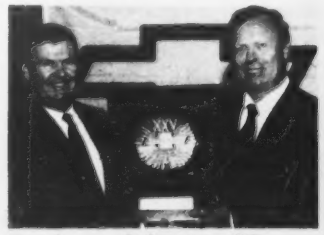
The **New York/New Jersey Peugeot Dealers Advertising Association** has awarded a 1991 Peugeot 405-S sedan to Gary Sabo of East Brunswick, N.J., winner of a hockey goal competition sponsored by the association.

Compiled by Greg Bowens

Anniversary
Jim Roberts Sr., center, and Jim Roberts Jr., right, of Roberts Jeep-Eagle in Auburn, Wash., receive a 25-year-dealer award from Bruce Walker, Chrysler's Portland, Ore., zone manager.

Hamilton has his day
William Hamilton, left, of Hamilton Nissan in Hagerstown, Md., receives a 20-year-dealer award from Robert N. Bibbs, Nissan Motor Corp. in U.S.A.'s Norfolk, Va., regional general manager.

King crowned with silver
Russell B. King, right, of Putnam Sales & Service in Putnam, Conn., receives a 25-year-dealer award from Bill Nicholson, New England zone manager for Oldsmobile.



Dealer celebrates 25
David L. Smith, right, of Dave Smith Motors in Kellogg, Idaho, receives a 25-year-dealer award from Don Campbell, Chevrolet sales manager west.

Pentler's 25th
Irv Pentler, left, of Uptown Motors in Milwaukee, is congratulated on reaching 35 years as a Lincoln-Mercury dealer by Ross Roberts, center, general manager of Lincoln-Mercury Division.

Silver Stoepel
Ken Stoepel, left, of Stoepel Ford-Lincoln-Mercury in Kerrville, Texas, receives a 25-year-dealer award from J.E. Bryce, sales development manager for Ford's Houston district sales office.

Guinn gets award
Steve Guinn, right, of Guinn Brothers Inc. in Henderson, Tenn., receives a 25-year-dealer award from Harold Hurst, Chrysler's Memphis, Tenn., zone manager.

Zimmer is silver
Dick Zimmer, left, of Zimmer Motors Inc. in Moscow, Idaho, receives a 25-year-dealer award from Lee Wetzel, marketing development manager for GMC Truck Division.

Japan exports less to U.S. in '90, but values are higher

Japanese automakers shipped fewer cars to the United States in 1990, but the average value of those cars increased.

The year-end automotive trade statistics from U.S. International Trade Commission illustrate a trend that has seen Japan increase production of smaller cars in the United States while boosting exports of larger cars. Last year marked the full year of Lexus LS400 and Infiniti Q45 shipments. And Honda began exporting its $61,000 Acura NSX.

In 1990, the average value of cars imported from Japan was $10,440, up 6.3 percent from $9,823 in 1989. In comparison, the increase for the industry in general was 4.2 percent.

U.S. automotive shipments to Japan, meanwhile, rose 75.3 percent last year.

That increase was due in part from Japanese transplants in the United States exporting cars to Japan. The average value of U.S. car exports to Japan climbed nearly 10 percent in 1990, to $17,375.

The increased U.S. production by Japanese manufacturers and the 75.3 percent jump in U.S. exports to Japan helped reduce the car trade gap between the United States and Japan by $904 million last year, or 4.6 percent.

Overall, U.S exports fell and imports rose last year. Those two trends combined helped push the the U.S. vehicle trade deficit 2.5 percent higher in 1990, to $42.67 billion.

Five of the 11 countries that export vehicles to the United States increased the value of shipments last year. The value of shipments from Mexico was up 84.2 percent. Others that rose were Germany, 16.8 percent; Italy, 12.0 percent; Yugoslavia, 11.8 percent; and Canada, 6.3 percent.

In addition to Japan, countries that saw a decrease in the value of exports included Brazil, 77.4 percent; France, 58.1 percent; Sweden, 7.5 percent; and United Kingdom, 5.2 percent.

The value of South Korea's exports also fell 29.7 percent. The country's biggest exporter, Hyundai, saw its U.S. sales for 1990 fall 25 percent.

The U.S. automotive trade deficit amounted to 42.2 percent of the country's total merchandise trade imbalance of $100.9 billion.

Addition of intercooler and changes to cylinder head help cut emissions of Dodge pickup with Cummins turbodiesel.

Dodge cleans up Cummins truck diesel

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Dodge is adding a charge-air intercooler and a four-speed automatic transmission to its successful Cummins turbodiesel-powered pickup truck.

Available at midyear, the new intercooler, piston and cylinder-head modifications are said to reduce significantly the emissions from Chrysler's most powerful pickup engine. Advertised horsepower and torque ratings are the same as last year's diesel.

Although horsepower is a middling 160 at 2,500 rpm, the diesel workhorse develops a whopping 400 pounds-feet of torque at just 1,700 rpm. Because of the engine's prodigious output, Dodge increased the size of the clutch pack in its A-518 four-speed automatic, which is already used in the gasoline-engine pickups.

Dan Sniesak, manager of vehicle development for large trucks at Chrysler Corp., said the modifications were made to "accommodate the government's 1991 emissions specification change." He said the trucks will even meet California's tough emissions standards.

Trucks with the new engines and Modine charge-air coolers are scheduled to begin arriving at dealerships this month.

Sniesak said the vehicles will have slightly better fuel efficiency, but work is still being done to derive "official" fuel-economy numbers. Some of the fuel economy gain in the automatic is available from the four-speed's taller extra ratio.

In the full-sized D350 pickup priced at $14,754, the diesel package with a heavy-duty driveline and suspension is priced at $3,628. The new four-speed automatic is $887 extra.

A club cab version of the diesel pickup will arrive at the end of July as an early 1992 model.

Rolls-Royce top exec to step down in May 1992

Rolls-Royce auto chief Sir David Plastow has one year left.

Plastow, 58, chairman and chief executive of Rolls-Royce parent company Vickers PLC, will leave in May 1992. He master-minded the luxury car makers' merger in 1980 with Vickers, which produces tanks and medical equipment.

Plastow, leaving under a company rule demanding that executive directors retire at 60, became chief executive of Rolls-Royce Motor Cars in 1971, took the car firm public in 1973, joined the Vickers board in 1975 and became chairman of Vickers in 1987.

He will be succeeded as chief executive by Sir Colin Chandler, 51, who has been Vickers managing director since January 1990. Succeeding Plastow as chairman will be Sir Richard Lloyd, the current non-executive deputy chairman.

Chevrolet ending incentives on '90s

Chevrolet will discontinue customer incentives on its 1990 cars and trucks after the current round expires May 5. Dealers said Chevrolet General Manager J.C. "Jim" Perkins made that announcement earlier this month.

On May 1, Chevrolet will cut its first-time-buyer incentive to $500.

One Chevrolet dealer applauded Chevrolet's effort.

"At some point they've got to stop," said the dealer, who did not want to be named. "We're starting buildout for 1991; its time to start ordering 1992s."

Mazda Motors of America is paying customers $1,500 on 1991 626 and MX-6 through May 2.

After making major changes earlier in April, automakers and importers announced no new national incentive programs last week.

Japanese makers switching to aluminum

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Japanese automakers will plunge further into aluminum during the next four years to address tighter fuel-economy demands in the United States and possibly Japan.

An unclassified cable from the U.S. Embassy in Tokyo reveals that Japanese carmakers are preparing to increase their use of aluminum bodies and components to reduce the weight of cars and trucks, possibly as early as 1993.

Japanese car companies have been concerned about the threat of a higher corporate average fuel economy standard as congressional debate gained momentum during the past year.

There have been suggestions that aluminum could play a major part in lightening the Japanese vehicle fleet without downsizing it, and the embassy's announcement helps focus attention on the strategy.

Congress is considering legislation that would raise the CAFE standard from its current 27.5 mpg to as high as 41 mpg. The Center for Auto Safety this month called for CAFE 45 mpg by 2000.

Although the Japanese fleets have traditionally led their U.S. competitors in fuel efficiency, the importers have done so primarily by manufacturing and selling large numbers of small cars. Their more recent ventures into larger and luxury-class cars have dragged down their fuel economy averages.

Last year, American Honda Motor Co.'s CAFE rating dropped from 31.6 to 30.8 mpg. The company introduced its fiery NSX sports car last year — ironically, one of the industry's only all-aluminum vehicles.

Toyota Motor Sales U.S.A., with its successful Lexus Division launch, also experienced a decline in CAFE ratings, from 32.1 mpg to 30.6 mpg. Nissan Motor Corp. in U.S.A. saw its CAFE rating drop from 30.4 mpg to 28.4 mpg, due in part to its new Infiniti line.

Most Japanese carmakers have instructed their suppliers to find ways to reduce component weight as much as 10 percent during the next two years. At the same time, the Japanese government is talking about setting new guidelines for fuel efficiency and is expected to make an announcement this fall.

Carmakers there are maneuvering to double their use of automotive aluminum by 1995. The cable from the U.S. Embassy and the U.S. Department of Commerce reports the content of discussions between Japanese automakers and Japan's powerful Ministry of International Trade and Industry. Based on those discussions, MITI is projecting an 11 percent annual growth in aluminum use by the auto industry for 1989-95.

Because the rate of growth for the more immediate 1989-93 period is only 9.7 percent, the numbers for 1989-95 indicate greater growth between 1993 and 1995. The MITI projections reveal that the carmakers plan to increase their aluminum demand to nearly twice the rate 1980 to 1985.

The numbers indicate a new vigor among the Japanese automakers to "light-weight" their future vehicles for export. Some officials within the Japanese industry fear that the group may be penalized more than their U.S. Big 3 competitors by substantial changes in CAFE standards.

MITI estimates show Japanese manufacturers plan to increase aluminum use from about 1.1 million metric tons a year now to 2 million metric tons by 1995.

Although some of the increase would stem from an overall growth in Japanese car output, the additional usage — a huge increase that U.S. observers believe the Japanese aluminum industry may be unable to accommodate — suggests that carmakers there plan sizable reductions in steel use.

MITI report projects a steep increase in the demand for aluminum plates and sheets, used mostly for body panels. By 1995, MITI reports, industry demand should more than triple to 190,000 metric tons a year.

Staff Reporter Mary Ann Maskery in Tokyo contributed to this report.

Japan's lack of aluminum an opening for U.S.

By Lindsay Chappell
and Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTERS

If Japanese automakers are planning to use more aluminum in their future vehicles, they will likely have to source more material from the United States.

U.S. aluminum industry officials say that Japan's lack of raw material capacity may create new opportunities for U.S. aluminum companies. Late last year, Aluminum Co. of America entered into a joint venture with Kobe Steel Ltd. that will start with soft-drink cans and will lead to auto business.

Alcoa is building a plant in Germany to supply Volkswagen AG in creating an aluminum-structure Audi model, a technology that interests Kobe. The vehicle is scheduled to reach the market by 1995.

Japan's Ministry of International Trade and Industry has projected that aluminum use by Japanese automakers will double by 1995.

The Japanese have been in the forefront in aluminum use but lack the capacity to produce aluminum ingot and scrap. With mounting pressure on Japan to use more U.S. parts, this could represent a new opportunity, industry officials say.

But the window of opportunity may be small. In the past six months, Japan's five major steel producers have announced joint ventures or acquisitions that signal a plunge into aluminum.

Despite the cost of aluminum, carmakers are moving forward. Nissan Australia announced last week that it will invest $22 million to increase the capacity of its aluminum casting plant by 60 percent. Isuzu Motors Ltd. is spending $44 million to build a new aluminum foundry for engine parts by 1993. Mitsubishi Motors Corp. is also expanding aluminum production.

AUDI

FROM PAGE 2

in September, Audi will replace its 80, 90, 100 and 200 lines with vehicles that are new from sheet metal to powertrain to suspension.

The 200 Quattro and the V8 Quattro with some engineering changes and a passenger-side air bag as standard equipment will be carried over into 1992. Audi's new 1992 lineup will include the front-wheel-drive 100 that will debut in September, followed by the 100 Quattro with automatic transmission, the fwd 90 and the 90 Quattro with automatic transmission.

Mugg admits that five years ago Audi had "troubles we didn't always handle very well. Troubles that left Audi badly wounded and in some disarray."

Audi's sales in the United States have declined each year since reaching a peak of 74,061 in 1985. Last year's sales were 21,106.

Audi's underlying problems with quality, dealers, marketing and customer satisfaction came to a head when its 5000 came under fire for alleged unintended-acceleration problems in 1986. Though the U.S. government eventually concluded that driver error was the cause of the problem, the situation led to a lack of consumer confidence and tarnished Audi's image.

Mugg said Audi has been working toward its market repositioning for three years by instituting innovative leasing programs, bumper-to-bumper warranties and the "Take Control" ads that stress driver control and safety.

Audi quality, Mugg said, is second only to that of Mercedes-Benz and better than that of Cadillac, which won the Malcolm Baldrige award for product quality.

Also, Audi weeded out what it considered to be weak dealers. Gone are those megadealers that Audi believed were too large to give its customers the attention they deserve and the dealers who just didn't have the customer base to support the franchise.

In the last two years, Audi has reduced its dealership body to 341 from 412. Of the 86 dealerships that departed, about six were terminated by the importer while the owners of the others either declared bankruptcy or voluntarily relinquished the franchise.

> Audi's current dealer body is better, more profitable — they actually sell our cars.
>
> **Richard Mugg**
> Audi of America
> vice president

The restructuring also included 71 major dealership-owner changes and 17 minor ownership changes and the addition of 15 new dealers. Mugg said Audi's current dealer body is "better, more profitable — they actually sell our cars."

But the first quarter of 1991 was perhaps the most difficult Audi has experienced in the U.S. market. January-March sales were 48 percent below the first quarter of 1990. Also, Lexus and Infiniti, the Japanese luxury cars, have taken a substantial chunk of the upscale car market.

Still, Mugg said Audi is "holding its own" in a down market and he is confident that Audi can carve a niche between other European luxury cars and Japanese luxury cars.

"We're not happy with today's numbers, but we're not discouraged," he said.

Other topics discussed during the session:

- Volkswagen and Audi will stick with their "no customer rebate" stance. "We will continue to market our products without rebates under the concept of honest value," said Young. The company will continue to offer incentives to dealers.
- Volkswagen sales were down 24 percent for the first quarter. A contributing factor, Young said, is that VW no longer sells cars to daily rental companies, per the request of its dealers.
- VWoA will spend $1 billion to expand its facilities in Mexico, primarily to serve North America.
- Jetta ECO diesels are being shipped to U.S. dealers. VWoA said the cars have more horsepower and torque and emit less smoke and noise than most diesels, but they will not meet California's 1994 emissions standards.
- Young would not make a 1991 sales projection. "We're not certain how the market will develop."

'Jolly John' unfazed by realty clash

SACO, Maine — "Jolly John" Pulsifer, owner of what was once the seventh largest auto dealership in New England, is not worried about a bank's threat to sell the land under his business, his lawyer says.

Pulsifer's southern Maine dealership has been operating under bankruptcy protection since August.

"His position is that the retention of all these properties is not essential to his reorganization as a car dealer. He is focusing on his main business, which is selling cars," said attorney U. Charles Remmel II.

Fleet Bank of Maine wants Jolly John Ford-Lincoln-Mercury out of the building it occupies so it can sell the real estate before the auto market rebounds, said Kathleen Barry, an attorney for Fleet.

"Obviously, the bank wants to sell at the right time of year," she said. "There has been some interest expressed by potential bidders."

Fleet plans to announce a foreclosure auction soon after April 29, when the 90-day, post-foreclosure period expires, said Barry. Under state law, former owners of foreclosed land have 90 days to repay the lender.

On Jan. 29, the bank was granted foreclosure of the land and building that comprise the 15-acre Jolly John auto mall in Saco. On March 25, York County Superior Court Judge Carl O. Bradford appointed Boulos Property Management Co. receiver of the property.

Because Jolly John Ford is operating under Chapter 11 bankruptcy protection, the handing over of the property to the real estate firm had little effect on the dealership's daily operations.

But at a hearing in U.S. Bankruptcy Court this week, Fleet will attempt to have the business evicted, Barry said.

Jolly John Ford listed assets of $4.1 million and liabilities of $6.9 million in its Chapter 11 filing.

The dealership owed $3.7 million to General Electric Capital Credit Corp. of Barrington, Ill. In November 1990, the creditor freed $1 million so Jolly John could continue buying cars to sell.

Nissan supplier wins $680,170 in arbitration

By Jean Halliday
CRAIN NEWS SERVICE

DETROIT — A three-member panel of the American Arbitration Association awarded $680,170 plus interest to Automotive Moulding Co. of Warren, Mich., according to documents filed in U.S. District Court here.

The award settles the supplier's 1989 lawsuit against Nissan Motor Manufacturing Corp. U.S.A. Automotive Moulding claimed that the Japanese transplant breached several contracts for auto parts, according to *Crain's Detroit Business*, a sister publication to *Automotive News*.

But the two sides are still arguing in court about the date on which the interest costs should begin. They are four days apart on the date.

The court's copy of the arbitration award calls for interest of "9.1 percent per annum from the date of the award to the date of actual payment."

In the suit, Automotive Moulding charged that it had been forced to buy materials from a supplier in Japan at a loss.

Automotive Moulding claimed that Nissan knew or should have known that the drip mouldings it ordered from Automotive Moulding could not be made in the United States using the material specified by Nissan.

The material, a specialized form of black resin, is produced only in Japan and is unavailable to U.S. manufacturers, the suit alleged.

3 plants hurt by rail halt

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

The one-day national rail strike last week forced three U.S. car plants to cut production.

General Motors' Van Nuys, Calif., facility lost four hours Thursday, approximately 265 units. Ford Motor Co.'s Chicago plant lost two four-hour shifts Wednesday and one four-hour shift Thursday, and the Atlanta car plant was forced to close Friday. Ford lost a total of 1,510 units.

U.S. automakers' estimated assembly of 111,055 units last week was 12.43 percent above the prior week and 0.26 percent below the year-ago week.

Year-to-date, U.S. car production trails 1990 by 10.54 percent.

Estimated truck production last week was 68,226, up 8.31 percent from the previous week and down 5.15 percent from the same week in 1990.

So far this year, 884,496 trucks have been assembled, 25.12 percent below last year.

The Oldsmobile and Pontiac lines at GM's Wentzville, Mo., assembly plant remain idle for model changeover. They are expected to begin producing 1992 models today. Also, the Buick line begins building the 1992 Park Avenue today.

GM's Flint, Mich., car assembly plant began producing the 1992 Buick LeSabre and Oldsmobile 88 Royale last week.

GM scheduled Saturday overtime last week at Lordstown, Ohio; Arlington, Texas; and Moraine, Ohio.

Ford scheduled daily and Saturday overtime last week at the Louisville, Ky., truck plant.

Chrysler's St. Louis (No. 2) truck plant worked Saturday overtime.

Canadian car production was estimated at 25,891 units last week, an increase of 29.55 percent over the prior week and 30.45 percent above the same week in 1990.

Year-to-date, 309,640 cars have been produced putting 1991's total 12.72 percent above 1990.

Truck production last week was estimated at 10,954, down 36.77 percent from the prior week and 40.32 percent below the year-ago week.

Year-to-date, truck production in Canada is 17.85 percent below 1990.

Mitsubishi dealers shed gimmicks to court luxury buyers

By Kristine Stiven Breese
and David Versical
AUTOMOTIVE NEWS STAFF

DALLAS — If Mitsubishi's U.S. past was oddly shaped cars called Tredia, Cordia and Starion, its future is reflected in the sleek, well-appointed Diamante.

And if its past was dealers who pushed price and promotions, its future is salespersons who see consumers as potential "customers for life" and treat them like guests at five-star hotels.

Those visions stood out like beacons during Mitsubishi Motor Sales of America Inc.'s recent dealer meeting here. And the transition from the young company's past to its hoped-for future will be marked May 10, when the Diamante goes on sale.

But the Diamante, which will range from $20,495 to $30,395, poses a dilemma. Mitsubishi dealers's sales practices fall well below the U.S. average, according to J.D. Power and Associates' sales satisfaction survey.

While the Diamante will be sold in existing Mitsubishi stores, it will compete against such please-the-customer heavyweights as Lexus and Infiniti, which are sold in brand-new showrooms designed to meet the buyer's every whim. And the disparity has left dealers wondering how they'll sell the Precis subcompact at one moment and then pitch the Diamante to a doctor the next.

The conflict is one result of a young sales body that has been supplied with an abundance of new product from Japan. In little more than three years, the U.S. operation has expanded from a company that specialized in small cars and pickups to include the likes of the current Galant sedan, the Eclipse sporty coupe and the hot 3000GT sports car.

The trend will continue later this year with a small van-wagon hybrid called Expo and a replacement for the Montero sport-

About-face! NADA chief wants consumer lures, interest rate subsidies

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Fearing a tide of dealership failures, the National Automobile Dealers Association is calling on manufacturers to jump-start car sales with customer rebates and manufacturer-subsidized interest rates.

The call reverses NADA's long-standing opposition to incentives paid to customers.

"We need to get this market moving right now, even if it takes short-term measures we don't like and have traditionally opposed, like consumer rebates and subvention programs," said Frank Anderson Jr., president of the association and owner of Sir Walter Chevrolet in Raleigh, N.C.

The association's surprising turnabout on customer rebates and the subvention programs, where manufacturers subsidize retail interest rates, underscores just how badly car dealers are faring in the recession. Fewer than 15 percent of its 20,000 member-dealers were profitable in January, according to NADA.

"We're bouncing off the bottom. Dealers are in pain, and if we don't get our engines cranking in a hurry, many of us are going to be out of business."

Anderson: "Dealers are in pain, and if we don't get our engines cranking in a hurry, many of us are going to be out of business."

Big 3 talks, Congress hears

Detroit visit turns up some who back trade limits

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Big 3's appeal to a visiting congressional delegation last week aroused support for re-examining trade relations with Japan and perhaps even using using the retaliatory powers of trade policy to help the U.S. auto industry.

Japanese manufacturers doing business in the United States could feel the bite on both their export business and their transplants. Members of the 40-member delegation that toured Big 3 facilities said they were convinced the Japanese could not only be dumping cars in the United States but not paying enough taxes on the profits from their U.S. transplants.

Aid from Capitol Hill for U.S. automakers would not require sweeping new legislation but action by the administration.

Congress does not have to engage in a long and controversial debate to assist the industry, said Rep. John Dingell, D-Mich. Under current laws, actions to address industry complaints about unfair trade practices and countries that keep U.S. cars out or make it hard for them to be sold can be taken by the president and various agencies and departments, including the International Trade Commission, and the departments of State and Treasury, Dingell said.

Indeed, the general mood of the 40-member delegation could be described as a depressed realization of the dire situation of the Big 3 and the intense pressure the industry feels from everything from overseas competition to rising health-care costs.

While visits to Ford Motor Co. and General Motors focused on safety, emissions, manufacturing and new technology, the delegation was most startled by the competitive difficulties and the health care issue.

Ford and GM carefully avoided stumping

Honda includes U.S. suppliers in '94 Accord design

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

HAMILTON, Ontario — Bowing to American trade pressures, Honda Motor Co. Ltd. has asked 43 North American suppliers to participate in the design of its next-generation Accord.

The suppliers will "participate with Japanese suppliers in the simultaneous design of the 1994 Accord," said David Nelson, vice president of purchasing for Honda of America Manufacturing Inc. in Marysville, Ohio, the assembly plant for most U.S.-sold Accords.

Crankshaft venture eyes Big 3, Page 46

Nelson made the announcement to a group of suppliers meeting in Hamilton last week.

Nelson acknowledged that the decision to include American suppliers in the early car development came shortly after an April 11 U.S.-Japanese industry conference in Chicago. At that meeting, Michael Far-

Britain hits 'limit' on Japan cars

Informal agreement for 10% of market illegal, commission rules

By Ed Wendt
SPECIAL CORRESPONDENT

LONDON — Britain's Monopolies and Mergers Commission, the equivalent of the U.S. Justice Department's antitrust division, provisionally ruled last week that British and Japanese automakers have illegally fixed the supply and price of "at least" 25 percent of the cars sold in the United Kingdom each year since 1975.

The ruling, in an April 19 letter to executives and members of the two countries' biggest industry trade groups — Britain's Society of Motor Manufacturers and Traders and the Japanese Automobile Manufacturers Association — said an informal "gentlemen's agreement" that fixed Japan's share of the U.K. market at 10 percent has acted to "prevent, restrict or distort competition" in the new-car market.

"The Commission have now provisionally concluded that . . . a complex monopoly situation exists . . ." in violation of the Fair Trade Act, the letter says.

Japanese exports to Britain declined 11 percent last year, to 234,499 units, and are "likely to decline again this year," a JAMA spokesman said in Tokyo. The decline reflects the continuing weakness of the U.K. market in general, he said.

Under Commission rules, a final ruling will be issued after a period of comment and forwarded to the Secretary of State. His decision, which can uphold or reject the Commission's recommendation, is expected in September.

Unlike many other nations, Britain has not forged a government-to-government agreement with Japan on the issue of car imports, choosing instead to leave it to unofficial channels.

The "voluntary" accord that limits Japanese passenger-car exports to the United States, for example, was negotiated on an official, government-to-government basis. Other nations, such as France, which limits Japanese penetration to 3 percent of the market, acted unilaterally, but officially, in imposing quotas.

British carmakers began talking with JAMA in 1975 following concern about the increasing import threat from Japan. The two trade groups, with the tacit blessing of their respective governments, then agreed to set a 10 percent ceiling on Japanese imports.

Although the Commission did not release any investigative findings with its letter, the pass-through effect of the fixed supply of cars has been higher prices. The European Commission, the executive arm of the European Community, and consumer groups have several times cited the higher prices of cars sold in Britain relative to comparably-equipped cars on the Continent.

Derek Barron, Chairman of Ford of Britain, an SMMT member, said the company will submit a written response to the ruling.

"This is a normal step in the commission's procedures," he said. "It raises certain public interest issues. It does not imply any wrongdoing or act against the public interest."

Other manufacturers declined comment pending a final ruling by the Secretary of State.

According to the Economist Intelligence Unit, the London-based research organization, the net effect of an affirmative ruling will be a rise in Japan's share of the U.K. market to about 15 percent by 1995. But it doesn't expect Japanese imports to "flood" the market.

"The Japanese are going to be prudent," said Ian Robertson, editor of the organization. "Even if the controls are removed tomorrow, they are not going to flood the U.K. market. They have been at it a long time and will be very careful about the rate they will build up their sales."

Ford, General Motors/Vauxhall, and Rover will be the biggest losers in an open market, Robertson said, and Toyota, Honda and Mitsubishi the biggest winners.

"What that means in terms of the current market is another 100,000 sales for Japanese imports," he said.

British makers' appeal for tax relief turned away

LONDON — Britain's Chancellor of the Exchequer last week rejected a call to provide tax relief to the nation's car industry, telling the heads of the four biggest U.K. automakers instead that they were no longer going to get "preferential treatment" from the government.

Far from rolling back taxes to stimulate industry sales, "We're going to establish a level playing field," a Treasury spokesman, speaking for Chancellor Norman Lamont, said.

"We want to help all manufacturers, not just carmakers," the spokesman said.

"There is no case for us to treat the car industry more favorably than any other section of the economy. Historically, they have been treated far more favorably," he said.

The four auto chiefs — Ford of Britain's Derek Barron, Paul Tosch of GM/Vauxhall, George Simpson of Rover Group and Geoffrey Whelan of Peugeot/Talbot — met with Lamont last Wednesday to urge him to roll back taxes they say will cost the industry 100,000 car sales and more than $1.5 billion this year.

In a 75-minute meeting at 11 Downing Street, the four told Lamont that a plan announced in his formal budget to require employers to pay social-insurance charges on the value of company cars they provide employees might well provide more than $1 billion in new revenue to the government — as projected — but would wreck the fleet-car market.

Fleet sales have been a traditional underpinning of the British industry because a high percentage of U.K. executives receive cars as part of their overall compensation.

The four told Lamont that the British Treasury already takes, on average, 21.5 percent of a new car's showroom price in taxes, a figure completely out of line with the rest of Europe.

The industry's sales, down 21.5 percent in the first quarter, could skid to as low as 1.6 million units this year from 2 million in 1990 and a record 2.3 million in 1989, Lamont was told.

Exports, which have been strong, could tumble to 400,000 units this year from 450,000 in 1990, they warned.

The Treasury spokesman said Lamont told the group the best hope for the industry was for "lower interest rates to bring about recovery. Reducing inflation will help everyone."

— Ed Wendt

Introduced in 1985, the Yugo GV remains the mainstay of the company's offerings. A few convertible versions have been imported.

Yugo America rehires co-founder Prior

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — It takes a true believer to see much future for Yugo America, but co-founder William E. Prior, a true believer if there ever was one, came back last week to run the company.

"I felt it was an opportunity I couldn't refuse," said Prior, 45.

He said the company's Yugoslavian bosses approached him in early April with a surprise offer to return as chief operating officer of Yugo, and he accepted.

John A. Spiech, 53, stepped aside last week after two years as Yugo president and chief executive. Spiech will return to consulting and says he will do some work for Yugo.

"This is perhaps as out-of-the-blue for me as it is for you," Prior said less than 24 hours after rejoining the company.

Under different management, the company ousted Prior 2½ years ago, went through Chapter 11 bankruptcy and hasn't recovered.

Prior said his first order of business is to formulate a "short-term emergency plan."

Yugo needs one. But if parent company Zavodi Crvena Zastava can afford it, it's not because of profits on the present sales volume in the United States.

In March, Yugo sold 146 cars, fewer than it did on an average day in 1987, Yugo's best year. Sales in 1987 were 48,812; last year's were 6,359.

Last month, the company laid off

Prior

Spiech

26 of its 89 employees, which was already considered "skeleton-crew" level.

If Yugo can survive its present crisis, Prior's task is basically the same as it was in 1988: to convince enough people that it's better to buy a new Yugo for $4,825 than a used car for the same price, or another new car for more money.

Yugo's biggest liability in doing that is the product itself — or more properly, according to the true Yugo believer, the product's reputation.

Hundreds of improvements have been made since the car was introduced in 1985. Steely eyed, unsentimental Yugo dealers with other franchises insist that the Yugo is "not a bad car — for the money."

"The car is now really good," Spiech insisted.

But the laughingstock reputation has outlasted many of the old Yugos.

Spiech was rumored to be leaving earlier this year. He said last week that Yugo was seeking a two- or three-year contract from its next

FTC seeks fleet subsidy info from NADA

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The Federal Trade Commission has been seeking information from the National Automobile Dealers Association on automakers' fleet subsidies and sales to daily rental fleets.

An NADA spokesman confirmed that the agency has made inquiries about program cars and fleet subsidies. But association officials declined to comment further except to characterize it as a "very preliminary investigation."

An FTC spokesman said only that the enforcement agency never confirms or denies ongoing investigations.

The FTC enforces more than 100 laws on pricing and trade regulations.

Matthew McKinnon, an instructor at the Detroit College of Law, suggested that the FTC could be looking into a potential violation of the Robinson-Patman Act, which forbids discriminatory pricing.

"It's a very complicated act that involves selling the same commmodity to customers at two different prices," McKinnon said when told about the FTC inquiry. "That could be what they are looking into."

For decades, manufacturers have offered discounts to big fleet purchasers — the "fleet subsidies" that NADA opposes.

Manufacturers sell vehicles to firms such as daily rental companies at prices lower than dealers can buy them.

The manufacturers argue that the prices are actually in parity because of retail and dealer incentives.

Still, dealers say manufacturers engage in two-tiered pricing and that franchised dealers should be able to purchase vehicles cheaper than anybody, including fleets.

It's an old feud. As far back as 1970, NADA asked manufacturers to halt fleet subsidies. Ford Motor Co. and General Motors agreed, starting with 1971 models, but Chrysler Corp. refused.

As a result, three Chrysler dealers sued in U.S. Distrcit Court. A federal judge ruled against them, and the U.S. Court of Appeals denied a request for an appeal.

In the mid-1980s, NADA sought federal legislation to halt the practice, but failed to get it passed.

Program vehicles are sold to daily rental companies then repurchased by the automakers at a prearranged price and sold to dealers for retail sale as used vehicles. The annual volume of program cars has grown to nearly 1.5 million.

Germany buoys European sales, prevents first quarter nosedive

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — New-car sales in Europe slumped 2.6 percent in the first quarter of 1991, with only the still-booming German market preventing a much steeper overall decline.

First-quarter sales dropped to 3,665,100 from 3,762,200 last year, according to industry estimates compiled by *Automotive News*.

But in Germany, the market rose 44.2 percent in the same period.

European sales fell 1.7 percent, to 1,323,700 in March, the eighth straight month of decline. But German sales surged 35.5 percent, to 424,100, according to preliminary estimates that also reflect sales in eastern Germany.

Without Germany, the Western European market would have declined 14 percent in the first quarter. German sales accounted for 29.4 percent of all cars sold in Western Europe, compared to 19.9 percent during first quarter 1990.

Part of the German surge is the result of continuing strong demand from the former East Germany, although those numbers were not isolated in the unofficial estimates. But the former West Germany is booming on its own. Although official three-month statistics are not yet available, registrations in western Germany in January and February rose 30 percent to 565,617.

But the news was gloomy in most other markets during the first quarter. Sales in the United Kingdom were down 21.5 percent; France declined 20.6 percent; Spain fell 22.8 percent, and Italy was off 1.9 percent.

Despite the slump, Volkswagen AG Chairman Carl Hahn said in an interview that he expects recessions in several major European economies to begin easing in the second half of the year.

"The automotive recession in some countries has been the result of government intervention in the market to bring down inflation," he said.

"Consequently, once the objective has been reached, you can also give some relief to the economy."

> "The automotive recession in some countries has been the result of government intervention in the market to bring down inflation."
>
> **Carl Hahn**
> Volkswagen

Hahn said the current European downturn has broken the normal cycle of a recession.

"Normally, a recession in a major economy lasts one year or less, but in England we have had a recession for more than a year, in Italy and France for half a year or so. So in the second half of this year, I think we will see the first signs of a turnaround — in Spain and England for sure and hopefully also in France and Italy."

In particular, Hahn cited strong economic growth rates in Spain, Europe's fifth-largest market, and prospects for additional momentum from the Olympics in 1992.

Some analysts expect the German market to slow considerably in the second half as higher gas and personal income taxes kick in. But Hahn said the German market will not slip into recession.

"We will miss one in Germany, and nobody will miss it," he said.

As for the overall European market in 1991, Hahn predicted "a little less than last year," when new-car sales totaled 13,382,000, just short of 1989's record of 13,400,800.

Volkswagen is riding the wave in Germany, where it has a commanding market share. It has been Western Europe's sales leader since the mid-1980s, and the group is pulling away from the field. Including the Volkswagen, Audi and Seat brands, the group held 16.4 percent of the market through the first quarter, compared with 14.4 percent for like 1990.

VW has widened its lead over second-place Fiat Group, which includes the Fiat, Lancia and Alfa Romeo brands. Fiat sales dipped 12.6 percent in the first three months and its European market share slipped to 14 percent from 15.6 percent in first quarter 1990.

Peugeot S.A., battered by the downturn in France, lost 1.2 percentage points of share and fell from third to fifth, with 11.6 percent of Europe's market.

Japan's volume in Europe rose 2 percent in the period to 400,800 units, a 10.9 percent share. But in Germany, Japan's penetration was 12 percent in the quarter from 15 percent for all of 1990.

"I don't judge that as anything," said Hahn. "It is just a matter of the length of their supply line. When suddenly the market exploded, they didn't have the cars."

New feature tracks key world market sales

By William R. Diem
ASSISTANT MANAGING EDITOR

With Germany buoying Europe and minicar sales rocketing in Japan, the U.S. automobile market alone was left to suffer agonizing losses for the first quarter of 1991.

A new feature of *Automotive News*, the monthly Global Tally, summarizes the world's three most important markets. But like all summaries, the bars on the graph conceal complex developments.

The 18.9 percent quarterly loss in the United States was spread across most car and light-truck segments and most companies. The economy was weak for months as 1990 ebbed, and the Persian Gulf war stopped retail buyers cold. If sales figures mask anything, it is the reliance of the Big 3 on fleet sales during the period. Sales to their semi-captive rental fleets proceeded at near normal rates, so the Big 3 loss of 20.6 percent during the quarter was caused entirely by an even sharper decline in retail buyers, estimated at 24 percent.

In Japan, a 7.5 percent loss in the primary car market during the quarter was more than overbalanced by a small gain in light trucks and a 26.2 percent rise in sales of minicars and minitrucks. Counting the minis, unit sales increased each month in the period.

Minicars and minitrucks are powered by engines under 600 cc — smaller than many motorcycles.

In Europe, a general collapse of car sales in all countries but Germany is masked by the success of the newly reunited country where 45 years of pent-up demand is beginning to be met (see above story).

The figures for Europe, based on industry estimates compiled by *Automotive News*, include only car sales because data on pickups and commercial vans are not always available from each of the 17 countries totaled.

Global Tally will appear monthly when figures from all three markets become available.

INSIGHTS

OWNER EXPENSES CLIMB: The annual cost of owning and operating a new car is up 13 percent in 1991 compared to a 7.8-percent increase last year, according to the American Automobile Association. AAA says total ownership and operating expenses for a new car driven 15,000 miles will be $5,601 this year, up $647 over 1990. Motorists will pay an average 37.3 cents a mile to own and operate a 1991 car, 4.3 cents more than last year. Costs are based on a composite national average for operating three domestically built cars: Ford Escort LX, Ford Taurus L and Chevrolet Caprice. They were equipped with air conditioning, automatic transmissions, power steering, power disc brakes, AM/FM stereos, cruise control, tilt steering wheels, tinted glass and rear-window defoggers.

EPA NUMBERS DON'T MATCH: Examining EPA fuel-mileage estimates for various classifications of vehicles against those reported by automotive fleets, management consulting firm Runzheimer International of Rochester, Wis., finds that vehicles within several categories in various fleets come close to EPA figures — but most fall short. A survey of fleet managers shows that compact cars in business fleets, subcompacts in utility and government fleets, and compact pickup trucks in business fleets match the EPA estimates, but most vehicles do not. According to Runzheimer, EPA figures represent the type of mileage that can be expected from various models of vehicles only under controlled laboratory conditions.

CALIFORNIA DREAM OVER? For whatever reason — droughts, earthquakes, a slowing economy or all three — more people are moving out of California than in. The reverse migration is identified by Mayflower Transit Inc., a long-distance mover which says California led all states in total number of outbound moves in 1990. It was the third straight year in which California experienced more outbound than inbound moves, a trend Mayflower says has continued into 1991. California was the only one of the 11 Western states in the continental United States that had fewer inbound (44.3 percent) than outbound moves in 1990. Oregon had the best performance (62.1 percent) of its interstate activity inbound, followed by Washington (61.2 percent) and Arizona (58.2 percent).

TRUCK-STOP DRUG-ABUSE HELP: The way is paved for truck stops nationwide to provide the first toll-free drug abuse "Helpline." Set to begin in late spring, it will be part of Operation Roadblock, an anti-drug program of the American Truck Stop Foundation and the National Association of Truck Stop Operators supported financially by Bridgestone Tire of Nashville, Tenn., and AT&T. The toll-free phone service allows trucking and truck-stop employees to call for immediate counseling or advice on where they may get help anywhere in the United States.

DATA FLASH: NCR Corp. of Dayton, Ohio, is introducing a nationwide radio data information service that notifies field engineers of customer hotline service calls within 45 seconds. NCR has a $15 million deal with ARDIS of Lincolnsire, Ill., a radio data information service company covering 50 states. The service allows mobile workers connectivity with host computers or with peers on the network. NCR already uses ARDIS in a few large cities.

STUDENTS PREP FOR NATURAL GAS EVENT: Two dozen teams of engineering students from schools across the country will vie in a natural gas-powered vehicle competition in Norman, Okla., June 6-12. They will compete by converting 1991 GMC Sierra pickup trucks to run on natural gas instead of gasoline, with emphasis on improving engine performance and fuel economy while reducing emissions. Scoring will be based on emissions, city and highway fuel economy, cold starting, noise and a dead-weight pull event. Awards will total $21,000. Sponsors include General Motors, SAE, the U.S. Department of Energy, the State of Oklahoma, and Energy, Mines and Resources-Canada.

VW CREDIT SCAN: V-Crest Systems Inc. of Warren, Mich., a member of Volkswagen Group, this month is introducing SCAN (Satellite Credit Card/Check Acceptance Network), a service which allows dealerships to use their satellite dishes for fast credit card and check authorizations. CNET Card Acceptance Services, a division of National Data Corp., is the payment system supplier for the network. SCAN is part of a satellite alliance formed last October by V-Crest and Scientific-Atlanta, supplier of satellite communication systems. The network supports more than 1,000 VW, Audi and Porsche dealerships.

A service which allows Volkswagen dealerships to use their satellite dishes for fast credit card and check authorizations debuts this month.

JOE WILSSENS

Lutz calls the program car problem "a monster that was let out of the box."

LUTZ DECRIES PROGRAM CARS

Chrysler Corp. doesn't plan to follow Ford Motor Co. into the used car business.

As Ford prepares to open dealerships selling only used rental cars this spring, Chrysler is seeking its own solution to the glut of program cars on the market.

"I think it's noble that Ford would try something different to get this problem handled," says Chrysler President Robert Lutz. "But I don't see how that's going to do it, because at the end of the day, you still have that number of almost-new units out there competing with your real new units."

Lutz calls the "program car conundrum" one of the automotive industry's worst nightmares. "It's a monster that was let out of the box," he says. "We have now trained a substantial number of our dealers to buy cars at auction and sell almost-new cars."

Says Lutz: "I jokingly refer to these daily rental units as a sort of mobile sales bank that has gotten registered. They're out there. They're registered. They come back at auction. Dealers buy them for thousands of dollars below our wholesale and sell them as almost new.

"A lot of these vehicles are substitutional for cars that dealers otherwise would have ordered from us at full wholesale price," he says. "It's a big, big unresolved problem," he adds.

Ford is promoting rental-car-only lots as a way to deplete the huge number of program cars that have flooded its inventory since automakers began turning cars over quickly by selling them to daily-rental companies.

Lutz says Chrysler is seeking a way to get out from under program cars without taking a huge one-time market-share loss.

"I don't know what the solution is right now, but I know we've got to have one.

"We've got to get this thing back into some reasonable proportion of our total passenger-car sales. The dilemma is how to get off this thing without taking a one-time, three- or four-month, devastating hit in market share."

The $30,200 "cab for everyone" uses the powertrain, running gear and front end of the C/K pickup.

TAXI FOR DISABLED IS HAILED

A design firm in St.-Laurent, Quebec, has built and put into service a taxi cab said to meet requirements of the physically disabled without compromising regular customer operation.

Vehicles designed for wheelchair access often are too cumbersome, too large, too costly and don't fit into service patterns of cab fleets. Nonetheless, it is expected municipalities soon will begin requiring cab companies to maintain at least some accessible units. Boston, for example, already has mandated that 5 percent of cab fleets in the city be so equipped.

A $30,200 "cab for everyone" was designed and built by GSM Design Ltd.'s GSM Production for GSM Taxi. It uses the powertrain, running gear and front end of General Motors' C/K pickup truck.

It is fitted with a waist-high, wrap-around bumper system aimed at minimizing costly cosmetic damage, said Morley Smith, president of GSM Design.

The taxi was designed originally for New York to replace cabs built by Checker Motor Corp. of Kalamazoo, Mich, but was redesigned to improve access by able, semi-able and wheelchair passengers.

"We've sold one vehicle to the Montreal Urban Transit Commission. It's leased to a private company and is operating profitably in 24-hour service," Smith said.

"My senior partner always wanted to build a sports car, and I'm a hot rodder at heart, but we wound up doing the taxi cab," Smith said.

"We think the cab is the forgotten link in the transportation chain."

OHIO-MADE SWITCHES FOR 1991 ACCORD BOUND FOR JAPAN

United Technologies Corp. is shipping power door-lock switches made in Zanesville, Ohio, to Sayama, Japan, at the rate of about 6,000 per month for installation in the 1991 Honda Accord.

United Technologies Automotive also sells about 60,000 of the switches a month to Honda for use in Accords and Civics built at Honda's Marysville, Ohio, assembly plant.

United Technologies said this is its first direct export to Japan.

Rockwell International's Plastic Products Division in Troy, Mich., is sending around 5,000 bumpers a month to Honda in Japan, also for the Accord.

But Rockwell's business is a temporary fill-in for a bumper maker there who has a capacity shortfall.

The plastic bumpers are made in Rockwell's plant in Lenoir, N.C.

INTEGRATED MANUFACTURING GETS GROUP FOCUS

The Society of Manufacturing Engineers in Dearborn, Mich., is launching a Networking and Communications in Manufacturing Group which will focus on integrated manufacturing.

"The group will have a far-reaching impact on manufacturing competitiveness in the global marketplace," says James F. Barcus Jr., SME president.

"The need to be globally connected will escalate in the coming decade, and networking and communications can facilitate that connection."

WAIT UNTIL NEXT YEAR FOR NEW-CAR GROWTH

After buoyant growth to 27.6 million units in 1989, total new-car sales in the United States, Western Europe and Japan faltered in 1990 to 27.2 million and are expected to slip further, to 26 million in 1991.

According to *World Car Forecasts — The Outlook for Sales, Production and Vehicles in Use to 1996*, published by The Economist Intelligence Unit in London, a slight improvement is forecast for 1992.

This improvement will continue to 1994, when the market is expected to peak at 30.7 million units, before dropping back to just under 30 million in 1996.

Short term, the report predicts:

- A bleak 1991 for car sales in the majority of West European markets.
- Further decline for the United States market.
- A Japanese market on the brink of sharp contraction.

Joseph DiMario, a PPG Industries scientist, checks test preforms.

RECYCLABILITY RISES FOR COMPOSITES

The automotive market is contributing to a down year for the fiberglass reinforced plastics industry.

"The current recession and loss of consumer confidence has hurt many of the industries that rely on composites, especially construction, transportation and marine," says Patrick F. Moore, vice president of reinforcement materials for Owens-Corning Fiberglas Corp. "We expect this cyclical slowdown to continue through most of 1991."

The forecast calls for a 4 percent drop in sales to the automotive market, following slight growth of 3 percent in 1990.

But the news isn't all bad. Composites grew at an average annual rate of 5 percent during the 1980s. And William Holtzclaw, chairman of the Society of the Plastics Industry Inc.'s Composites Institute in New York, says implementation of tougher clean air regulations will mean more use of pollution-control equipment.

Meantime, the SMC (sheet molding compound) Automotive Alliance, an industry consortium, is making headway in creating practical applications for recycled sheet molding compound materials and in developing recyclable composites.

A recent study reports that recycled sheet molding compound "is a valuable raw material that contributes to the physical properties and can be used in the design and production of new composite parts."

Typical applications for recycled sheet molding compound could be non-appearance auto parts such as interior body panels or computer housings.

"The composite could have the same strength as it did before recycling, but wouldn't have the same surface quality," says Dr. W. David Graham, researcher at the Owens-Corning technical center in Granville, Ohio.

Recycling sheet-molded compound in this manner is said to offer several benefits to the composites industry:

- All of the compound is reused, completely removing it from the waste stream.
- Off-the-shelf equipment, formulation techniques and molding technologies can be used.
- Investment needed to recycle is manageable, even for a modestly sized molder.

But several issues still need to be addressed before recycling can become available, according to the study.

Balancing Act

Overall fleet sizes won't change despite a drop in fleet purchases according to NAFA's 1991 survey

By: Charles M. Thomas

All fleet managers face the same fear every working day: that a memo from the head office will appear in their mailbox saying the company will stop providing vehicles to employees and instead will reimburse employees for the use of their own vehicles.

Such a shift in policy would of course eliminate the need for fleet managers.

But a new survey by the National Association of Fleet Administrators concludes those kinds of memos are unlikely. Members responding to the survey believe their companies will continue to provide vehicles to sales and service employees and executives rather than to reimburse them for the use of their personal vehicles.

"Compared to results of the 1990 survey, this year's fleet vehicle purchases are down," says David P. Lefever, NAFA's executive director.

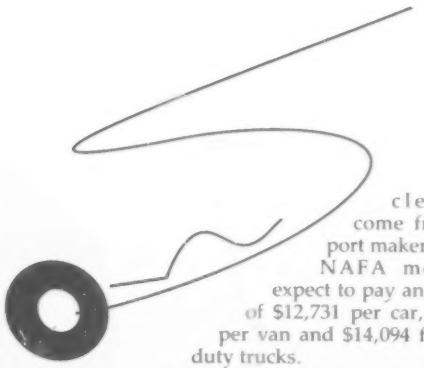
But he adds: "Overall fleet sizes, however, will not change significantly."

According to the survey, 57 percent of respondents plan no substantial changes in their fleet operations. While 14 percent of responding members plan to decrease the number of vehicles in their company fleets, 13 percent say they will increase the number of fleet vehicles. The remaining 15 percent declined to reveal their plans.

NAFA membership consists of more than 2,000 fleet managers in the United States and Canada. They are responsible for approximately 2.7 million vehicles.

Fleets are expected to purchase or lease more than 108,000 vehicles this year at a cost of $1.5 billion.

Members will purchase 38.6 percent of the vehicles from Ford Motor Co., 35.3 percent of the vehicles from General Motors, 23.4 percent from Chrysler Corp. A scant 2.7 percent of the vehicles will come from import makers.



NAFA members expect to pay an average of $12,731 per car, $14,547 per van and $14,094 for light-duty trucks.

Their main reasons for selecting vehicles focus on cost, job suitability, economy of operation, repair record and service record. Lower on the list are image and prestige, and driver preference. Safety and resale value are also concerns.

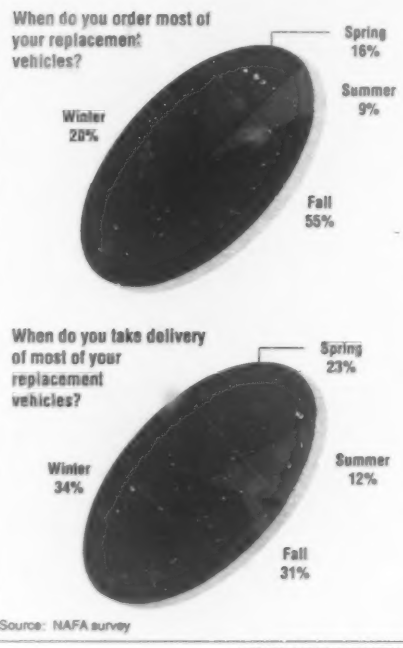
More than half of the respondents said manufacturer option packages have affected their choice of vehicles, with 70 percent choosing the same vehicles as in the past, but with more options at higher costs.

The fleet trend is toward driving more miles and holding onto vehicles for more months before turning them over.

According to NAFA, the average fleet vehicle is driven 2,057 miles each month, with personal use accounting for 339 miles or 16 percent.

Personal use of a company vehicle is allowed by 83 percent of the respondents. □

Fleet orders and deliveries



Source: NAFA survey

AUTOMOTIVE NEWS / CHARLOTTE WINTER

OPTIONS THAT RANK HIGH WITH FLEET MANAGERS

Heading the list of options selected by fleet managers for fleet vehicles are air conditioning, automatic transmission, dual side mirrors, tinted glass and, for all but subcompact vehicles, all-season tires.

Other favorite options include:

- Subcompacts: floor mats, power brakes, power steering, four-cylinder engines.
- Compact cars: AM/FM stereos, power brakes, power steering, pulse wipers, rear defrosters and four-cylinder engines.
- Mid-sized cars: cruise control, floor mats, power brakes, power steering, pulse wipers, rear defrosters, six-cylinder engines.
- Full-sized cars: cruise control, floor mats, power brakes and steering, pulse wipers, rear defrosters, tilt wheels, six-cylinder engines.
- Luxury cars: AM/FM cassette stereos, cruise control, digital clocks, power brakes, power locks, power seats, power steering, power windows, pulse wipers, rear defrosters, split front seats, tilt wheels, fuel-injected six-cylinder engines.
- Minivans: power brakes, power steering, six-cylinder engines.
- Full-sized vans: power brakes, power steering, six-cylinder engines.
- Light-duty trucks: power brakes, power steering, six-cylinder engines.

— Charles M. Thomas

HONDA

FROM PAGE 1

ren, U.S. undersecretary of commerce for international trade, warned Japanese carmakers that trade with the United States could be damaged unless they rapidly increase their purchases of U.S.-made parts.

Honda has involved U.S. suppliers in various stages of its car development, including the U.S.-engineered adaptation of the 1990 Accord into a station wagon last year. But this marks the first time it has invited them to participate in the complete development of a new product developed in Japan.

Honda didn't identify the 43 suppliers. But a company spokesman said they include Japanese firms with North American manufacturing operations and U.S.-Japanese joint ventures.

Honda's move came just a week after the conference in Chicago between Japanese carmakers and U.S. suppliers. At that meeting, U.S. trade officials warned of political repercussions if the Japanese industry doesn't increase its imports of North American componentry.

Many U.S. suppliers have been stumped in their efforts to sell to Japan's carmakers because the Japanese system requires suppliers to participate in the earliest stages of a car's development. U.S. suppliers complain that Japanese suppliers have more access to carmakers there and are favored for the early stages of work.

"Yes, it's partly because of the political pressure," Nelson said. "The plan to do this was always there, but obviously it's now being pushed ahead."

He said that incorporating U.S. suppliers into the design stage has been inhibited by limited resources in Honda's North American product development operations. Honda plans to expand its operations at Honda Research and Development of North America Inc. in Marysville from 300 people to 600 by 1992.

"Quite simply, we haven't had enough product development capability in the past to cope with all of the components that you want to sell us," he said last week to Canadian and U.S. suppliers at the annual meeting of the Automotive Parts Manufacturing Association of Canada.

Honda invited the 43 suppliers to meet with its North American research and development group two weeks ago in Marysville to discuss details of the project.

With "simultaneous design," a vehicle and its components are developed at the same time — a procedure that requires carmakers to select suppliers early in the development process, before parts specifications are determined.

The Honda spokesman said other North American supplier firms will be added to the list, but that some of the original 43 may drop out.

Auto parts are the largest piece of the United States' $41-billion trade deficit with Japan, accounting for about $10.5 billion a year.

Honda has been one of the most aggressive Japanese carmakers in sourcing North American components. Last year, its Ohio-built Accord became the first U.S.-assembled Japanese brand car to reach the level of 75 percent domestic. Its 1992-model Civic, also built in Ohio, should reach the 75 percent level later this year.

Nelson said Honda now spends $2.88 billion a year to purchase parts from 237 suppliers in the United States. Roughly half of those suppliers are Japanese-based companies in the United States or joint ventures with Japanese companies. He said Honda spends another $300 million with suppliers in Canada.

HYUNDAI

FROM PAGE 3

and interior, Chon noted.

The company also is continuing to talk with Chrysler Corp. about the possibility of supplying the U.S. automaker with the upcoming Y3, the successor to the Sonata, he disclosed. An earlier accord to supply Chrysler with 30,000 Sonatas a year from the Hyundai plant in Bromont, Quebec, fell through when Chrysler backed out.

To pick up the slack caused by the drop in U.S. car sales, Hyundai is making an aggressive push into the European market, including Eastern Europe and the Soviet Union, Chon said.

> "If the domestic market wasn't so strong last year, we'd all be bankrupt."
>
> **Chon Song-Won**
> Hyundai president

"We didn't have enough capacity to serve the European market for the last four years," he noted. "Now, we're expanding to Europe."

While the Soviet market holds out great promise, Chon believes "it's too early to say anything."

With the drastic slump in exports, Chon says he has been grateful for the sales boom in the Korean market, which has been expanding at rates of 25 to 40 percent a year for the past three years.

"If the domestic market wasn't so strong last year, we'd all be bankrupt," he quipped. "We were lucky to switch so smoothly from exports to domestic sales."

A slip in Hyundai's home-market share, from nearly 59 percent in 1989 to 53 percent last year, is no cause for concern, he said.

"It is an expanding market, and we lost 30 days of production because of labor troubles," he said. "We are still in our normal band, 50 to 55 percent of the market."

One of the keys to Hyundai's long-term success will be the elimination of the antagonistic feelings that have tainted management-labor relations, he said.

"Labor management relations in Korea are still at the infant stage," he said. "Unions are just three to four years old. In the first year, it was really very difficult. They were all shouting at the table. Now they're talking," he explained.

Last week competitor Daewoo Motor Co. continued to lock out 12,000 striking workers at its Pupyong assembly plant. The workers struck after a union leader was arrested to be questioned about work stoppages and slowdowns.

The Japanese auto industry suffered through similar growing pains in the early 1950s, he observed. It was fortunate enough to escape major havoc.

According to Chon, the Korean industry has been less fortunate. Just as it was attaining a significant scale, it was hit overseas by an export slump and the ascent of Japanese transplants while, at home, labor-management problems began to flare as a result of Korea's democratization in 1987.

"We say repeatedly: 'Ten years ago, there was a hungry spirit. Now, no hungry spirit.' We say to our workers, 'You must work hard to enjoy life, otherwise this country will become like Latin America, a basket case,' " he concluded.

Gelgota quits VW marketing job

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

William A. Gelgota Jr., who helped launch Volkswagen's *fahrvergnugen* advertising campaign, resigned April 11 as director of marketing for Volkswagen United States Inc.

Gelgota: It felt like the right time to move on

Gelgota, reached at his metropolitan Detroit home, said he left VW because he wants to spend more time with his family and to pursue other interests.

He said that after conversations with William J. Young, president and chief executive officer of Volkswagen of America, and John Kerr, president of VW North American Operations, his resignation "works out for the best."

"It was a good six years; it just felt like the right time" to move on, he said.

Gelgota said he is "keeping all options open" from a career standpoint and in the immediate future will spend time with his wife and two young sons.

Young was out of town and could not be reached for comment. Donna Boland, a VW spokeswoman, said no replacement for Gelgota has been named.

Ron Dusenberry, VW advertising manager, is overseeing the day-to-day work of the department, she said.

The *fahrvergnugen* campaign, which began Feb. 1, 1990, has heightened awareness for the German manufacturer but has done little to generate sales.

Gelgota said the campaign is still evolving and the next phase will talk more about the product.

Volkswagen sales were down 24 percent for the first quarter of 1991.

Gelgota joined VW in 1985 as manager of advertising and was named marketing director April 1, 1989.

Prior to joining Volkswagen, Gelgota was vice president and management supervisor at the J. Walter Thompson advertising agency in Detroit where he worked on the Ford Division and the Ford North American Automotive Operations accounts.

Gelgota also worked at Lintas:Campbell-Ewald Co. in Warren, Mich., where he served in the agency's merchandising and field-dealer advertising departments for the Chevrolet account.

FIREHAWK

FROM PAGE 3

has already received 20 orders. Production starts in July with a maximum build rate of five Firehawks per week.

SLP, which stands for Street Legal Performance, modifies stock Firebirds to provide enormous horsepower and torque gains with custom-made parts and parts from GM's Performance Parts Catalog.

At present the most powerful Firebird delivers 240 hp. And its 350-cubic-inch V-8 is available only with a four-speed automatic. The Firehawk's 350 V-8 makes 350 hp at 5,500 rpm and generates 390 pounds-feet of torque at 4,400 rpm.

Some of the important changes are a beefed-up engine block with four-bolt main bearing caps, a steel crankshaft, forged connecting rods, "light-weight" pistons, modified Corvette cast-aluminum cylinder heads, a high-flow intake manifold, a special high-performance brake system, stiffer suspension bushings, a stronger driveshaft and rear axle, a high-flow stainless steel exhaust system and the Corvette's ZF six-speed gearbox.

For customers not satisfied with the "base" Firebird Firehawk, there's an optional "competition package." It includes an aluminum replacement hood, Recaro driver's seat with factory upholstery and five-point seat-belt system, a six-point padded roll bar and rear-seat deletion. And because what goes fast must also slow down, SLP fits four-piston Brembo brake calipers with vented and cross-drilled rotors. These are the same ultra-high-performance brakes used on many Indy-style race cars and the exotic Ferrari F40.

Sundance, Shadow gain first-time-buyer bucks

Chrysler Corp. announced a $500 first-time buyer incentive on some 1990 and 1991 Plymouth Sundance/Dodge Shadow models. The payment can be added to other national consumer incentives. Included are 1991 Sundance America/Shadow America, 1991 Shadow convertible and 1990 and 1991 Highline models.

National Sundance/Shadow consumer incentives are: 1991 Highline, $500; 1991 Shadow convertible, $1,000, and 1990 Highline, $700.

Chrysler describes a "first-time" buyer as a person who has never purchased or leased a new car from any manufacturer.

The first-time buyer program is in lieu of Chrysler's college graduate, military graduate, Advantage Gold Key Leasing, employee purchase or direct-mail certificate incentive offers.

Toyota Motor Sales U.S.A. is paying rebates to dealers based on performance against quotas. The payments, which include 1989 models as well as 1990s and 1991s, are $200 to $1,200 on Camry, Corolla, Celica and pickup trucks.

The program will expire on June 3.

Would-be Alfa dealers win $2.4 million

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

VAN NUYS, Calif. — A Southern California jury last week found the former Alfa Romeo Inc. guilty of reneging on a contract involving two used-car dealers who had signed a letter of intent to open an Alfa dealership.

The company now is called Alfa Romeo Distributors of North America Inc.

The dealers were awarded $2.4 million, including $1.5 million in punitive damages. The jury found that such a document from a manufacturer or distributor is a binding contract.

Jim Moors, an attorney in the legal department of the National Automobile Dealers Association, said contract rules vary from state. "A letter of intent could very well be considered a contract depending on what the parties agreed to," he said. "If they agreed to the awarding of a franchise and a dealer started to build facilities and make other arrangements to open a dealership, grounds could exist for the court to find that the letter of intent is a binding contract."

The plaintiffs, Carl Loizzi and William Marano, filed suit in February 1986. According to their attorney, Leonard Comden, the pair planned to open a facility based on the letter of intent they had received from a district manager. But then they received a "Dear John" letter from Alfa Romeo saying that the company was not going to honor the letter of intent.

Loizzi and Marano were converting one of their used-car facilities to an Alfa Romeo store. Comden said his clients were working with a "list of about 10 to 12 things that Alfa had asked them to do to the facility" to get it up to specification.

When Alfa Romeo decided to go with another dealer in the area, Comden said, his clients were simply told their facility was too small. "That was not one of the points in the letter of intent," he said, so it caught them by surprise.

Comden said Alfa Romeo gave the franchise to a Volkswagen dealer in the area, La Torre Volkswagen-Alfa. Since then, La Torre has parted with Alfa Romeo.

Loizzi and Marano claimed they were led to believe that the letter of intent was a contract. They said Alfa and its regional managers misrepresented their intentions in regard to awarding the franchise.

Comden said Alfa Romeo claimed the letter could not have been a contract because it was signed by a regional representative, not an officer of the company. Comden said his side presented evidence showing that in similar instances, Alfa Romeo honored a district manager's signature.

The jury awarded compensatory and punitive damages for breach of oral and written contract, fraud and conspiracy to defraud, bad faith denial of contract (the standard that opened the door for punitive damages) and infliction of distress.

Ed Siegler, attorney for Alfa Romeo, declined to comment on specifics of the case. He said his clients have "not yet cleared a position statement," about the verdict. Siegler said an appeal is "under consideration."

Venture to sell steel crankshafts to Big 3

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

International Crankshaft Inc., a new joint venture between Japan's Sumitomo Metal Industries Ltd. and Masco Industries Inc. of Taylor, Mich., will begin producing forged-steel crankshafts in the United States next year.

The plant signals a new level of high-tech component production in the United States based on Japanese technology. Most U.S.-made cars contain cast-iron crankshafts. The stronger and lighter steel components are in increasing use among Japanese carmakers.

The venture's $40-million plant in Georgetown, Ky., will begin production in April 1992 and will build up to 800,000 a year. Plans call for selling to some Japanese carmakers with U.S. engine assembly operations, and to the Big 3.

Until now, most Japanese transplant carmakers have installed engines assembled in Japan. Both Nissan Motor Manufacturing Corp. U.S.A. and Toyota Motor Manufacturing U.S.A. Inc. are increasing the domestic component level of their U.S.-installed engines. Other transplants may do the same.

"Chrysler, Ford and General Motors are already using steel in some trucks, and they are looking at steel for automotive applications now," said Daniel Condon, vice president of the venture. "The trend in Japan is away from iron to steel crankshafts. Everybody seems to believe the Big 3 will follow the Japanese trend."

International Crankshaft plans to supply Toyota's engine plant in Georgetown. The operation will produce up to 800,000 crankshafts annually, with commercial production scheduled to start next April.

The venture also is planning to target Nissan, which assembles engines in Smryna, Tenn., and is constructing a $500-million engine plant in Decherd, Tenn.

International Crankshaft is 19.9-percent owned by Masco and 80.1-percent owned by Sumitomo.

CONGRESS

FROM PAGE 1

for retaliation against Japan and more protection from Congress. But the stage for persuading Congress to wage a trade war was set almost immediately after the delegation landed last Thursday and was whisked off to visit with top UAW leaders and Chrysler Corp.

Chrysler Chairman Lee Iacocca said the Big 3 will lose $4.2 billion during the first quarter of 1991, significantly more than the $3 billion Wall Street had anticipated.

Iacocca also outlined an eight-point trade program for Congress that included the plea for cutting Japanese imports by 500,000 this year.

"We were told we have to do our job," said Marcy Kaptur, D-Ohio, and co-chairman of the Congressional Competitiveness Caucus. The group planned the trip a year ago, before the current recession.

Iacocca's pleas were similar to those swiftly rebuffed by the Bush cabinet and the president himself last month. But members of the delegation were more sympathetic than the White House, and several said they were stunned to hear Detroit say that Japanese transplants not only pay little, if any, taxes but also control nearly 37 percent of the market in the United States.

While Washington is in the midst of debating increases in the corporate average fuel economy standard, the issue was not stressed during the two-day visit, Kaptur said.

At two of the companies, the issue came up only because members asked executives how they felt about a 40-mpg standard, she said.

At the the UAW, the legislators heard a a 20-minute presentation from UAW President Owen Bieber, who urged rejection of the proposed free-trade agreement between the United States and Mexico, pleading it would lead to a loss in jobs. The union's stand was news to some congressmen, including Joe Barton, a Republican from bordering Texas. "I thought the union supports 'fast-track' approval of Mexico," said Barton, referring to the Bush administration's desire to expedite the deal with minimal debate.

From there, the congressmen took a bus tour of the Chrysler plant on Jefferson Avenue, where a new plant will open next year to replace a torn-down facility.

Chrysler unveiled 10 cars that it will introduce from 1992 to 1996 and then unleashed Iacocca; Robert Lutz, Chrysler president, and Robert Miller, chief financial officer.

On Friday, the 40 congressmen went to a Ford test site and witnessed the crash of a Taurus equipped with an air bag in the standard 30-mph crash all cars must pass to be certified. Veteran racer Jackie Stewart took the less faint-of-heart around the test track in a stock SHO Taurus.

The tour of the Cadillac Detroit-Hamtramck plant took more than 1.5 hours. The tour caused former Detroiter, Rep. Barbara Rose Cardiss Collins, to ask, 'What happened to this plant?"

She lamented the plant could run on two shifts but only one was running and on reduced hours, a reality that sharply contrasted with her childhood memories of Detroit as the busy hub of a prospering automotive industry.

Rep. James Scheuer, D-N.Y., even suggested Congress take a "fresh look" at the anti-trust laws that were drafted to keep U.S. companies from colluding and conspiring with each other to see whether provisions can be made to allow U.S. companies to work with each other to compete against European and Japanese companies.

At the final press conference, attended only by eight Congressmen, members' comments were spiced with "I'm sorry 535 of us weren't here," from Rep. Ralph Regula, R-Ohio, to "there will be an important ripple effect from our visit," by Rep. John Conyers, D-Mich.

Would the industry recover if the government gives it what it wants?

No, said Rep. Sander Levin, D-Mich. "But all three companies have a sense we can do better and do more," Levin said.

The industry wants government that works with it, "not against it," Levin said.

'Jolly John' closes doors: 'I'm broke'

SACO, Maine — Flamboyant auto dealer "Jolly John" Pulsifer, who once owned one of the largest Ford dealerships in New England, has called it quits.

"Two years ago, I'm a multimillionaire; today, I'm broke," Pulsifer said. "I lost my house — everything."

The troubled Ford dealership, once the seventh largest in New England, had been operating under Chapter 11 bankruptcy protection since August, but Fleet Bank called for a hearing to evict the dealership from its quarters.

The dealership listed assets of $4.1 million and liabilities of $6.9 million in its Chapter 11 filing.

Pulsifer hoped the dealership would emerge from the court's protection, but that hope died last week when he told his final 41 workers that the dealership was broke and sent them home.

Pulsifer blamed the closing on lack of credit. He said an agreement with General Electric Credit Corp. to provide $1 million to buy cars proved too restrictive.

On Jan. 29, Fleet Bank was allowed to foreclose the Jolly John Auto Mall land and building. On March 25, a York County Superior Court judge appointed Boulos Property Management Co. receiver of the property.

Because Jolly John Ford was operating under bankruptcy protection, the handing over of the property to the Portland real estate firm had little effect on operations. But Fleet Bank pushed for eviction so it could sell the property.

John Fitzgerald, the federal government's trustee in the case, said Pulsifer had a reorganization plan, but lacked financing.

Fitzgerald said he will appoint a trustee to sell the assets when the bankruptcy is converted to Chapter 7 (liquidation). He said many of the dealership's 230 creditors won't see their money.

Pulsifer, known across southern Maine for his television commercials, said closing the dealership was "heartbreaking." But, "My wife still loves me. My daughter loves me. It's not a big deal."

— The Associated Press

Saturn begins regional ads on product, price

By Raymond Serafin
CRAIN NEWS SERVICE

As Saturn Corp. opens 40 more dealerships through the end of May, the "different kind of car company" is launching its first regional TV advertising.

The five 30-second spots, which use visual and verbal puns, are breaking this month on spot television in eight cities. More cities will be added as Saturn continues to add new markets.

While national advertising focuses exclusively on image, the regional advertising adds retail elements, such as price, fuel economy and dealership locations.

Typifying the new spots is one in which a Saturn sedan is set in the middle of a field of flowers. With drums beating on a background sound track, a young woman points to the car. Finally, the voice-over says, "Judy Stelzer of Yreka points out why she didn't buy an import." The spot closes with a title card that reads, "The $10,570 Saturn SL2," with room to identify dealers.

"We're trying to reinforce the personality of the company as one that doesn't believe in a lot of hype," said Patrick Sherwood, senior vice president and director of the Saturn account for Hal Riney & Partners in San Francisco.

Sherwood said he believes use of humor communicates that a company has confidence in itself.

"The imports tend not to take themselves as seriously" as the domestic marketers, Sherwood said.

Saturn is targeting buyers who own or who are leaning toward buying import nameplates.

Border block no problem

By William R. Diem
ASSISTANT MANAGING EDITOR

Canadian truckers upset with their government blockaded industrial traffic for several days last week on the Ambassador Bridge between Detroit and Windsor, Ontario, but it did not seem to have as much effect as a similar demonstration a year ago.

Car and truck production in the United States and Canada increased 8.9 percent from the week before, although the total was 14.6 percent behind the same week a year earlier.

Total car and truck output for the week rose 9.2 percent in the United States and 7.3 percent in Canada, compared to the previous week.

Only four plants were scheduled for shutdown this week, and three U.S. and Canadian plants scheduled overtime last Saturday.

Besides the shutdowns (see table below), several production slowdowns were announced. Ford Motor Co.'s Michigan Truck, builder of Bronco and F series, will be on single-shift production through the week of May 20; and Edison, N.J., builder of Ranger, remains on a single shift. Navistar International closed its Springfield, Ohio, plant three days last week due to lack of orders.

General Motors scheduled overtime last Saturday at the Lansing, Mich., (B) plant, maker of Pontiac Grand Am, and at the Moraine, Ohio, postal vehicle line that has been on overtime most of the year. Chrysler scheduled overtime at Windsor, Ontario, and St. Louis (No. 2), which build minivans. Ford scheduled Saturday overtime at St. Thomas, Ontario, for Grand Marquis and Crown Victoria output.

Also on the upbeat side, Chrysler Corp. officials announced that full production will continue indefinitely at Jeep's Toledo, Ohio, plant. In February, the company announced that it planned to lay off 6,0 workers there and cut Jeep production beginning May 13, but since the Persian Gulf war ended, Jeep sales to the Middle East have mushroomed, especially for the Cherokee model.

And General Motors said production of the 1992 Allante started April 22 at Detroit-Hamtramck.

GM's Lansing (A) plant closed last week for a model changeover that the company estimates will cost $90 million. The plant produces the Buick Skylark and the Oldsmobile Cutlass Calais. Production of 1992 models is scheduled to begin in August.

SCHEDULED PLANT CLOSINGS

Plant	Weeks down	Units lost/ week
FORD		
Dearborn, Mich.	**4/29**	
Ford Mustang		3,700
GENERAL MOTORS		
Detroit, Mich.	**4/29**	
Commercial, recreational and specialty chasis		500
Lansing, Mich. (A Plant)	**4/29****	*
Buick Skylark		
Chevrolet Calais

Flexible-fuel Chryslers

John Kopera, 22, a Chrysler engineer, shows the electronic sensor he helped develop that will allow production of flexible-fuel vehicles in two years. Story on Page 43.

Big 3 face yearly loss after $1.9 billion deficit in 1st quarter

By Mary Connelly, Kathy Jackson and Edward Lapham
AUTOMOTIVE NEWS STAFF

The Big 3 automakers may have seen the bottom of the trough, but it will be a long, slow climb to profitability that could see them lose a combined $3 billion this year despite an expected second-half upturn.

General Motors, Ford Motor Co., Chrysler Corp. and the Wall Street analysts who watch them foresee gradual improvement in the dismal U.S. car market this year, and they forecast some profits by the third or fourth quarter.

Detroit trip stirs Congress, Page 42

But the combined first-quarter net loss of $1.9 billion was so bad that analysts scrambled for their computers to reduce 1991 earnings estimates.

The combined net loss was actually less than the operating loss because accounting changes and the sale of a GM building pulled about $500 million from the operating loss of $2.4 billion.

Stephen Girsky, auto analyst with PaineWebber Inc., said his firm doubled the year's loss estimate for Chrysler to $700 million, more than doubled the estimate for Ford to nearly $1 billion and increased GM's

Manhattan store folds, a rare Penske failure

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Roger Penske's closing of his Manhattan dealership has provided a high-profile example of how difficult it is for dealers to survive in high-cost urban markets.

Until he shut the doors of his Cadillac-Buick-Chevrolet showroom last week, the entrepreneur had a record of turning every automotive venture into gold.

"Nobody likes to admit they lost," Penske said Wednesday, his last day of selling cars. "But you try to be a good loser and go on."

Penske said he was done in by high costs and low sales in the gloom-and-doom economy of the Northeast. When he bought the dealership — on the eve of the October 1987 stock market crash — he looked forward to selling 10,000 Buicks, Chevrolets and Cadillacs annually. But sales barely topped 2,000 a year.

"We are one of many who have decided opportunities on the East Coast are limited, especially Manhattan," Penske said.

He said that the Penske Auto Center, which added Buick and

Penske hoped to sell 10,000 Buicks, Cadillacs and Chevrolets annually at the Manhattan store, but sales barely topped 2,000 a year.

EC limit on Japanese includes transplants

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — In a surprisingly tough stance that seems likely to be rejected by Japan, the European Commission late last week set out a Japanese auto-trade strategy that would include transplant production as part of a gradually rising import ceiling through 1998.

The net effect of the strategy, which now must be hammered out between the EC and Japan, would be to largely nullify any advantage for Japanese carmakers of producing in Europe, since they could meet the new ceilings by either importing or transplant production.

The Commission will present its position to the Japanese later this month and hopes to conclude an agreement by July. Japanese agreement is necessary because Europeans sell cars and other goods in Japan and because basic trade law among most nations is already set by the General Agreement on Trade and Tariffs.

"We can't accept this," said Moriharu Shizume, head of the Paris office of the Japan Automobile Manufacturers Association.

"That is not fair. They set up local content rules — 60 percent, 70 percent, then 80 percent. Now that we've got almost 80 percent, they still don't accept it," he said.

Although it has called for export "restraint" by Japanese carmakers, Japan's Ministry of International Trade and Industry is known to oppose both the idea of fixed quotas and the inclusion of transplant production in any ceilings.

"I can't see Japan agreeing to this," said Sanjay Dabysing, automotive group director for DRI Eu-

see EC LIMIT, page 43

Plan highlights

The European Commission plan would:

- End formal quotas on Japanese imports in several countries.
- Raise Japan's total market share in the European Community to about 17 percent by 1998 from about 11 percent now.
- Count transplant production as imports.
- Open the market completely on Jan. 1, 1999.

GM delays output of natural-gas pickups

By Joseph Bohn
TRUCK EDITOR

The General Motors plan to produce 1,000 natural-gas-powered pickups has been delayed until at least late 1991.

Chrysler advances 2-stroke, Page 2

GM last week blamed the delay on an inadequate supply of reliable, quality components.

Output had been scheduled to begin this spring.

Meanwhile, Chrysler Corp. and the Gas Research Institute have launched an $850,000 project to build and test full-sized vans powered by natural gas. The project will determine the technical and commercial feasibility of introducing such vans in the 1994 model year.

Natural gas is considered a cleaner fuel than gasoline, and vehicles powered by natural gas could help meet clean-air requirements in California and the nation later in the decade.

Richard Geiss, Chrysler executive engineer for engine systems, said early models will cost about $4,000 more than their gasoline-engine counterparts.

As Chrysler proceeds, the difference is expected to drop to about $2,000, which is basically the cost of special fuel tanks.

Volvo, Mitsubishi plan venture:
Volvo and Mitsubishi have tentatively agreed to share output from a Volvo plant in the Netherlands. Story on Page 2.

Mitsubishi, Volvo plan Europe venture

By Richard Johnson
and Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTERS

In one more example of the increasing globalization of the world auto industry, Sweden's Volvo Car Corp. and Japan's Mitsubishi Motors Corp. announced Friday that they have tentatively agreed to jointly produce passenger cars at a Dutch government-controlled Volvo plant in the Netherlands.

Mitsubishi already has equity and production agreements with Chrysler Corp. and Korea's Hyundai Motor Corp., and a sales accord with Germany's Daimler-Benz Group. If finalized, the deal also would make Mitsubishi a distant cousin of France's Renault Group, an equity investor in Volvo and a strong opponent of increased Japanese market share in Europe.

"We aimed to be welcome in Europe and have formed a tieup with Volvo from that point of view," said Mitsubishi Chairman Toyoo Tate at a news conference in Tokyo.

Noting that Mitsubishi exports 240,000 cars a year to Europe now, Tate said the Volvo alliance was a "practical decision" that recognized the need to build sales there.

"To reach a larger volume, it is necessary to have a local partner" in Europe, he said.

Under terms of a letter of intent announced jointly in The Hague and Tokyo, the three parties agreed to divide ownership of a restructured Volvo Car BV *equally among them.* The Dutch carmaker is now 70 percent government-owned and 30 percent held by the Swedish company.

In addition, the letter of intent enables the government to sell its remaining shares to Mitsubishi and Volvo equally at a

Chrysler two-stroke linkup forged to hit market first

By Mary Connelly and Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTERS

HIGHLAND PARK, Mich. — Chrysler Corp. plans to announce this week a technological joint venture that will accelerate its plans to produce a two-stroke engine for passenger vehicles to the middle of the 1990s.

Chrysler two-stroke experts, including Francois J. Castaing, vice president for vehicle engineering, have claimed their design will speed to market faster than the Orbital Engine Co. design licensed by competitors such as Ford Motor Co. and General Motors.

Despite the greater mechanical complexity of the Chrysler design, Chrysler engineers believe they will achieve an earlier introduction because their design is more like the familiar four-stroke engine in its backbone architecture. They are working on both three- and six-cylinder versions.

Castaing aims for early debut.

Chrysler made several technical announcements last week on the heels of the visit by more than 40 members of Congress to the Big 3's operations and the announcement of Chrysler's $598 million-dollar loss for the first quarter.

Nissan trims factory pipeline with new dealer delivery plan

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Nissan Motor Co. will unveil a new vehicle delivery system in the United States this month designed to bring a rapid turnaround on factory orders and smaller dealer inventories.

The new program, to be phased in over the next 18 months, will reduce Nissan's current four-month factory-to-dealer lag time to as low as one month, system designers say.

That will allow Nissan's 1,113 U.S. dealers to order and receive cars from its U.S. and Japanese factories as fast as some domestic makers can now respond to orders.

It also will mean greater flexibility in allowing dealers to change their orders days before a scheduled delivery. That will translate into lower inventories at dealerships, lower floorplan costs and potentially higher profits, says Robert Thomas, Nissan Division general manager and vice president of Nissan Motor Corp. in U.S.A.

More important, he says, Nissan's new system will help end the factory's practice of allocating unwanted or undesirable models to dealers, a common practice he blames on poor coordination between dealers and factory.

"We will be able to react to local and regional buying changes much faster under the new system and translate them into product almost immediately," Thomas says.

"Our allocation systems have always been based on looking at historical data rather than current information. That's like driving by looking in the rear-view mirror. If we wait until we have historical data, it's three to six months before the information gets through the factory and back to the dealer. That's potentially a loss of nine months of production time."

The plans come as automakers on both sides of the Pacific are working toward shorter factory lead times in a quest for "real-time production." Toyota Motor Corp.

> "Our allocation systems have always been based on looking at historical data. . . . That's like driving by looking in the rear-view mirror."
>
> **Robert Thomas**

has been working on a similar concept for the past two years. General Motors' Saturn Corp. boasts one of the industry's fastest systems, with only a two-and-a-half-week gap between dealers' factory orders and customer deliveries.

Nissan's system, called the "market-driven allocation on production systems," or MAPS, will link factories, dealers, component manufacturers and transportation companies in the United States, Japan, Canada and Mexico. Dealer orders will be transmitted to the factory three times a month instead of once, and the factories will have increased flexibility to implement requests for last-minute customer changes in paint color, interior trim and powertrain options.

The company believes that faster deliveries will mean more agile responses to changing buyer habits, and also will reduce vehicle inventories throughout the system. Nissan currently considers a 60-day inventory of finished vehicles ideal. Under MAPS, company inventory will shrink to 30 to 45 days, Thomas said. Some vehicles, like the U.S.-made Sentra, could shrink to an eight-to-10-day inventory.

The program has been under development for more than two years and will require a number of changes for the automaker. It will mean altering Nissan's North American vehicle delivery system, securing faster trans-Pacific shipment of its import of cars and parts from Japan, possibly discontinuing its East Coast port activity, and developing a complex radio-transmitter system to track each vehicle through its factory.

Nissan declines to say how much MAPS will cost. Thomas says the changes can be implemented on dealers' existing computers.

The moves should cut the typical four-month lag on shipments from Japan in half and should cut the time on deliveries from Nissan's U.S. factory from about 90 days currently to less than 20 days.

Nissan began introducing the program last month to some dealers. Its first phase is limited to giving dealers more input into the existing allocation system and will initially focus on color selection.

The current system "is not very competitive right now," Thomas says. "Our dealers don't even think in terms of getting a car from the factory. They think of getting it from the port — and only if they know it's there.

"The first phase," he adds, "will still deal with the cars that are sitting at the port, but it will give dealers more control over what they get."

MAPS is initially aimed at the U.S. market, where Big 3 systems hold an advantage over Japanese importers and their transplants, which still depend heavily on imported parts that take months to arrive from Japan.

GM dealers can generally expect a factory to turn around an order in six to eight weeks. Nissan dealers could wait four months for a special-order car from Japan.

The program also has calculated methods of halving the time required to move cars and parts across the Pacific from Japan.

Most U.S. Nissans will be U.S. built by '94

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

By 1994, Nissan Motor Corp. plans to build in U.S. plants between 50 and 65 percent of all the cars and trucks it sells here.

Production plans for the 1994 fiscal year call for building up to 473,000 cars and light pickups at its manufacturing plant in Smyrna, Tenn., and obtaining about 50,000 minivans from a venture with Ford Motor Co. in Avon Lake, Ohio.

Nissan's U.S. sales arm forecasts sales of between 750,000 and 800,000 cars and trucks by the mid-1990s. Last year, the company sold 591,145 units.

"Smyrna will be a very big part of our business," said Robert Thomas, Nissan Division general manager and vice president of Nissan Motor Corp. in U.S.A.

"Depending on our volume, it could provide between 50 and 65 percent of all of our sales," he said. "If you throw Avon Lake into the equation, you could easily get up to 65 percent of our total volume."

Nissan obtained only 20 percent of its U.S. sales from the Smyrna plant in 1988. This year, it will build about 40 percent of the vehicles it sells in the United States.

According to a planning schedule obtained by *Automotive News*, Smyrna is scheduled to build 264,500 vehicles in Nissan's current fiscal year, which ends on March 31, 1992. That volume will be split between 132,600 Sentras and 131,900 small pickups, according to internal projections.

Last year, the plant received environmental regulators' approval to expand output by about 20,000 units a year in anticipation of increased demand for the newly redesigned Sentra.

In fiscal 1992, the plant will begin producing a new model, expected to be a replacement for the Stanza sedan, code-named IV. The company plans to build 90,000 units through March 31, 1993, the schedule says. Total Smyrna production is scheduled to be 372,000 units for the year.

The Smyrna factory is designed to shift capacity as needed among the Sentra, pickup and IV.

In fiscal year 1994, IV production is scheduled to hit 200,000 units, boosting Smyrna output to as many as 473,000 vehicles, the internal projections indicate.

Ford's Avon Lake plant is scheduled to build 120,000 minivans during Nissan's fiscal 1993 and 135,000 in 1994. Ford is expected to receive 85,000 of those units annually and Nissan is scheduled to take 50,000.

NISSAN PLANNING VOLUMES

Table shows preliminary planning volumes for Nissan's plant at Smyrna, Tenn., and Ford's plant at Avon Lake, Ohio.

	12 months ending March 31		
Vehicle	1992	1993	1994
Sentra	132,600	152,000-172,000	152,000-172,000
Pickups	131,900	110,000-130,000	110,000-130,000
New Stanza	0	90,000	160,000-199,500
SMYRNA TOTAL	264,000	372,000	453,000-473,000

Parts operation seminars a casualty of Ford cost cutting

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Services to dealers are among the items being squeezed as Ford Motor Co. strives to cut salaried costs 10 percent by the end of the year.

In an announcement to its Ford and Lincoln-Mercury dealers last month, Ford said its Parts Managers' Operations Seminars would be suspended this year due to "the severe downturn in the automotive sector of the economy."

Dick Hosteller, parts director for Jordan Motors Inc. (Ford-Lincoln-Mercury-Toyota-Volvo-Nissan) in Mishawaka, Ind., said the cancellation of the seminars may not hurt veteran parts managers but are crucial to the neophytes. "Parts managers can make or break a dealership," Hosteller said.

Instruction at the one-day seminars includes how to timely order parts, various factory discounts and basic accounting.

Hosteller said the parts division of a dealership can account for 10 to 70 percent of a dealer's profits. He said a knowledgeable parts manager is a must.

"He is the one that has to delegate his time and knowledge to take care of the dealer's inventory investment," Hosteller said.

Among the common mistakes made by uninformed parts managers, Hosteller said, are ordering too many or obsolete parts; paying too much; ordering late and causing a delay in needed parts; or not knowing how to claim for shortages or damaged parts.

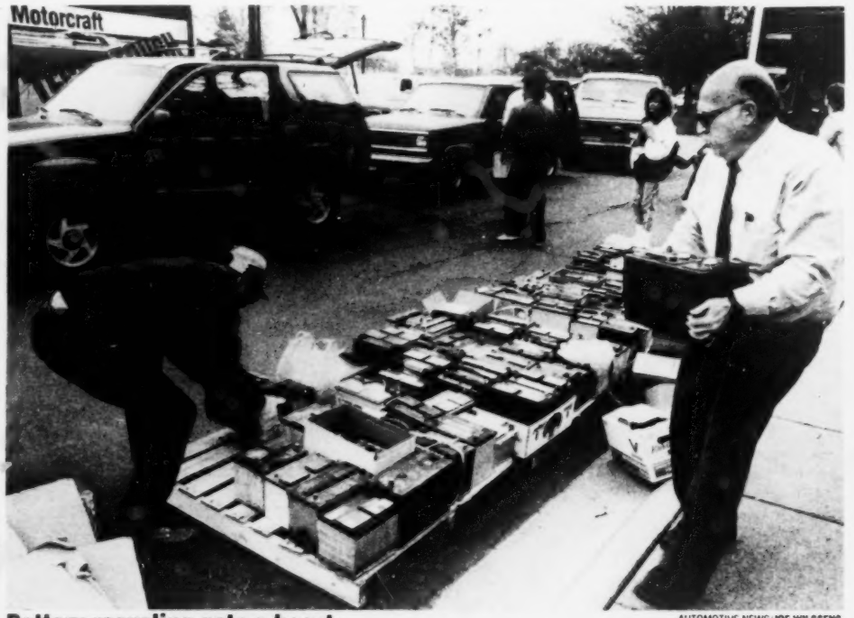
> "Parts managers can make or break a dealership."
>
> **Dick Hosteller**
> Jordan Motors Inc.

Hosteller said if a parts manager does not know how to properly order parts, "he can literally stifle a dealer's cash flow."

The seminars train about 500 parts managers annually, said Ford spokesman Mike Moran. He said the program is about five years old.

He said the seminars are being bumped this year due to costs and because of some significant policy changes in parts ordering that will occur this year. Moran said the company hopes to reinstitute the seminars next year.

Moran would not say how much money Ford spends on the program; Hosteller said a conservative estimate would be about $200 a person.



AUTOMOTIVE NEWS/JOE WILSSENS

Battery recycling gets a boost

To commemorate Earth Day 1991, Ford Motor Co.'s Parts and Service Division sponsored the collection of used car batteries in 26 cities around the country. Spokesman Mike Moran said Motorcraft Service Battery distributors took in about 1,500 batteries during the day-long event April 19, with donors receiving discount coupons for new batteries. About 90 percent of the collected batteries are recyclable.

Maserati improves system to get parts for dealers

By Dale Jewett
SERVICE EDITOR

Because it isn't selling many cars these days — an estimated 20 a month for the first quarter of this year — Maserati is placing more emphasis on parts.

Maserati Automobiles Inc., the Baltimore-based importer for North America, is touting the opening of a new parts operation at company headquarters in Modena, Italy.

Garbutt: Shamal due next year

The 40,000-square-foot facility has cut the turnaround time for parts ordered from the United States from weeks to several days in some cases, said George Garbutt, Maserati Automobiles executive vice president.

The operation, which opened last November, replaced the parts setup in the Maserati factory.

"It was in an antiquated wing of the factory, even down to the wooden bins," Garbutt said. "Anybody could send orders for parts, but getting them packed and shipped was taking a lot of time."

All parts orders for North America now go through the Baltimore office. Maserati Automobiles has a parts inventory of about $3 million, mostly "fast-moving" routine service parts such as hoses and gaskets, Garbutt said. But it also stocks parts for Maserati cars as old as 1950s models.

There are 38 full-service Maserati dealerships in North America, of which only two are stand-alone outlets, Garbutt said. The importer also has appointed 13 service centers in areas where there are no Maserati dealers.

With Maserati sales at a mere trickle, Garbutt acknowledges that parts sales are becoming for important for the company's dealers.

Maserati's U.S. sales peaked in 1984 at 2,023 units, but plunged to 733 in 1988 and totaled only 240 last year, according to *Automotive News* estimates. The current model lineup includes the two-seat Spyder convertible, the 430 four-door sedan and the 228 coupe.

"Sales are slow because of the reputation of the early Biturbos," Garbutt said. "The vehicles we're selling now are a thousand times better.

"As our sales diminish, parts are becoming more important to the dealers," he said.

Maserati has also been trying to shift from the $30,000 to $50,000 price bracket to the luxury exotic sports-car niche, a move that will be spearheaded by the new Shamal sport coupe.

But deliveries of the Shamal to the United States won't begin until early next year, Garbutt said. The Shamal will replace the 228 and sell for an estimated $85,000.

SERVICE BRIEFS

Chrysler adds parts office

HIGHLAND PARK, Mich. — Chrysler Corp. will open a new parts distribution facility in Atlanta early next year and has purchased a 25,000-square-foot warehouse and office building to house the operation. Terms of the purchase were not disclosed.

The center will serve about 450 dealers in eight states that are currently served by other distribution centers, said Steven A. Torok, general manager of Mopar Parts, Chrysler Service and Parts Operations. It will be Chrysler's 19th parts distribution center in the United States.

The center will stock about 75,000 parts and will be equipped with wire-guided stackers, an automatic storage and retrieval system, wire-guided vehicles and personal-computer-driven carousels for fast-moving parts. Most workers for the warehouse will be transferred from other parts distribution centers.

Hyundai taps Key dealers

FOUNTAIN VALLEY, Calif. — Hyundai Motor America has named nine of its 431 dealerships to its Key Dealer program.

The company said the program is intended to increase communication between the dealer and the company's technical personnel to find production, durability and reliability concerns.

Incentives include participation in quarterly product quality meetings; a meeting at the Bromont, Quebec, assembly plant at the start of the model year, and awards for performance.

The dealerships, and areas of focus, are: Fairfax Hyundai in Fairfax, Va., heavy traffic; Carlisle Hyundai in Pinellas, Fla., hot/humid temperature/dry; Cormier Hyundai in Long Beach, Calif., dry temperature/heavy traffic; Lou Grubb Hyundai in Glendale, Ariz., hot/dry; South Center Hyundai in Tukwila, Wash., temperate/wet; Liberty Hyundai in Colorado Springs, Colo., cold/dry/high altitude; Grand Hyundai in Elmhurst, Ill., cold/wet; Mills Hyundai in Madison, Wis., cold; North Park Hyundai in North Park, Texas, hot/humid/open roads.

Students test skills

LEESBURG, Va. — More than 80 vocational students in automotive service programs will be in Louisville, Ky., June 27 for the Vocational Industrial Clubs of America United States Skill Olympics.

The students will compete in a timed automotive service technology contest. The three top high school and post-secondary finishers in each of 54 competitions will receive medallions. Many will receive tools, textbooks, scholarships or special training programs donated by contest sponsors.

Dana program turns 50

TOLEDO, Ohio — Dana Corp. is celebrating the 50th anniversary of its Doctor of Motors program, which trains technicians to work on chassis, engine and hydraulic systems.

The program was introduced in 1941 by Perfect Circle Piston Rings. Participants work with service manuals and videotapes. After completing each segment they must take a written test on the system covered.

Appraisers offer guide

DALLAS — The Independent Automotive Damage Appraisers Association is offering its 1991 Service Directory.

The free booklet lists more than 250 association-affiliated service locations, including key people, service area and types of appraisals. For a copy call (800) 369-4232.

Service business rises in March

Buoyed by an increase in sales of parts and accessories, parts and service business at new-car dealerships in March rose from the same month last year.

Shop business for the month was 107 percent of the amount reported in March 1990, as measured by the Automotive News Service Index. Last year's figure was 106.2 percent of that in March 1989.

For the first quarter of this year, parts and service business was 102 percent of that tallied for the January-March period in 1990.

Parts and accessories was the only one of five indicators to show an increase in the month-to-month comparison.

Of the respondents who reported a rise in service volume, some attributed the gain to increased advertising and promotion.

But several respondents cited the economic recession as a continuing cause of a decline in business.

SERVICE INDEX
107*

	Mar., '91 vs. Mar., '90	Jan.-Mar., '91 vs. Jan.-Mar., '90
Gross Profit on All Labor and P&A Sales	– 3.9%	+ 0.5%
Repair Orders Written	– 4.0%	+ 0.7%
Total Labor Sales (Customer & Warranty)	– 1.7%	+ 2.4%
Shop Parts Sales (Customer & Warranty)	– 3.8%	+ 3.3%
Sales of All P&A	+18.6%	+ 2.6%

* Survey by Automotive News shows that dealers' service and parts business in March 1991 was 107 percent of business in March 1990. Service business in the first three months of 1991 was 102 percent of business in the corresponding period in 1990.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealers.

Mich. trip stirs Congress to action

Delegation seeks White House help for ailing auto industry

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — President Bush said no when the bosses of the Big 3 asked in March for trade restraints against the Japanese, but now 40 Congressmen and women are knocking at his door seeking help for Detroit.

Admitting that their request is as unusual as their two-day trip to Detroit a week earlier, the 40-member Congressional delegation has asked for a meeting with Bush. They want to talk about ways to help the Big 3.

Some representatives have already promised help in Congress, and there are signs that the administration may loosen some regulations that bother the auto industry.

Last week, several of the House of Representatives members who went to Detroit on April 25-26 made eloquent speeches on the House floor and promised regulatory or legislative assistance.

Rep. Peter Kostmayer, D-Pa., told the House it was time for a new sensitivity toward the auto industry. "It's time we find ways of helping them while making sure that America's automobiles are the cleanest, the safest, and the most efficient in the world."

Rep. Marcy Kaptur, D-Ohio, trip organizer, said she would advocate stricter enforcement of tax laws and trade laws "to encourage sales and purchase of parts by transplants and nations like Japan."

Rep. John Dingell, D-Mich., is expected to question Trade Rep. Carla Hills on allegations of dumping — the deliberate underpricing of vehicles by the Japanese auto industry — when she appears later this month before one of the subcommittees he chairs.

> "It's time we find ways of helping them while making sure that America's automobiles are the cleanest, the safest and the most efficient in the world."
>
> **Rep. Peter Kostmayer**
> Democrat, Pa.

Other responses to the Detroit visit included a fiery speech accusing Japan of trying to bankrupt U.S. industry from Rep. Helen Bentley, R-Md., and a careful statement from Rep. Norman Lent, R-N.Y., that Congress now understands the debate on the corporate average fuel economy better and is "more aware you can't simply wave a magic wand like the Bryan bill and not have repercussions adverse to the automobile industry."

In the May 2 letter to Bush, delegation members said the industry's quality is improved but first quarter losses (of $1.9 billion) show a dangerous trend. "Washington can't solve Detroit's problems — and Detroit isn't asking us to — but we can be a more effective partner in addressing the challenges it is facing," said the letter.

"We would also like to discuss ways in which both ends of Pennsylvania Avenue can work together to help this industry get moving again by strengthening its position in the global economy."

The Bush administration rebuffed a request by the Big 3 in March to cut 1991 Japanese vehicle imports by 500,000 units. But the administration did not reject the industry's cry for relief from regulation. Signals came from Bush and top cabinet members last week that the industry may indeed get relief from regulations and the new Clean Air Act.

In a speech before financial writers, Bush said he is troubled by the growing thickness of the Federal Register, where new regulations are published daily.

"Some of these regulations are needed and some are not, and we want to free our people of unnecessary regulation," Bush said.

The Council of Competitiveness, headed by Vice President Dan Quayle, "will look carefully at everything" including new clean air regulations to see if their benefits outweigh their burdens on the economy, Bush said.

Edsel Ford II: "Dealers know that if they ask a question, I'll get them the answer."

AUTOMOTIVE NEWS/JOE WILSSENS

Edsel Ford settles into new job

'I will work well with dealers,' Ford Credit president says

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

SOUTHFIELD, Mich. — He says his new office is smaller than the one he had at company headquarters in Dearborn, Mich., but it has a view — overlooking a parking lot and a busy freeway 20 miles north of downtown Detroit — that Edsel Ford II jokingly says he likes.

"I love cars so the view is great," says Ford, 42, new president of Ford Motor Credit Co. He assumed his new post May 1.

He will manage a staff of 10,000 and a Ford subsidiary that earned $237 million in the first quarter of this year, the best performer in the company's stable at the moment.

Ford, who has worked in a variety of positions since he joined the company in 1974, admits that he has no financial expertise. He said he brings "great human resource skills" and a knowledge of the dealers to the subsidiary.

"I will work well with the dealers," Ford said. "They've come to understand that if they ask a question, I'll get them the answer."

For the first quarter, Ford Motor Credit provided floorplanning for 73 percent of Ford Motor Co.'s wholesale factory sales of cars and trucks to dealers and 32 percent of the retail sales to consumers, up from 29 percent a year ago.

The earnings were up 105 percent from the year-ago period and represented 87 percent of the $271 million Ford's Financial Services Group earned.

William Odom, chairman of Ford Credit, attributed part of the strong first-quarter earnings to $1.5 billion in sales of securitized retail car loans.

He also said Ford Credit's cost to borrow money was 8.4 percent, compared to 8.9 percent last year. "The financial services businesses typically are counter-cyclical" to the auto industry, Odom said. He explained that generally during a recession, interest rates come down for finance institutions, making their margins greater. He said that during boom times, Ford Credit's margins usually are slimmer.

Odom says his goal is to shorten the length of car loans to a maximum 54 months. He says a five-year loan, which the company offers now, is too long.

"Everything we do is designed to bring that customer back to that dealer to buy another Ford or Lincoln-Mercury product," as soon as possible, Odom said.

EARNINGS

FROM PAGE 1

estimated loss by about one-third to $1.5 billion.

To weather the downturn, the Big 3 will continue to rely on sales of program cars to rental fleets and on their respective cost-cutting programs. They will also stick with retail and wholesale incentives that averaged nearly $1,000 per unit in the first quarter, down slightly from last year.

Scott Merlis, securities analyst with the New York brokerage firm Morgan Stanley, says incentives must be increased to more than $1,000 a car to attract buyers.

He said increased production during the second quarter, along with lower inventories, should move the makers into "pink ink instead of red," but he is not looking for measurable improvement until the fourth quarter.

"We just may move from a depression to a recession," he said.

General Motors

The world's largest automaker suffered a dismal first quarter as carmaking operations in North America took a gigantic hit. The blow was softened by profits from overseas operations, non-automotive subsidiaries and the sale of the GM Building in New York City.

GM reported a net loss of $376.5 million, compared to net earnings of $710 million last year. The operating loss was $1.16 billion, but a change in accounting methods and the sale of the New York building reduced the net loss.

Chairman Robert C. Stempel said GM's North American automotive operations were ravaged by lower factory sales, a product mix that moved to lower-priced models and selling expenses that were higher than last year, although less than in the fourth quarter of 1990.

GM's overseas operations improved. Overseas retail sales in the quarter were up 2.9 percent, to 646,000 cars and trucks, buoyed by Europe where retail sales rose 8.6 percent to 473,000 units.

Still, worldwide factory sales to GM dealers totaled 1.65 million units, off 8.8 percent from the weak first three months of 1990.

General Motors Acceptance Corp. reported net income of $306 million, off just $30 million from last year. Electronic Data Systems Corp. earned $122 million, up from $110 million. GM Hughes Electronics Corp. earned of $114 million, down from $183 million.

Ford

Incentive programs and regulatory mandates will continue to plague Ford Motor Co., giving the company little hope that it will turn a profit in the second quarter, said David McCammon, vice president of finance and treasurer.

Ford lost $884 million in the first quarter, compared to net earnings of $506 million last year. The loss was larger than generally expected. Total sales were $21.3 billion, down $2.3 billion.

McCammon said he believes the first quarter will be the low point of the year.

He said Ford's incentives averaged $900 per unit in the first quarter compared to $950 in the fourth quarter last year and $1,000 in the first quarter last year.

McCammon said it's unlikely that Ford will report a profit in either the second quarter or for the entire year because the company "is not expecting a major increase in retail sales."

Automotive operations on both sides of the Atlantic Ocean accounted for most of the dismal first-quarter performance.

Worldwide, Ford's factory sales totaled 1.2 million cars and trucks, down 14 percent from last year, and automotive operations lost $1.2 billion. Last year, automotive operations earned $315 million.

U.S. automotive operations lost $947 million; overseas automotive operations lost $208 million.

The company's Financial Services Group subsidiary was the only unit to turn a profit. It rose 42 percent, to $271 million.

Chrysler

Chrysler Corp. reported a first-quarter net loss of $598 million, including a $341 million loss from operations.

Chrysler took a one-time $257 million charge for a change in sales incentive accounting. The net loss of $598 million compares with earnings of $71 million a year ago.

Chairman Lee Iacocca called the period "abysmal" and said the company's assembly plants operated at less than 50 percent capacity. The company held out little hope that it would return to profitability in the second quarter, although losses are expected to be less severe.

Jerome B. York, Chrysler executive vice president and chief financial officer, said Chrysler envisions "a very slow recovery" in U.S. vehicle sales this year.

Chrysler is forecasting that U.S. light-vehicle sales will climb, on a seasonally adjusted annual rate, from 12.1 million in the first quarter. The fourth quarter "could be in around 14.0 to 14.2 million with a little luck," York said. Sales were 13.9 million light vehicles in 1990 and 14.6 million in 1989.

Chrysler's retail sales in the first three months of 1991 were the lowest since the first quarter of 1983. North American unit sales tumbled 19 percent to 408,468, down from 505,646 a year ago.

At the same time, sales incentives averaged $1,100 per vehicle in the quarter and could climb to $1,200 per unit in the second quarter, a company official said.

Low-margin fleet sales accounted for about one-third of the sales volume in the first quarter, and revenue dropped 24 percent to $5.80 billion.

Chrysler's first-quarter results also included a $199 million after-tax charge to cover salaried workforce reductions and a $242 million after-tax credit because it will spend less than anticipated to reduce manufacturing capacity.

The $257 million charge for sales incentive accounting reflects Chrysler's decision to book incentive charges at the time vehicles are wholesaled to dealers rather than when units are retailed.

Chrysler Financial Corp. earned $77 million in the quarter, but that was down from the record $89 million posted in the 11990 period.

Chevrolet flip-flops, keeps buyer rebates on '90 models

INCENTIVE WATCH
CUSTOMER INCENTIVES
NEW PROGRAM

GENERAL MOTORS
Finance rates in lieu of rebates start at 4.9 percent for Buick, 5.9 percent for Chevrolet and 7.9 percent for GMC Truck. Rebates expire June 2 on 1990 models, July 7 on 1991 models.

Buick Regal (1990)	$250-1,000*
Reatta (1990)	$2,000
Chevrolet Prizm, Corsica (1990)	$500
Beretta (1990)	$1,000
Lumina (1990)	$1,500
G-van (1990)	$1,000
C/K pickup (1990)	$1,250
Blazer, Suburban, Lumina APV (1990)	$1,500
Tracker, R/V pickup (1991)	$500
Lumina APV, S pickup	$1,000
S Blazer (1991)	$1,500**
GMC (1990) G-van	$1,000-1,500
Sierra	$1,250
Jimmy, Suburban	$1,500

*Based on option package selected.
**Rebate on 1991 S Blazer is $1,000 after June 2.

SUBARU (1991, expires July 2)

Loyale	$500
Legacy L	$750
Legacy L Plus	$900-2,000
Legacy LS	$1,200-$1,400
Legacy LSi	$1,200-1,700
Legacy Spt. Sed.	$1,00
XT, XT6	$2,000

CONTINUING PROGRAMS

CHRYSLER CORP.
Rebates expire June 30 unless otherwise noted. Finance rates in lieu of rebates are 4.9 percent to 9.9 percent, depending on length of contract. Finance rates on minivans are 7.9 to 10.9 percent.

Chrysler (1991)*	$1,000-1,500
1990	$500-1,000
Dodge Monaco (1991)*	$1,500
Other 1991 cars*	$400-1,000
Monaco (1990)*	$1,500
Other 1990 cars	$700-1,000
Dodge trucks (1991)	$300-1,500

Scoupe (1991)	$750

TOYOTA (1991, expires Oct. 1)

Celica GT, 4Runner	$800 discount on options

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

As some manufacturers dumped consumer and dealer incentives on 1990 models and shifted their attention and cash to the 1991s, others sweetened or extended buyer rebates on some 1990 units.

The latter group included Chevrolet, which previously told its dealers that it would drop incentives on 1990 when the then-current program expired May 5.

Nissan Motor Corp. in U.S.A.'s dealer incentive program and Subaru of America's customer incentive program do not include any 1990 vehicles.

"We're in pretty good shape as far as 1990 inventory is concerned," said Richard Marshall, a Subaru spokesman. "We're putting emphasis on '91s to make way for the '92s."

Contrary to its earlier announcement, Chevrolet placed incentives on several 1990 cars and trucks.

A Chevrolet dealer, who did not want to be named, said he believes the about-face by Chevrolet is the direct result of heavy financial losses by General Motors and the National Automobile Dealers Association's call for manufacturers to offer more consumer rebates.

GM's first-quarter loss may have played a part because dealers must clear out their 1990 models before they will order 1991s.

Chevrolet placed rebates of $500 to $1,500 on 1990 Geo Prizm, Corsica, Beretta and Lumina and $1,000 to $1,500 on several trucks.

Chevrolet also enhanced customer rebates on some 1991 trucks. The payment on the Lumina APV was increased from $500 to $1,000. The program ends July 7.

Said David Hudgens, Chevrolet spokesman: "We've put the money where we think we need it."

Buick discontinued consumer rebates on all 1990 models except Regal and Reatta, which bring $250 to $2,000 through June 2. Alternate financing is also available.

Oldsmobile, which regionalized its retail incentive program in April, has extended it through June 2.

GMC Truck's new program for 1990 models pays buyers of Sierra, G-van and Suburban $500 more than the previous program. The incentives on those models now range from $1,000 to $1,500 through June 2. In lieu of rebates customers many choose special finance rates of 7.9 percent for 24, 36 or 48 months and 10.9 percent for 60 months.

Nissan's program is directed at dealers and pays $400 to $1,500 on cars and $1,000 to $1,500 on trucks. On several models, dealers earn a flat payment plus $200 to $400 per sale if they reach 100 percent of their quota.

For example, dealers who reach their sales objective on the Maxima earn $800 plus an extra $200 per car retroactive to the first car sold.

While 1990 Nissan vehicles are not eligible for payments, they do count toward meeting the quota. Nissan's program expires Aug. 2.

Subaru, in addition to dropping incentives on 1990 models, discontinued its dealer rebates and is concentrating on retail payments.

Subaru is offering buyers $500 to $2,000 on 1991 XT, XT6, Loyale and Legacy cars through July 2.

Ford Motor Co.'s first-time buyers program on 1990 and 1991 models has been amended to reduce the cash incentive and increase financing possibilities.

The cash allowance as of May 1 is $400 instead of $500, except for the Ford Probe, which remains at $1,000. Unlike the previous program, consumers can seek and use finance institutions other than Ford Motor Credit Co. if Ford Credit does not match a deal approved by another agency.

Cars	$500-1,500

PENSKE

FROM PAGE 1

Chevrolet after the original deal, had only one or two profitable months in three years. "That can only go on so long," he said.

Penske hasn't had much practice at losing. The expensive New York failure — General Motors and Penske together put up $9 million just to renovate the facility — is a rare setback for the former racing great.

But at least Penske can retreat to his other businesses, including Detroit Diesel Corp., Leaseway Transportation, his racing team and other dealerships. The dealerships include Longo Toyota in El Monte, Calif., the nation's No. 1 Toyota retailer.

But GM can't walk away from Manhattan, and Penske's departure leaves the automaker without a Cadillac, Buick or Chevrolet-Geo franchise in the borough.

"There are certain locations in the country that are important to have," and Manhattan is one of them, said GM spokesman Harold Jackson. He said GM is looking for another dealer to move into the same location.

Under the deal in which Penske took over the Cadillac franchise from Victor Potamkin in 1987, GM agreed to lease property from Potamkin for 25 years. The property, which was across the street from the Potamkin Cadillac dealership, was then sublet to Penske on a per-car-sold basis.

GM has kept a presence in nearby Long Island City in Queens by building a Cadillac-Pontiac-Chevrolet complex that is leased to three dealers. No dealer in the area was willing or able to put up the money on his own.

Eli Bloom, president of Bloom Pontiac, one of the three GM stores, said manufacturers will have to resort to that kind of arrangement more and more often if they want to have "shelf space" in expensive markets like New York City.

Bloom said that before the recession began late last year, many urban dealers were receiving hard-to-refuse offers to sell their real estate for non-automotive development. The recession interrupted that trend, but when the economy starts to recover, dealers may be "more willing to listen," he said.

Ford Motor Co. subsidizes its Manhattan outlet. Mercedes-Benz of North America Inc. also has a factory store in Manhattan and another in Hollywood, Calif.

> The best thing to do is close it down, clean it up and get out.
>
> **Roger Penske**

BMW of North America Inc. recently decided to open a factory store in upscale Westchester County, N.Y., rather than go without a dealer in such a strong luxury-import market. BMW has another factory store in the San Francisco market.

But if a heavyweight like Penske, at the head of a $2 billion corporation, can't make a go of it in New York, then one has to wonder who can.

One candidate, ironically, is the 80-year-old Potamkin, one of the nation's original megadealers, who gave up the Cadillac franchise to Penske and still owns the property.

Penske's dealership operated literally in the shadow of a five-story POTAMKIN sign across the street on 11th Avenue, where Potamkin has his Auto Center Leasing store.

Potamkin said last week that he is interested in moving back into the facility, which was once the top-volume Cadillac outlet in the country and was selling about 400 Cadillacs a month when Penske took over.

"I don't have any mortgages, and that's an advantage," Potamkin said.

Penske officials tried hard not to criticize Potamkin when Penske took over the store, but there was talk about how Penske's polished organization knew how to treat upscale Cadillac customers, and maybe a high-volume, high-pressure, low-price dealer like Potamkin didn't.

But Potamkin may have the last laugh in what could be a victory of sorts for the School of Hard Knocks vs. the Ivy League.

Potamkin said he was "shocked" that Penske moved out without waiting for a new owner to move in.

"Some people can function in New York, and some can't, just like some people could function in Tuscaloosa, Ala., and others couldn't," Potamkin said last week.

"People have one or two good years, and they go out and build monuments (for dealerships). They overspend, and they overbuild. They have one bad year, and they're in trouble," Potamkin said.

"I'd rather cool it, and if I get a little ahead, maybe I go a little stronger on advertising. But I don't spend an extra 5 or 10 million bucks and build a beautiful fancy building. If the factory wants to do that, let *them* do it."

But Potamkin has a huge advantage in owning the property. And, like Penske, Potamkin has a multi-billion-dollar corporation backing him up that is capable of supporting an unprofitable dealership.

Penske sounded fed up with the Manhattan experience. In addition to the poor economy, Penske ran into a nightmare of red tape and the difficult trade unions for which New York City is notorious.

For instance, Penske complained that it took two years to get official permission to move into the renovated facility.

Walter Czarnecki, Penske Corp. executive vice president, said that until the dealership could move, Penske had to operate out of Potamkin's old showroom, which was next to Potamkin's Mitsubishi showroom. Penske finally was able to move across the street, only to find that the plumbing had to be ripped out of the renovated building.

"The best thing for us to do is close it down and clean it up and get out, and leave it where somebody else can move in and pick it up," Penske said.

ALLIANCE

FROM PAGE 2

later stage. A new production line would be installed at the Born plant, increasing capacity from about 120,000 units to 200,000, with Mitsubishi and Volvo splitting the output.

No timetable is specified in the letter of intent, but production of a new Volvo-Mitsubishi model is expected to start in about 1995 as Volvo Car BV's 400 subcompact series, now produced at Born, is being phased out.

The restructured Volvo Car BV will build a jointly developed model in the lower-medium range using common components, but with separate body styles. Volvo Car officials in Sweden said it is too early to describe the percentage of components coming from each company.

In Tokyo, Tate said it was "too early to say" whether Renault, which now supplies engines to Volvo, would have a supplier's role in the new car.

The letter of intent calls for the government, Mitsubishi and Volvo to contribute jointly to plant and product investments. No figures were disclosed, but speculation has centered on a combined investment of $1.3 billion.

The parties said they expect to conclude an agreement within the next few months.

Volvo Car BV produced just over 121,300 cars last year, down from 134,600 in 1989. Production last year consisted mostly of the 400 series. Output of the 300 series lower-medium model ended last March.

Volvo and Mitsubishi have been negotiating for more than a year on a joint car production agreement in the Netherlands.

Volvo officials said last week that Renault does not oppose the link with Mitsubishi. When the two companies swapped stakes last year to form a strategic alliance, they gave each other authority to veto agreements made with third parties.

"Renault understands our motives and accepts our agreement with Mitsubishi," said a Volvo spokesman. Renault would take part in development of a new car, he said.

ZR-1

FROM PAGE 3

prices. The feeling is that smaller dealers, perhaps allocated one or two cars, do not have the customer base or specialized service capability to support a ZR-1 supply.

"Some dealers who really aren't in the Corvette business are getting these cars," said Gary Konner of Malcolm Konner Chevrolet in Paramus, N.J.

"We have a separate showroom for the cars and five technicians who work on nothing but Corvettes," Konner said. "Perhaps only Chevy's top 200 Corvette producers should get the cars, or the division could tighten the standards for being a ZR-1 dealer. Otherwise, you're going to get small guys in a panic after 30 days that run a distress ad and blow the car out at invoice."

Konner said he has taken his full allocation of ZR-1 models and has even purchased some from other Chevrolet dealers.

Like Perkins, others recognized that the buying frenzy for ZR-1 models might be a short-term phenomenon. Rick Cole, president of Rick Cole Auctions in North Hollywood, Calif., told *Automotive News* in September 1989 that the ZR-1 (particularly those without low serial numbers) probably wouldn't make collectible status.

"It's just another piece of Detroit iron," he said. "I don't see a major rise in the value of the ZR-1."

Adding to dealer problems was a three-month hold put on sales of the ZR-1 from early December to mid-March. The hold was prompted by seven initially unexplainable engine seizures in the shipping yard of the Bowling Green, Ky., assembly plant.

At the start of the hold period, Chevrolet advised dealers not to take potential customers for demonstration rides. A missive from the division warned of the chance of some undisclosed problem.

Many dealers insist that the situation added frost to spring sales of the ZR-1.

Car output is highest in 2 months

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Last week's car production schedule in the United States was the highest since the week ended ended Feb. 23, and the Canadian estimate was highest since the week ended March 23.

Scheduled Saturday overtime last week at three U.S. and one Canadian car assembly plants helped boost the week's output.

U.S. car production was scheduled at 118,336 units, 4.81 percent above the prior week but 11.20 percent below the year-ago week.

So far this year, car assembly in the United States is 11.32 percent behind 1990.

General Motors slated Saturday overtime last week at the Lansing, Mich. (B); Linden, N.J., and Arlington, Texas, car plants.

Arlington will remain on Saturday overtime. The plant produces the Buick Roadmaster, Chevrolet Caprice and Cadillac Brougham.

GM's Saturn assembly plant in Spring Hill, Tenn., began operating a second shift last Monday, boosting production to about 700 units per day. The plant now works a two-shift, four-day week.

GM has announced that its Lordstown, Ohio, assembly plant will be the sole producer of second-generation J-cars, the Chevrolet Cavalier and Pontiac Sunbird. The cars will be 1994 models.

Car production in Canada was slated at 26,485 units last week, 19.21 percent above the previous week and 3.06 percent above the year-ago week. Year-to-date car production in Canada is 10.07 percent above 1990.

Ford Motor Co. scheduled Saturday overtime at the Oakville, Ontario, car plant last week.

U.S. truckmakers reached the one-million mark last Monday, one month behind 1990.

Chrysler Corp., built its first Grand Wagoneers of the year in the week ended April 27. Sixty-five were built at the Toledo, Ohio, plant that week.

Canadian truckmakers also scheduled their strongest week since March 23. Last week's output of 20,206 was 14.58 percent above the previous week.

GM scheduled Saturday overtime at its Scarborough, Ontario, truck plant last week.

Ford shuffles car, service division chiefs

Roberts

Wagner

Miskowski

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has shuffled the general managers of its two North American car divisions and its parts and service operations.

The switch, effective immediately, was announced late last Friday after the three men were informed earlier in the day. It creates fresh challenges for top Ford marketing executives as the company tries to regain the strong market-share momentum it had in the 1980s until last year.

Moving are:

- Thomas Wagner, 52, vice president and general manager of Ford Division for the last three years; he becomes vice president and general manager of the Ford Parts and Service Division.
- Ross Roberts, vice president and general manager of Lincoln-Mercury Division for three years; he succeeds Wagner at Ford Division.
- Lee Miskowski, vice president of the Parts and Service Division, who succeeds Roberts at Lincoln-Mercury.

Wagner and Roberts led the vehicle divisions at the peak of Ford's market-share rise of the 1980s. But the corporation lost 0.7 points of car and light-truck market share in 1990, to 23.9 percent, and the loss has accelerated in 1991.

At least the previous three general

AIADA's Mr. Olin goes to Washington

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

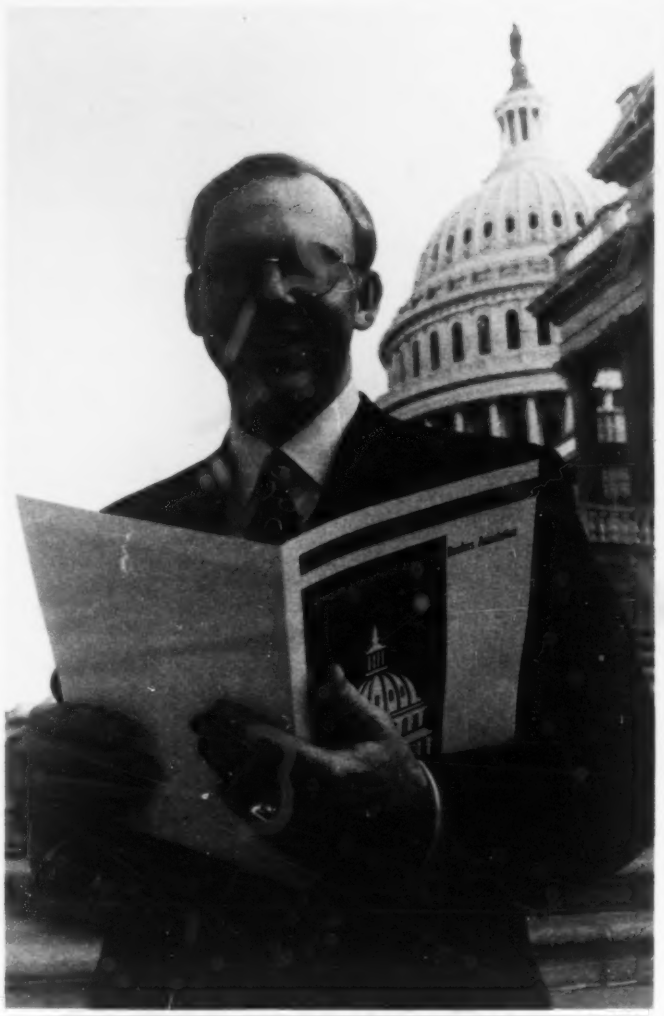
There's something about Midwestern values and being a lobbyist in Washington that just doesn't mix, muses Gary Olin, a two-franchise car dealer from Bedford, Ohio, who sounds more like a Puritan preacher than a spokesman for an import auto dealers' group.

But as the new chairman of the American International Automobile Dealers Association, a highly ...used trade association whose *raison d'etre* is free trade, Olin is on Capitol Hill with the big-bucks lawyers hired by the auto companies. He's vying for the ears of congressmen, telling them not to raise the fuel economy standard and to ignore Chrysler Corp. Chairman Lee Iacocca's pleas for more restrictions on Japanese cars.

It's a new world for the 52-year-old owner of a small Saab and Mazda store. "Like many dealers he views Washington as an Oz and peers behind the curtain to see how you work the dials," said Walter Huizenga, president of AIADA.

Indeed, Olin feels more at home at Qua Motors, just outside Cleveland on the "Bedford Automile," an unglamorous strip of aging dealerships and new monster dealerships, located past the salt box homes built for soldiers returning home after World War II. But he is learning the Capital fast. "I, like so many dealers, thought getting involved in politics

see OLIN, page 38



KEN HEINEN

In the Washington world of big-bucks lobbyists, new AIADA Chairman Gary Olin relies on his Midwestern roots and personal contacts to break through the clutter and reach out to Congress.

AIADA meets; Rafaeli named All Star

WASHINGTON — The American International Automobile Dealers Association opened its annual Automotive Congress yesterday at the J.W. Marriott Hotel.

The general session opens at 4 p.m. today with an address by Chairman Gary Olin, followed by Bill Young, president of Volkswagen of American Inc., and Rep. Newt Gingrich, R-Ga., House minority whip.

Tonight's Sports Illustrated All Star Dealer Award banquet will honor this year's winner, Peter A. Rafaeli of West German Sales Corp. (Mazda-Mercedes-Volvo) in Fort Washington, Pa. The award is the import automobile industry's most prestigious honor.

Tuesday's session includes a panel on fuel efficiency, taxes, the budget and trade issues and addresses by Sen. Robert Dole, R-Kan.; Sen. Richard Bryan, D-Nev.; economist Lawrence Kudlow; Thomas Mignanelli, president of Nissan Motor Corp. in U.S.A.; and Dick Cheney, U.S. Secretary of Defense.

GM skips auction, sells program cars to Fla. deals

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has begun shipping repurchased rental-fleet cars to southern Florida dealers, bypassing the auto auction network.

GM is selling Cadillacs, Buicks and Pontiacs from daily rental fleets directly to dealers in five Florida counties south of Vero Beach — complete with incentives, a holdback formula and an advertising fee similar to the way new cars are distributed to dealers. South Florida is home to large numbers of rental cars.

In a separate test aimed at relieving GM's huge volume of program cars, the automaker has shipped a small quantity of used Corsicas and Geo Prizms to Poland and Yugoslavia to test sales in eastern European markets.

Success there "depends on meeting government regulations and finding strong enough dealers to sell and service the vehicles," said Dale R. Hermiller, who was appointed GM's executive director of vehicle redistribution in March.

Hermiller said the Satisfaction Plus program in Florida will aid dealers in merchandising rental returns, and it should save GM trans-

Nissan USA tightens its own belt to boost incentives

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — In a drastic move to jump start sales, Nissan Motor Corp. in U.S.A. Inc. has slashed spending throughout the company so it can funnel about $50 million into a three-month incentive program.

That money will be added to the estimated $100 million to $150 million that Nissan had planned to spend on incentives in the second and third quarters of the calendar year.

Current incentive programs, Page 52

The new programs put $600 to $1,500 on three of Nissan's sexiest products — the Maxima, 240SX and 300ZX. Previously, Nissan had planned to put incentives only on the Sentra, Stanza, Pathfinder and pickup. Now, all seven products will be supported with dealer cash.

The push comes in the wake of a 23.9 percent drop in Nissan-brand sales during the first quarter of the year, when Nissan fared worse than an awful market.

Robert J. Thomas, general manager of Nissan Division, made the decision to expand the incentive program in March. But he said

Parts study says Honda is shunning U.S. suppliers

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Despite Honda's high domestic content numbers, "traditional" U.S. suppliers are providing few parts for Honda's U.S.-built cars, according to a new report issued last week. But Honda disputed the findings, saying the study used out-of-date and misleading numbers.

The University of Michigan report reveals that only 16 percent of the Accord's parts and 20 percent of the Civic's come from "traditional" U.S. suppliers — a group that excludes Japanese parts makers doing business here and U.S.-Japan joint ventures. Despite those numbers, the Accord has an domestic content level of 75 percent and the Civic 72 percent in the eyes of the U.S. government.

The focus on Honda was part of a broader study commissioned by the Auto Parts Advisory Committee, a industry council formed last year to steer Washington on international auto trade issues. The report concludes that U.S. auto suppliers will continue losing ground to their Japanese competitors through 1994, despite assurances from Japanese carmakers that they are sourcing more and more North American parts.

Honda's manufacturing operation in Marysville, Ohio, was used as a case study to illustrate the role of U.S. suppliers. The report found the Accord gives nearly three times as much business, 46 percent of its parts value, to Japanese transplant suppliers or in-house production than to U.S. firms.

Honda was selected because its cars have led all Japanese transplants in increasing domestic content. Those calculations are based on an EPA formula that allows carmakers to include such non-manufacturing factors as administrative costs, taxes, profits and advertising costs. They also include Canadian parts.

John Reilly, chairman of the Auto Parts Advisory Committee and president and chief executive officer of Tenneco Industries, said

Saturn sales in calendar 1991 totaled 11,822 through April 30.

Saturn conquests fall short

Saturn Corp. is falling somewhat short of its goal of 65 percent non-General Motors conquest sales, according to a survey to be released today.

An R.L. Polk & Co. study shows that of Saturn buyers, 23 percent owned an Asian import car, 61 percent owned a domestic car and 8 percent owned a European import. The remaining 8 percent owned a light truck.

Of the 1050 households included in the study, 404 owned a GM vehicle, 141 owned a Ford and 97 owned a Chrysler.

The study was based on the make of the newest registered car in the household at the time of the Saturn purchase. The study does not indicate if the newest car was replaced with the Saturn.

Of the owners of Asian imports, 26.1 percent owned a Honda. Among European imports, the greatest share of Saturn buyers owned Volkswagens at 38.6 percent, the study said.

The data used in the study were gleaned from Polk's first quarter 1991 model-year data base, which includes about a million vehicle owners, including about 73 percent of all Saturn buyers.

Saturn sales began last October.

Polk is a Detroit-based publishing and statistical services firm.

Bad coolant: Saturn will replace 1,836 cars

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Saturn Corp. said late Friday that it will voluntarily replace 1,836 cars that were filled with bad engine coolant.

The carmaker revealed that the cars were built with an improperly mixed engine coolant. Saturn will give customers new cars of equal value, spokesman Bill Betts said.

"The cars can be repaired, but we don't want to inconvenience our customers," said Betts.

About 1,100 affected cars are in customers' hands, the company said. Remaining models are in dealer inventory.

The coolant supplier, Texaco Refining and Marketing Inc., said the mistake resulted from "a blending accident" involving 59 barrels of coolant sent to Saturn. The coolant was used in cars built between March 25 and April 4.

Betts said that Saturn had begun receiving field reports of problems with engine cooling systems. The improperly mixed antifreeze could result in leaks in water pumps and damage to heating coils, he said.

"We still don't know the long-term effects of this," Betts said. "We felt it would be better for our customers if we simply give them a new car. It's quick. It's clean. It exceeds customer expectations for this situation."

Assuming the average manufacturer's cost is $7,000, the move will cost Saturn an estimated $12.8 million. But Saturn indicated that Texaco would bear some of the replacement costs.

"All of our suppliers share in both the rewards and the costs at Saturn," said Nicole Merritt, a Saturn spokeswoman.

The company sent notices last Friday by overnight delivery to owners of the affected cars.

Earlier this year, Saturn recalled 1,500 cars over a faulty bracket on front seat backs. Mechanics drove to many customers' homes to replace the bracket.

Quayle listens to Detroit before Japan trade visit

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Vice President Dan Quayle, on a visit to the nation's auto capital Friday, said he will travel to Japan later this month armed with numbers from the University of Michigan study of Honda suppliers. (See above story.)

But although he said the report lends evidence to concerns that the Japanese have transplanted their own industries to the United States instead of offering opportunities to U.S. suppliers, he said he will not head to Japan advocating protectionism. Quayle said he hopes to help knock down barriers that will allow U.S. companies greater access to the Japanese market.

"I go as a friend of Japan," he said. "Japan is now an economic superpower. Japan owes it to its people" to open itself to U.S. products.

Quayle's visit to Japan is scheduled for May 19-23. In preparation for that trip, he visited Detroit Tool Center Inc., which supplies machinery and tooling for Big 3 products and the Honda Civic.

He also met with five officials from the Big 3, including Ford Motor Co. President Philip E. Benton Jr. and Chrysler Corp. Vice Chairman Robert S. Miller. The meeting was part of a series of recent exchanges between politicians and U.S. industry officials.

Friday, Quayle took the administration's strongest stance to date against changing corporate average fuel economy. "The administration does not back any increase or change in CAFE," he said.

He said that if Nevada Sen. Richard Bryan's bill passes and forces a 40 percent change in fuel economy by model year 2001, "there will be a massive loss of jobs."

Quayle will go to Japan as chairman of the President's Council on Competitiveness and one of the Bush administration's point men on free-market developments.

Quayle has been a key player in trade talks. When he was a senator he oversaw the formation of the Auto Parts Advisory Committee, which advises the Department of Commerce. The effort is still referred to as the Quayle initiative.

With Quayle on the Detroit trip was Michael Farren, undersecretary of commerce for international trade. Farren has warned Japanese auto industry officials several times in recent months that the parts trade imbalance would be detrimental to Japanese business in the United States.

Farren said the government is more likely to pressure Japan during trade negotiations rather than through retaliatory action, as it already has threatened to do in the construction business.

Saturn, NHTSA trade barbs over crash numbers

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A federal safety official says Saturn's score in a government-conducted crash was similar to its performance in a General Motors test, disputing Saturn's argument that the program doesn't reflect a car's safety.

In the latest round of National Highway Traffic Safety Administration crashes, the Saturn SL2 had the highest passenger head injury score of eight similar-sized cars. The Saturn scored 1,018 for head injuries on the passenger side. NHTSA says serious head injury is possible at scores over 1,000. On the driver side, the Saturn, which is equipped with motorized safety belts, scored 918.

Saturn defended its car and said the crash "does not reflect the actual safety performance of our vehicles," because results vary every time the crashes are performed.

But Barry Felrice, NHTSA's associate administrator for rule making, said GM conducted its own 35 mph crash on the SL2, and the scores were similar to those of the NHTSA crash. The GM passenger scores were lower, but not significantly, Felrice said.

"These numbers should not be a surprise to them," Felrice said. "We replicated their test."

Saturn declined to respond to Felrice's comments.

LIGHT-CAR CRASH RESULTS

Table lists index scores for driver and passenger in 35-mph crash program, for cars weighing 2,000-2,500 pounds. Scores over 1,000 indicate possible head injury.

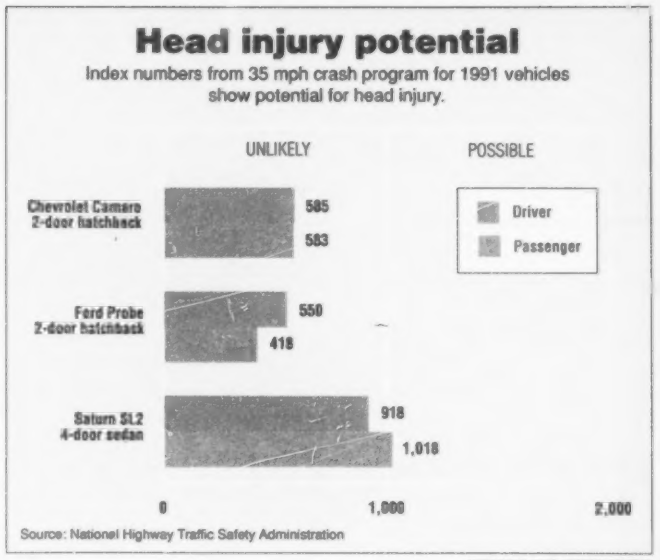
Vehicle	Driver	Passenger
Mitsubishi Mirage	960	772
Mazda Miata	920	531
Saturn SL2	918	1,018
Toyota Celica	834	685
Hyundai Excel	696	419
Acura Integra	585	637
Nissan Sentra	583	681
Ford Escort	434	450

Source: NHTSA

NHTSA's crashes, known as the New Car Assessment Program, have been controversial. The agency picks about 35 vehicles for the program annually to crash. Like Saturn, other automakers have argued that one reading isn't enough and that the crashes provide limited safety information.

In addition, the test is done at 35 mph, even though government safety standards only require cars to pass a 30 mph test.

NHTSA disagrees with maker assertions that the data is meaningless. "Our position is that it doesn't tell us the performance in side or rollover, but frontal crashes account for half the fatalities and deaths (in automobiles), and most of the frontal crashes are at 30 or 35 mph into a barrier," he said.



AUTOMOTIVE NEWS / MARTHA GRATTAN

Felrice said the Saturn SL2 crash film shows the dummy driver's head hit the steering wheel. The passenger dummy's head only grazed the instrument panel, but "it whipped around a lot and went forward and way down."

High scores are usually caused by a combination of factors, including "the performance of the frontal structure and how well it absorbs energy and how quickly the seat belt locks up and prevents motion," Felrice said.

NHTSA says the results provide comparative data for consumers to use when shopping for vehicles. It cautions that comparisons are meaningful only when made between vehicles within an approximate weight range of 500 pounds. The Saturn was in the 2,000-pound to 2,499-pound category.

British manufacturers dispute price-fixing charges

By Ed Wendt
SPECIAL CORRESPONDENT

LONDON — British manufacturers last week launched a major offensive against a Monopolies and Mergers Commission finding that cars sold in the United Kingdom typically cost thousands of dollars more than the same vehicles sold in Continental Europe.

The commission, the rough equivalent of the U.S. Justice Department's antitrust division, provisionally ruled two weeks ago that British and Japanese automakers have illegally fixed the supply and price of at least 25 percent of the cars sold in the United Kingdom each year since 1975.

The alleged monopoly has resulted in British vehicle prices being far out of line with those in other European countries, the commission said in its preliminary ruling. After a period of public comment, the commission will forward a recommendation to the Cabinet, which is expected to issue a final decision in September.

EQUIPMENT-ADJUSTED PRICE IN POUNDS STERLING

Selected car	Great Britain	Germany	France	Belgium	Netherlands
BMW 318i 4-dr.	£14,300	11,107	12,545	12,462	15,078
Vauxhall Cavalier L 1.6-liter, 5-dr.	10,730	9,354	9,164	9,361	11,063
Vauxhall Astra L 1.4-liter, 5-dr.	9,008	7,714	7,409	7,735	9,278
Ford Escort LX 1.4-liter, 5-dr.	9,470	7,080	7,018	6,850	8,284
Volkswagen Golf CL 1.6-liter, 5-dr.	9,750	7,697	8,443	8,037	9,587
Fiat Tipo DGT 1.4-liter	9,070	6,840	7,406	7,200	7,060

SOURCE: U.K. Monopolies and Mergers Commission

Ford Motor Co., General Motors/Vauxhall and Rover Group last week charged that the study, conducted by Ludvigsen & Associates, distorts the facts and is misleading. They are asking the secretary of state to reject the ruling.

"Vauxhall disagrees with the suggestion that pricing is detrimental to the U.K. consumer when exchange rates, equipment levels and other transaction costs are taken into account," said the spokesman. "Vauxhall has made its study available to the (commission) on a confidential basis."

A spokesman said Ford of Britain is preparing an official response to the commission and will explain any pricing differentials.

"One of the things they didn't consider is dealer incentives and trade-in prices," he said.

But Nissan U.K., the privately owned distributor of Nissans in Britain, said the report supports its long-time claim that Nissan cars are priced higher in Britain than in Europe. Because of the pricing dispute, Japan's Nissan Motor Co. has terminated Nissan U.K.'s exclusive distribution agreement as of the end of the year.

Britain's semiofficial Consumers Association called on the government to end the alleged monopoly.

"The study completely vindicates what CA has been saying for 10 years — that the same cars can be thousands of pounds cheaper in Europe compared to the U.K.," said Stephen Locke, head of the association's policy unit.

"The details of the (commission's) work blow out of the water the arguments of manufacturers that price differences are due to special factors — such as exchange rate movements, specification differences and discounts," he said.

Locke said the commission's conclusions closely parallel the consumer group's findings of huge price differences between Britain and the Continent.

Toyota tops truck survey

AGOURA HILLS, Calif. — Toyota was rated the top brand in J.D. Power and Associates' 1991 study of light-duty truck customer satisfaction, product quality and dealer service.

The study asked owners to evaluate product-related issues as well as customer-related aspects such as treatment when taking their vehicles to dealers for service.

The survey showed an improvement in dealer treatment of customers for many makers, said J.D. Power III, company president.

Satisfaction by light-duty truck owners improved eight points over last year, with the CSI average now 123 points.

Power said much of the improvement came from increases in participants' customer handling scores, which trace satisfaction with dealer and service experiences. The overall industry customer handling score was 131, 10 points better than 1990.

While Toyota and Mazda ranked first and third in the overall truck CSI rankings, the Chrysler Town & Country minivan, which Power rated as a separate brand, finished second in overall truck CSI.

Ford showed the highest increase in CSI scores of any nameplate from last year.

The study included 55 models.

Equal pay for warranty repairs will cost consumers, study concludes

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — Consumers will either pay more for cars or get less warranty coverage if dealers succeed in getting paid as much for repairing cars under manufacturers' warranty as they get for retail repairs, a new study shows.

The study, by Glassman-Oliver Economics Consultants of Washington, also said dealers would be hurt by the change. Vehicle prices rise when state laws require manufacturers to reimburse dealers at retail rates for warranty work, according to the study. That lowers demand and means lost profits for both dealers and vehicle makers.

The study comes three months after the National Automobile Dealers Association called on domestic makers and importers to raise the compensation paid to dealers for warranty work.

Two industry groups, the Motor Vehicle Manufacturers Association and the Association of International Automobile Manufacturers, commissioned the study.

Another study, by the Booz-Allen Hamilton consulting firm, is scheduled to be released in a few weeks. It will show the nation's average car dealership subsidizes the manufacturer's efforts by $50,000.

But John Whatley, assistant general counsel at the Association of International Automobile Manufacturers, said the most striking aspect of what has been seen of the Booz-Allen report is that the "gross margins on repair, especially labor, are huge." He cited one example that showed that "the gross margins for retail labor and warranty labor are $1.90 and $1.80, respectively, for every dollar of cost. That means the consumer pays $2.90 for service that costs the dealer $1.00. Margins on retail parts and warranty parts are 56 cents and 29 cents respectively."

He spoke to a meeting of the National Association of Attorneys General last week in Memphis.

For its part, NADA, noting it had not seen the Glassman-Oliver study, said it was "unfair" to say the dealer network is responsible for higher costs to consumers when dealers seek "fair and equitable compensation for warranty work."

In general, most states use the dealer's retail rate for labor charges but require "reasonable" reimbursement for parts.

But recently, he noted, state legislatures have been moving toward also requiring use of an independent flat rate manual, which allows a longer time for repairs than the manufacturer's manual. There has also been a move to change the "reasonable" reimbursement for parts to either a "retail" equivalent or a cost-plus fixed percentage rate. Both mean higher costs to the automaker.

In addition to showing the differential between labor and parts costs of warranty versus retail work, the NADA study is also expected to reveal that as a percentage of sales, indirect costs connected with warranty work are about 7 percent more than for retail work. In addition, the NADA study apparently stresses that some warranty work is so complex as to necessitate "extraordinary" labor time.

SALES

FROM PAGE 3

Ford Motor Co. posted the worst year-ago comparison of the Big 3, and of all major carmakers, with combined sales of cars and light trucks down 20.7 percent in April to 240,681.

Counting both cars and trucks, imports and U.S.-built vehicles, Japanese marques raised their share for April to 25.5 percent, up 2.4 points.

The Big 3 market share was 70.3 percent, down 2.4 points.

For the Japanese, Nissan/Infiniti and Honda/Acura together picked up a point of share.

Chrysler did the same for the Big 3 — thanks to Eagle, Jeep and other truck sales — but Ford Motor Co. dropped 2.1 points by itself.

Japanese share gains are accelerating. For the first quarter, they had 24.7 percent of the market.

Despite some improvement in showroom traffic, dealer orders and consumer sentiment, consumers continue to take a "wait and see" attitude toward spending, said Robert L. Rewey, vice president of sales operations for Ford North American Automotive Operations.

Rewey said in a prepared statement that consumers are waiting for economic indicators such as employment and income data to signal the end of the recession, and for lenders to loosen up credit approvals.

He said buyers also are waiting for interest rates on installment debt to fall, following recent declines in the prime rate and the discount rate. He called for a "government policy to stimulate a resumption of economic growth."

Referring to Ford's poor April car sales, Rewey said deliveries to daily rental companies were cut in April, "but a more normal sales pattern is expected in May."

Nissan Motor Corp. in U.S.A., which was running 21.7 percent behind 1990 through the first quarter, had a renaissance of sorts in April, when it was just 5.4 percent behind. Looking just at cars, Nissan was up, thanks largely to big gains by Infiniti.

Infiniti spokeswoman Debra Sanchez Fair attributes the gains to more dealers and product. She said Infiniti had 84 dealers in April, 21 more than last year, and has added the G20 and the M30 convertible to the lineup. Infiniti also began offering a no-money-down lease on the top-of-the-line Q45 for qualified buyers, from April 19 through the end of June.

Nameplates that achieved higher sales than the year-ago month included Mazda, Mitsubishi, Subaru and Jeep, marking the first month this year that Jeep has topped year-ago sales.

Dodge, Buick, Mercury and Acura managed to sell about the same number of cars last month as April 1990, which wasn't bad considering the rest of the market.

Automotive News Staff Reporter Kristine Stiven Breese contributed to this report.

Taiwan maker Yue Loong has Feelings for Europe

By Stephen Vines
STAFF CORRESPONDENT

HONG KONG — Taiwan's Yue Loong Motor Co. said last week it will begin exporting its new Feeling 102 sedan to Europe next month. The 102, which comes in 1.5- and 1.7-liter versions, is Taiwan's first locally engineered and produced car.

The company said it has signed a contract with Abemy Holdings, a Dutch company, to sell 100 cars per month for a trial period covering the remainder of the year.

A Yue Loong spokesman described the deal as an "experiment and the first step for our overall export project." He would not identify other target markets for the 102, and said the car's European price was not yet available.

The Dutch company acts as an agent for Mitsubishi Motors Corp. of Japan, Hyundai Motor Corp. of South Korea, and Poland's FSO, which builds Fiats under license.

Based on the Nissan Stanza and powered by Nissan's four-cylinder CA 16S engine in 1.6- and 1.8-liter versions, the Feeling 101 range was introduced to great fanfare in October 1986. Quality and design problems soon gave the car a bad reputation.

The revamped model, the 102, was brought to market in June 1989. The car has won high marks for quality, but has not lived up to Yue Loong's sales expectations.

The company, Taiwan's second largest producer after Ford Lio Ho Motor Co., assembled 39,059 passenger cars in 1989, the last year for which firm data are available.

PICKUPS

FROM PAGE 3

pulling the beds off regular cab Sportside models and switching them with extended cab Fleetsides to create an extended cab Sportside in the absence of factory models.

Steve Fly, new-truck sales manager for Friendly Chevrolet, said the practice "robs you of all your regular cab Sportside" models and he looked forward to GM filling this need.

Ford, for its part, has been seeking ways to increase its F-series pickup truck sales.

One tact it began taking is to allow consignment pool companies to begin customizing F-150s under similar terms to those of van conversions. (See story on Page 18.)

Jerome Mittman, Ford Division RV sales manager, said consignment pool pickup truck upfitters get the same special floorplan interest rate and other benefits as van customizers.

Chevrolet and GMC Truck pool companies have been customizing pickups for the past couple years.

Car stockpiles increase to 75-day supply

Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Inventory levels crept higher in April as manufacturers cautiously stocked up on cars expecting a spring selling season that failed to appear.

The industry had a 75-day supply of cars as of May 1, up five days from the previous month. A year earlier, car inventories were 65 days.

Compared with imports, domestic inventories were closer to the 60-day benchmark. Domestics were at an average of 68 days, including transplants. Imports were at 93 days.

Chrysler Corp. had the fattest car inventory of the Big 3, at 102 days, up from 97 days the previous month, and 77 days in the year-ago month. Nevertheless, Chrysler's April sales were down the least of the Big 3, compared with the year-ago month.

Nissan Motor Corp. in U.S.A. had the fattest Japanese-badged inventory, at 114 days, down from 137 days the previous month.

Among the major companies in the United States, Toyota Motor Sales U.S.A. Inc. had the leanest inventory, at 50 days. But Toyota's inventory climbed from 37 days at the beginning of the month, as it the largest sales loss in April of the Japanese Big 3. The company revealed it was cutting imports by 25 percent in this quarter (story on Page 8.)

NISSAN

FROM PAGE 1

there was not enough money in the fiscal 1991 budget to fund the new programs. So Thomas decided to look for the money internally, passing the hat from department to department, asking which programs could take a hit.

As a result, "damn near everything that didn't directly affect wholesale and retail sales was cut," Thomas said.

Thomas added that he didn't ask parent Nissan Motor Co. Ltd. to expand the budget "because we knew this was do-able internally, and this was a U.S. responsibility, not a Japanese one." While the plan was aimed at helping dealers, Thomas said it has helped Nissan, too, by making the company more lean and focused.

The cuts, which range in size and severity, include:

- Cancellation of all national television advertising for July and September. Nissan instead will run less expensive local spot buys.
- Postponement of the rollout of an ambitious plan to shift decision making and authority from headquarters to its regions. A pilot project in Dallas will continue, but expansion into Nissan's other regions will take place more slowly than originally planned.
- Suspension of a co-op advertising plan for parts and service.
- Pared-back travel budgets. The company has also centralized the way it orders and stocks office supplies for economies of scale.

The cuts represent "our recognition that there's a hierarchy of needs," said Thomas. "You can't do everything, so you have to do what needs doing first."

Thomas said dealers were in rough shape after February, "and post-war euphoria did nothing for sales." He added that the incentives were needed to meet Nissan sales objectives for the fiscal year, which ends Sept. 30. He would not say what those objectives were.

Nissan did not reveal the amount raised to service the new incentives. *Automotive News* estimated it by using 1990 sales for the Maxima, 240SX and 300ZX and multiplying that by the dollar amount of each new incentive over the 15-week program.

In addition, Nissan is offering lease incentives and bonus payments for dealers who meet sales objectives.

The new incentives began April 20 and they appear to be working, according to Bill Bivens, national merchandising manager. As an example, Bivens said dealers sold twice as many Maximas in the last 10 days of April than they had in the first 20. Nissan car and truck sales were down 7.2 percent in April, while the overall market dropped 13.8 percent.

Nissan dealers seem pleased with the new direction. "As a group, we've been pretty hostile to Nissan because market share has slipped so much, especially in major markets relative to Honda and Toyota," said Charlie Troncalli, general manager of Troncalli Nissan in Atlanta.

"But the dealer advisory boards began putting a lot of pressure on the company to get more help. I think that made a difference."

Still, he thinks Nissan should put more money behind some of the lines. "Especially at entry level, we've just handed that segment over to Toyota and Honda," he said.

STUDY

FROM PAGE 2

the industry will be "very surprised and disappointed to see how little progress is really being made" by the transplants in sourcing U.S components.

"Frankly, we picked Honda for the case study in hopes that it would show us if some progress was being made," Reilly said. "That clearly is not the case."

But Honda spokesman Roger Lambert called the report "politically motivated" and "heartbreaking in its narrow view."

Researchers at the university's Office for the Study of Automotive Transportation used 1989 data to measure U.S. content in the Honda vehicles.

Lambert pointed out that Honda has increased its number of North American suppliers from 180 in 1989 to more than 240 this year.

Last year, Honda completed a $600-million expansion of its Anna, Ohio, engine plant, which provides drivetrain components to Honda's two U.S. assembly plants and one in Canada.

While Lambert said the study's numbers are too low, he could not say specifically what they were in 1989, or are now.

"The numbers don't reveal the true progress of what we're doing at Honda. But they are several points higher than what they say," he said.

The report said that because of increasing transplant production and the growing demand for Japanese-made aftermarket parts, the U.S. parts-trade deficit with Japan will more than double from $10.5 billion in 1990 to $22 billion in 1994.

The study predicts that the total U.S. automotive trade deficit with Japan will increase from $31 billion currently to $46 billion by 1994.

Transplant factories such as Honda's will give Japanese carmakers 2.8 million units of production capacity by 1994. Several transplant vehicles now boast domestic content levels of more than 70 percent.

The report warns that growing Japanese-vehicle market share will worsen the position of U.S. suppliers by displacing Big 3 business with transplant business, which still offers American firms small reward.

The argument is bound to raise the political heat on Japan's growing automakers.

The auto sector — especially auto parts — has emerged as the single largest contributor to the $41-billion U.S.-Japanese trade deficit.

Partially due to new assurances from Japanese carmakers in early 1990 to buy more U.S. component entry, U.S. trade officials last summer opted not to impose "Super 301" sanctions on Japan, a move that would have labeled Japan an unfair trading partner and blocked certain U.S.-Japanese commerce.

However, 301 discussions are again emerging in Congress.

In Senate hearings last week, Congress heard testimony in favor of increased trade pressure on Japan's automakers.

During one discussion, Sen. Carl Levin, D-Mich., chided U.S. Deputy Trade Representative Linn Williams for the U.S. Trade Representative office's lack of results in improving U.S. parts sales to Japan.

Williams presented a 25-page testimony on trade concerns with Japan, but it did not make a single reference to auto parts.

Reilly said that the Auto Parts Advisory Committee will make recommendations to the U.S. Department of Commerce within the next 30 days on what measures to take to ensure that U.S. suppliers receive a greater share of the Japanese parts trade.

Honda's Lambert said the University of Michigan study indicated a "basic lack of understanding of how the auto industry works" because it insinuates that Honda — and all of the transplants — are using in-house parts.

"The study seems to be criticizing us for supplying our own engines and transmissions," he said. "Doesn't General Motors build its own engines? Doesn't Ford make its own transmissions?"

"The problem here is that the auto industry is contracting and there are less opportunities for U.S. suppliers," Lambert added. "The real damage to the U.S. supplier industry has been done by GM, Ford and others cutting back the number of suppliers they use. We, on the other hand, are increasing our sourcing in North America. We represent new business."

Honda recently said that 43 North American suppliers would participate in the early design and development of the 1994 Accord. That marks the first time that U.S. suppliers have been involved so early in a product developed in Japan.

Those 43 suppliers include Japanese firms with North American manufacturing operations and U.S.-Japan joint ventures.

Cars	$500-1,500

Chevy honors Ford rebates on big trucks

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Several importers announced new or adjusted consumer and dealer incentive programs, and Chevrolet fueld the truck feud by announcing it will honor a $500 direct-mail rebate for Ford trucks.

Chevrolet is honoring Ford's $500 direct-mail "Extra Special F-Series Savings Offer" coupons on 1991 F-Series pickup trucks. Chevrolet is giving the money toward the purchase of 1990 and 1991 C/K full-sized and cab-chassis pickups through June 1.

"We've been saying that more people are switching to Chevy trucks," said Kurt Ritter, Chevrolet marketing manager for trucks. "We want that to continue."

Chevrolet said the coupons can be used in addition to existing truck incentives.

American Honda Motor Co. Inc. decreased the factory-to-dealer incentive on the 1991 Accord (excluding XE special edition) from $500 to $400. Also, the company is paying dealers $400 on 1990 Accords and 1991 four-door Civics. Honda's program expires June 3.

"Bowing to the demands of economic uncertainty during this current downturn," **Hyundai Motor America** increased the consumer incentive on two of its Excel models, said Tom Ryan, vice president of marketing for Hyundai.

The payment on 1990 and 1991 three-door GS and four-door sedan Excels is now $1,000, up from $700. The program expires July 2.

Mazda Motors of America Inc. dropped customer incentives on 1991 and 1990 cars and is offering $500 to $1,000 on 1991 4x2 and 4x4 trucks. The rebate varies from region to region and expires June 3.

Through June 30, **Peugeot Motors of America Inc.** is offering buyers a choice of loans for its 1991 405 models: interest-free for two years; 1.7 pecent for three years; or 2.7 percent for four years. On its 505 models, the interest rate is 0 percent for two years; 2.7 percent for three years; and 4.7 percent for four years. A 20 percent down payment is required. Peugeot is also offering cut-rate leases for two-, three- and four-year terms.

Special Correspondent Durrell Pressley contributed to this report.

Canada transplants face higher hurdle on content

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

HAMILTON, Ontario — Transplants in Canada face spending at least another $1 billion annually on North American parts if a new trade proposal is enacted.

Canadian parts makers, the U.S. government and unions on both sides of the border have called for a change in the U.S.-Canada Free Trade Agreement to require Canadian vehicles to reach 60 percent North American content to enter the United States duty-free.

But the Canadian government and General Motors both oppose the idea and their opposition has blocked the proposal.

The change would force three Japanese-run auto companies to find North American sources for many more parts or pay U.S. import duties. Canadian vehicles currently must have at least 50 percent North American content to side-step the 2.5 percent duty on cars and 25 percent on trucks.

Honda of Canada Manufacturing Inc. builds the CRX in Alliston, Ontario, and Toyota Motor Manufacturing Canada Inc. produces the Corolla in Cambridge, Ontario.

CAMI, a 50-50 joint venture between Suzuki Motor Co. Ltd. and General Motors in Ingersoll, Ontario, builds the Suzuki Swift/Geo Metro and the Suzuki Sidekick/Geo Tracker.

Hyundai Motor Co. and Volvo AB also assemble cars in Canada, but both already pay duties on cars exported to the United States because their North American content is below 50 percent.

The Japanese-run transplants say they are at or above the 50 percent level now, although CAMI is currently at odds with U.S. Customs over the content of its vehicles. At question is whether the content may include finance fees on capital that an automaker borrows to purchase production equipment.

Nick Hall, a spokesman for GM of Canada, said the 60 percent rule would likely force CAMI to "either invest in expensive powertrain facilities or become less competitive by having to incur the added costs of duty payments.

"For some manufacturers, it might prove more economical to pay the duty charges instead of raising the content level," Hall said. "I don't think that's what anybody has in mind."

Jim Carter, director of policy with the Automotive Parts Manufacturers' Association of Canada, discounted the GM claim. "Our study of the situation indicates that CAMI can accomplish a lot higher content without building a powertrain plant," Carter said. "They could make large gains by sourcing trim components and stampings."

The Motor and Equipment Manufacturers Association, a U.S. trade group, estimates that raising the requirement to 60 percent would mean between $1.1 billion and $1.8 billion (U.S. currency) in additional annual parts sales to the Canadian transplants. Carter said his organization uses the more conservative figure.

The proposal has been endorsed by the Automotive Select Panel, an industry committee established to advise the two governments on automotive trade issues, but the proposal is "in a legislative limbo," Carter said.

But a recent cabinet-level change in the Canadian government is giving proponents new hope. Canada's minister of industry and international trade, John Crosby, recently resigned his post. Crosby, who opposed the increase, was replaced by Michael Wilson, whom observers believe to be more supportive of the change.

Carter said that once the Canadian government agrees to the idea, it would likely be implemented quickly.

"Our hope is to have it enacted before the trilateral trade negotiations with Canada, the United States and Mexico begin," he said. "We need to go into those negotiations with a stronger hand."

PROGRAM

FROM PAGE 1

portation costs and auction fees.

The volume of program cars industrywide has swelled to more than 1.5 million this year. By some estimates, GM alone could pass the 800,000 mark by year's end.

Some industry officials say GM's aim is to remarket two-thirds of its program cars to dealers directly. But Hermiller said he doesn't expect direct distribution to reach that high volume.

In the four-month test program, dealers order the cars from a shopping list faxed to them. Then GM sends them an invoice, a window sticker with a manufacturer's suggested retail price, and a buyer's guide required by the Federal Trade Commission designating the vehicles as used cars.

Satisfaction Plus vehicles will carry a sticker similar to the one on new cars except that it will state two prices: the new-car sticker price and a suggested price of the car used. For vehicles with less than 8,000 miles, the vehicles carry a used price of 90 percent of the original suggested retail price, dealers say. The price drops for vehicles with more than 8,000 miles.

Program cars are a sticky problem. Manufacturers sell them to daily rental companies, repurchase them at a guaranteed depreciation rate, then resell them to franchised dealers through auto auctions.

The Big 3 use quick sales to rental companies to keep plants running. They offer daily rental companies incentive programs based on mileage and length of service for cycling vehicles in their fleets. For example, a new Ford program calls for a vehicle to stay in daily rental fleets for six months or 15,000 miles. Moreover, the Big 3 and two importers own all or part of daily rental companies.

Although auction prices are up from last fall, automakers still absorb hefty losses on program cars. Ford Motor Co. loses an estimated $3,000 per vehicle and GM loses and average of $4,000 per vehicle, according to the Ford Dealers Alliance, a dealer watchdog group, and other industry sources.

Program cars are a headache to automakers and dealers who complain they undermine the franchise system and substitute for a new-car sale. But dealers concede they make higher profits on program cars.

Some dealers like GM's direct distribution program. "The program is worthwhile because the window sticker gives these vehicles instant credibility," said Ed Williamson, owner of Williamson Cadillac Co. in Miami, who attended planning meetings with GM.

Hermiller said GM considers current auction prices when figuring prices. Dealers are given a $200 damage-repair allowance.

Kevin Kelley, owner of Palm Pontiac in North Lauderdale, Fla., said the prices are similar to those at auction. He said he expects dealer grosses to be the same as on cars bought at auction.

A customer who purchases a direct-distribution program car may bring it back to the dealership within 30 days or 1,000 miles and have the price applied toward the purchase price of a new car.

Hermiller said price was the major concern of dealers in the program. He said GM is closely monitoring auction prices.

"The keystone is price," said Williamson. "If the direct distribution cars are a few bucks more than the auction, then I will buy them. But if the price difference is $1,500 or more, then I'll send my guy back to the auction."

Miscellaneous includes estimates for Mack, Volvo-White, Kenworth, Peterbilt, Freightliner, Mercedes-Benz

Big 3 hike production

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

The Big 3 are scheduling extensive overtime to step up vehicle production for the spring selling season.

Ford Motor Co. scheduled daily overtime this week at the Atlanta and Chicago car plants and the Louisville, Ky., truck plant.

General Motors scheduled Saturday overtime last week at the Linden, N.J.; Wilmington, Del.; and Arlington, Texas, car plants and the postal line at the Moraine, Ohio, truck facility.

Chrysler Corp. scheduled Saturday overtime last week and daily overtime this week at the St. Louis (No. 2) minivan facility.

In April, U.S. automakers produced 446,015 units, the lowest production for that month since 1958 when 316,594 units were built.

Monthly production has continued to rise since February. April car production is up 3.11 percent over March, but remains behind 1990 by 12.42 percent.

Last week 115,162 cars were scheduled, 0.42 percent behind the prior week and 18.21 percent below the year-ago week.

Truck production in April was 306,616 units, the highest monthly production so far in 1991 with an increase of 26.26 percent over March.

Last week's estimated truck production was 69,924, 12.30 percent below the prior week and 25.37 percent below the year-ago week.

GM and Chrysler have all facilities running this week with the exception of GM's Lansing, Mich., A plant, which is down for model changeover. Ford is the only manufacturer idling a plant due to sluggish sales. Its Kentucky Truck facility in Louisville, which builds heavy trucks, is down for one week.

Ford also has reduced production to a single shift at the following truck facilities this week: Edison, N.J.; Michigan Truck in Wayne, Mich., and Lorain, Ohio.

CANADA: Canadian vehicle production is also increasing. GM announced it will build an additional 3,400 Chevrolet and GMC full-sized pickups in June. Saturday overtime at the Oshawa, Ontario, plant begins May 25 and ends July 13.

GM's truck plant in Scarborough, Ontario, worked Saturday overtime last week.

Ford has scheduled daily overtime this week at the St. Thomas, Ontario, car facility.

Chrysler reports the Bramalea, Ontario, facility will be idled next week.

Canadian car production in April was 99,896, the highest monthly production so far in 1991.

Truck production in April was 69,926, 2.70 percent below March and 9.54 percent below 1990.

Kevin Kelley sells a large volume of program vehicles at Palm Pontiac. Kelley said he bought all 25 offered to him last week through the direct-distribution program.

"GM is doing this right," he said. "There is no huge investment required on the part of dealers like the Ford program."

Ford Motor Co. launched its first pilot dealerships selling only used rental returns this month in Albuquerque, N.M., and Foxboro, Mass. Ford dealers in the program have to operate a separate facility. Ford continues to use the auctions.

Auctions are concerned about direct distribution. They have spent hundreds of millions of dollars upgrading and building facilities and buying land to store program cars. "Of course we're not happy about the pilot program," said Michael J. Richardson, president and chief executive officer of Anglo American Auto Auctions, based in Nashville, Tenn.

Huge auction chains emerged in the mid-1980s, their acquisitions driven by ever-increasing volumes of program cars. Anglo American, Atlanta-based Manheim Auctions and GE Capital Auto Auctions in Barrington, Ill., went on hectic buying sprees acquiring independent auctions.

GM flocks north to learn from lean, mean CAMI

Factory is two plants in one

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

INGERSOLL, Ontario — One of the hottest tours on the General Motors circuit these days is a low-profile car plant along the Detroit-to-Toronto highway.

Armed with questions about Japanese manufacturing methods and labor-management ways, GM engineers and factory types are coming in droves to see CAMI Automotive Inc., GM's $500 million joint venture with its Japanese affiliate Suzuki Motor Co. Ltd.

So many are coming, in fact, that late last year the factory had to open a liaison office nearby in London, Ontario, about 110 miles northeast of Detroit, to conduct the tours. More than 700 GM personnel have shuffled through the two-year-old factory since last October. A full-time staff of three does nothing but book the visits.

What's so wondrous about a Canadian factory that embraces secrecy to the point of not releasing production figures?

Like GM's ambitious $3.5 billion Saturn project in Tennessee and its seven-year-old joint venture with Toyota Motor Corp. in California, CAMI is a small-car laboratory for GM. Each of the three plants has been labeled "an experiment" for the carmaker to learn ways to make small cars in North America.

The California plant, New

BIG DEALS

Nation's largest dealers grow on diet of fast-turn fleet cars

By Edward Lapham
MANAGING EDITOR

Despite the tough times that plagued many U.S. new-car dealers last year, the biggest dealers used fleet sales, particularly fast-turn program cars, to get even bigger, according to the *Automotive News* list of America's largest auto dealers.

The list, which ranks top-producing dealerships for domestic and imported franchises, was compiled for the *1991 Automotive News Market Data Book*, which will be published May 29.

The ranking is based on total new-unit deliveries — car and truck, fleet and retail — for calendar 1990.

It features the 10 highest volume franchises for 36 makes. The entire list of 360 top-selling franchises will be published in the *Market Data Book*. Top 10 dealer rankings in six categories appear on Page 26.

The dealership located in the United States that reported the most total new-unit deliveries for a

East, West meet again with Ford-Nissan van

By David Versical
NATIONAL EDITOR

FARMINGTON HILLS, Mich. — First, the Japanese built Japanese cars for the Big 3. Then Ford Motor Co. built a Japanese-developed Escort for itself and a Ford-developed Navajo sport-utility for its Japanese partner, Mazda Motor Corp.

Now Ford and another Japanese company, Nissan Motor Co. Ltd., are adding a new strand to the complicated web of trans-Pacific automaking relationships. Next year, Nissan will hand over a minivan it is developing for production at a Ford assembly plant. About two-thirds of the 135,000 produced annually will be sold as the Mercury Villager; 50,000 will be called Nissan Quest.

Nissan unveiled a prototype of the Quest last week in the sun-baked, high-walled courtyard of its new research and development center here. The vehicle's heritage is an example of East-West cooperation — within Nissan and outside Nissan — that allowed the project's general manager, Makoto Moriya, to describe it as "very American, very Nissan" in the same breath.

It is an upscale minivan, contemporary but not aggressive in styling. Its hood slopes low like a car's, giving rise to Nissan's description as a "car-van." And while it appears to be no bigger than its competition, Nissan thinks flexibility will give the Quest/Villager an advantage. With seats that can be removed, turned into table tops or slid out of the way, the minivan's interior can be redesigned daily.

The Quest/Villager was conceived at the Nissan Technical Center in Japan. Styling was done at Nissan Design International Inc. in San Diego. Japanese engineers who began development in Japan finished the job in Michigan. And it will be built starting next April at a Ford plant in Avon Lake, Ohio.

Nissan said it unveiled the Quest so far in advance because it wanted to explain its lead role in developing the vehicle, which has sometimes been referred to as a "Ford-Nissan minivan." A Ford spokesman said later that Ford wasn't too thrilled about Nissan's decision to show off the vehicle this early.

The differences provide an example of the interests that had to be balanced in carrying out the first shared project between the No. 2 automakers in Japan and the United States. Unlike Mazda, of which Ford owns 25 percent, there is no shared equity between Ford and Nissan.

Conflicts between the two camps were one reason production will

New Mazda Sentia: A Pegasus preview?

The Sentia luxury sedan is expected in the United States this fall.

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Mazda Motor Corp. tomorrow will take the wraps off a drop-nosed four-door luxury sedan slated to replace the slow-selling Luce/929 line — but which industry sources say is the precursor to the automaker's long-awaited Pegasus.

The all-new car, the Sentia, will slot in between the Mitsubishi Diamante and the Acura Legend in price, size and luxury trappings. Featuring all-wheel steering and all-wheel drive, the Sentia will be powered by a 2.5-liter, 24-valve V-6 turning out 160 horsepower, and an optional 3.0-liter, 200-hp V-6.

Industry sources said the car, which has been brought to launch stage amid unw[illegible] will be sold in Japan through existing Mazda channels. It is expected to be shown in the United States in late June, when Mazda has scheduled a press briefing for the "all-new 929 replacement." U.S. sales could begin in the fall.

Although Mazda last week refused all comment on the Sentia, one official said it is not the company's much-anticipated Pegasus luxury vehicle. The Pegasus is expected to be sold through a new sales channel in the United States to compete with Honda's Acura, Toyota's Lexus and Nissan's Infiniti nameplates.

But industry insiders here concurred that if the new car is not "the" Pegasus, it is the forerunner of the new luxury line.

Chrysler picks Belvidere to build new small car

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

BELVIDERE, Ill. — Chrysler Corp. will build its new small car for the 1994 model year at its Belvidere assembly plant.

And Chrysler plans to make Big 3 automotive history by building right-hand-drive vehicles for export. An unspecified number of Jeep Cherokees, built at Toledo, Ohio, will be made with right-hand-drive for export beginning in late 1992.

Chairman Lee Iacocca made the announcements Thursday at the company's annual shareholder's meeting, which was held at the Belvidere plant.

The PL cars, which will be in the range between a subcompact and a compact, will replace the L-body Omni/Horizon, which Chrysler dropped last year, and the P-body Shadow/Sundance. The PL is expected to be based on the Dodge Neon concept car.

After the formal meeting, Chrysler President Robert Lutz said Chrysler expects to build 250,000 to 300,000 PLs annually.

Iacocca said the PL project "may just be our last chance to build a quality small car in America at a profit."

The first PLs will be four-door sedans with a 2.0-liter, four-cylinder, multi-valve engine in either single- or double-overhead-cam versions.

The Belvidere plant is now home to Chrysler's full-sized four-door sedans.

Belvidere will be converted to accommodate the PL in the spring of 1993.

In 1992, Chrysler will begin production of the right-hand-drive Cherokee at both Toledo and at Beijing Jeep Corp., Chrysler's joint venture in China.

Iacocca said the right-hand-drive Jeep will plant seeds for future worldwide growth.

"When the first right-hand-drive Cherokee rolls off the Toledo assembly line in late 1992, Chrysler will become the first American car company to mass-produce right-hand-drive vehicles for export out of North America," Iacocca said.

Honda of America Manufacturing Inc. was the first carmaker to mass-produce right-hand-drive vehicles in North America, starting in January 1990. The transplant now builds right-hand-drive Accords for Japan and the United Kingdom.

Ironically, Chrysler's right-hand drive Jeeps will be sold in Japan by Honda dealers.

Former head of Japanese supplier blames Nissan keiretsu for ouster

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — The disgruntled former chairman of a Japanese auto supplier firm last week publicly accused Nissan Motor Co. of using its power under Japan's fabled *keiretsu* system to intimidate and control his company.

American trade negotiators have long cited the *keiretsu* system, a tight network of corporate cross-ownership and control, as a trade barrier that blocks U.S. suppliers from any real participation in the Japanese industry.

Pickens: Dismantle *keiretsus*, Page 14

Under *keiretsu*, groupings of related companies act together in cartel-like fashion to promote mutual business and to influence price and supply. Thus, companies outside the grouping typically are unable to compete for business against *keiretsu* members.

Tesuya Tsukatani, who was dismissed in February as chairman of Ichikoh Industries Ltd., charged that Nissan had engineered his ouster from the company he helped found and used the threat of order cutbacks to force the company to lower prices, resulting in unprofitable margins.

The 71-year-old Tsukatani was voted out by the Ichikoh board after attempting to have his son named president of the company. Ichikoh, Japan's second largest auto-lighting firm, is 20.9 percent owned by Nissan.

Ichikoh's operating profit fell from 3 billion yen (about $21.7 million) in 1988 to an estimated 1.15 billion yen in the just-ended fiscal year. Tsukatani blames the decline on Nissan's ability to pressure the company into accepting lower prices because of the clout it has under *keiretsu*.

Ichikoh also does business with, among others, Toyota Motor Corp. and Daihatsu Motor Co., both of whom own small shares of Ichikoh, as well as General Motors and Chrysler Corp. But Tsukatani said Nissan, its major shareholder and major customer, threatened to take away business if it did not comply.

A Nissan spokesman called the accusations "rubbish," and said the automaker would only be "shooting itself in the foot" if it had actually taken business away from Ichikoh. He added that Ichikoh's profit ratio is not out of line with other automotive companies at this time, manufacturers as well as suppliers.

Nissan also denied Tsukatani's charges that it meddled in Ichikoh's internal affairs by opposing his son's candidacy for president.

"As the largest shareholder, we are entitled to speak our mind" on personnel matters, but "there was no attempt to dictate," a Nissan spokesman said.

Tsukatani has filed criminal charges against Ichikoh, charging the company with falsifying official reports to say that he had voluntarily resigned from office. There are no proceedings against Nissan.

The spat flares up at a time when

BMW positions new 3 series as guilt-free car for '90s

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

WOODCLIFF LAKE, N.J. — With the U.S. launch next month of the 1992 325i, the first completely new 3-series car in 15 years, BMW of North America wants to shed its 1980s "yuppie-car" image and jump on the politically correct '90s bandwagon with a guilt-free BMW.

That means safety, social responsibility and environmental awareness — major themes in the most comprehensive and expensive advertising and marketing campaign in the company's history.

"The market has changed, buying habits have changed, demographics have changed, and we can make statements about our cars that we didn't make before," says Karl Gerlinger, president and chief executive officer of BMW's U.S. sales arm.

But he maintained that the spirit hasn't changed from the cars that inspired the BMW tagline, "The Ultimate Driving Machine."

That tagline is retained, but BMW adds a new slogan that sounds almost defensive: "BMW meets the demands of the '90s with its spirit intact."

The new 325i sedan is the first model in an all-new 3-series lineup, and completes BMW's transition from its old, boxy body style to a new, more aerodynamic, wedgy look.

With the new 3 series the BMW stable shares a strong family resemblance from top to bottom. The latest 7 series was introduced for the 1988 model year; the mid-range 5 series in the 1989 model year; and the 850i coupe for 1991.

Following the 325i sedan — the designation denotes a 3 series car, 2.5-liter displacement engine and "i" for fuel injection — BMW will launch a coupe version of the 325i, probably early next year. The two- and four-door versions of the current 3 series are virtually identical

BRENDA GOETTEMOELLER

Oldsmobile dealer Tom Gill's bulletin board displays clippings that tell how he arranged for 200 tons of supplies to reach troops in the Persian Gulf war.

Bush: Thanks, but no

Dealer who helped war effort can't use president in his ad

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Tom Gill, a Columbus, Ohio, Oldsmobile dealer, says he just wanted to say "thanks."

So he created a television ad featuring White House-supplied film footage of President Bush thanking him for collecting and sending supplies to the Persian Gulf. Gill added his own thanks to the people of central Ohio for donating their time and money.

But the White House told him to cut it out.

"The White House counsel office has stringent guidelines against using the President or his likeness in for-profit advertising," said Paul Luthringer, White House associate director of public affairs.

Gill, owner of Tom Gill Oldsmobile, said he did not know about the White House policy.

The commercial was televised from April 20 to May 10.

"It was a very subtle ad," said Gill. "It didn't show a car or say a thing about selling a car."

The 30-second spot shows troops returning home to flag-waving family and friends. Bush is shown saying: "Look at the strength of Americans across the country. People like Tom Gill of Columbus, Ohio, who collected and delivered eight tractor-trailers full of supplies for the troops in the Persian Gulf."

Gill, who is not seen, says: "Thank you, central Ohio, for making desert relief possible, and thanks to all our troops. It's good to have you home."

The spot closes with the Tom Gill Oldsmobile logo. It never mentions cars.

Bush's remarks were part of a message made for the 1991 National Automobile Dealers Association convention in Atlanta in February, said Luthringer.

Gill said he received two copies of the videotaped message — one from NADA and another from Oldsmobile. He said he was not told that the footage was restricted.

Last fall, Gill enlisted 25 people to help him solicit and package gifts for troops. In a month-long effort, more than 400,000 pounds of goods were collected. Gill said the donations included a variety of things to make the troops' lives more bearable — from books to disposable razors to golf clubs.

Spring brings hint of rebound for truckmakers

By Joseph Bohn
TRUCK EDITOR

The commercial truck market is finally beginning to revive. Some manufacturers, like Paccar Inc. and Volvo GM Heavy Truck, report their first increases in new-vehicle orders for the calendar year in April.

But the trend hasn't been strong enough or long enough yet for them to be wildly enthusiastic.

Freightliner Corp. and Ford Motor Co. have also seen some increases in bidding activity, but no substantial boost in orders yet. Fleet buyers typically get competitive price bids from several manufacturers before buying.

"Indications are that April (orders) will show the first monthly increase over a year ago. But one does not want read too much into it yet," said Frank Prezelski, an analyst with Rothschild Inc. in New York.

He said the industry bottomed out in February and has been slowly improving since then.

Paccar, parent of Kenworth and Peterbilt, is recalling some workers.

Jack McRae, Paccar director of public affairs, said the Peterbilt plant in Denton, Texas, is recalling 150 workers for a planned production increase beginning in June.

McRae declined to give specifics on build rates, planned production increases or specific numbers of people being recalled at other plants. He said the activity at the Peterbilt facilities in Madison, Tenn., and Seattle, and the Kenworth plant in Chillicothe, Ohio, paralleled that of Denton.

McRea said the company's new-vehicle order book was "getting a little strong," but was not near capacity yet. Paccar officials look for a strong second-half rebound.

Volvo GM Heavy Truck's order intake is increasing. "It's starting to look decent for the first time this year," said Rudy Spic, Volvo GM public relations manager.

He said April's orders were "very, very close" to the company's desired goal and early May orders looked good.

Freightliner's orders have been relatively good "all along," said Debra K. Nicholson, director of public affairs. The company has not had any heavy-truck plant shutdowns, she added.

The company hasn't seen any noticeable increase in its order rate during April.

John Merrifield, Ford heavy truck sales and marketing manager, said the company has seen a "little more inquiry" in Class 6-8 orders during the early part of May, but does not expect to see a major upturn until the end of summer.

Ford's Louisville, Ky., plant was down last week. It will shut down for vacation the weeks of June 10 and 17, a little earlier than usual. That will put Ford into a better position for the market upturn later this year, Merrifield said.

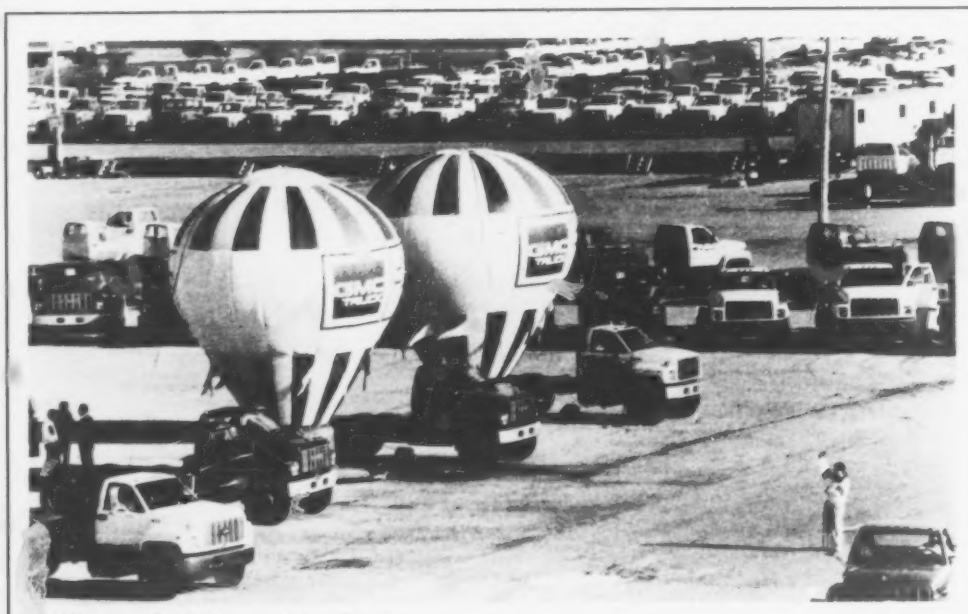
Ford will begin producing 1992 model medium and heavy trucks at Louisville on July 29.

Merrifield said Ford tracks 25 of its key dealers on orders, and they are seeing "some increase in activity."

"I feel better than I did a month ago," he added.

Class 8 sales for April totaled 7,815 and were off 30.6 percent from last year's 11,263, according to the Motor Vehicle Manufacturers Association.

Net new orders for Class 8 trucks during the first three months of calendar 1991, the most recent period available, totaled 19,128, according to Rothschild, off 35.4 percent from 29,627 a year earlier.



Pulling out all the sales stops

General Motors' Truck & Bus Group staged a massive driveaway of medium-duty Chevrolet Kodiak/GMC TopKick trucks from its Janesville, Wis., plant to generate factory orders. About 600 people from dealerships in 45 states attended. It generated 617 orders, filled partly by attendees driving away 196 trucks.

BRIEFS

A U.S. Mid Ranger?

BELLEVUE, Wash. — Paccar Inc. has told dealers it has a team of engineers developing an Americanized version of the Mid Ranger medium-duty cabover truck it is now importing from Brazil.

Jack McRae, Paccar director of public affairs, said Paccar has produced prototypes of the vehicle but hasn't decided where in the United States or when to produce it.

Paccar's Kenworth and Peterbilt dealers like the Volkswagen-designed Mid Ranger, but the Brazilian economic environment makes it unprofitable to import.

Paccar Sales of North America turned over marketing responsibilities for the Mid Ranger to its Kenworth and Peterbilt divisions Feb. 1.

Rockwell gears up

TROY, Mich. — Strong demand for its heavy-truck transmissions led Rockwell International Corp. to increase production at its Laurinburg, N.C., facility.

Dennis A. Kline, Rockwell director of sales and marketing for transmissions, said the firm is adding nine new models of its nine-speed transmission, with R-ratio overdrive and higher torque ratings, to the plant's production.

Rockwell, a newcomer to the heavy-truck transmission segment, expects to garner 10 percent of the market in 1991. It now covers about 70 percent of on-highway applications.

Kline said tighter emissions standards are driving up engine torques and changing traditional engine-transmission match ups.

Fleets are shifting toward "gear fast/run slow" transmission designs for a combination of performance and fuel economy, he added. Overdrive transmissions are also growing in popularity.

ATD opens survey

NASHVILLE, Tenn.— The American Truck Dealers Division of the National Automobile Dealers Association debated whether to publish all the results of its survey of members' attitudes about their franchises.

The issue raised quite a flap among some dealer groups at the organization's annual convention.

The American Truck Dealers Division of McLean, Va., has been publishing only the overall dealer ratings of the value of their franchises. Freightliner Corp. and Mitsubishi Fuso Truck of America Inc. have generally been at the top.

The American Truck Dealers Division decided not to publish other survey information for media use. But Jim Westlake, director of the dealer group, said it will make data from the 13 basic questions of the survey available on a broadscale basis to dealer members upon request.

The American Truck Dealers Division will continue to publish the overall dealer franchise ratings, he added.

DEALERS

FROM PAGE 1

single franchise last year was Ed Morse Chevrolet in Lauderhill, Fla., which delivered 61,936 new Chevrolet and Geo units. The Morse Chevrolet total included 59,694 fleet units and 2,242 retail units.

The previous year, Morse Chevrolet finished second overall, with 37,489 new-unit sales.

Last year Morse traded positions with Jordan Ford of Mishawaka, Ind.

In 1990, Jordan Ford finished second behind Morse, even though the dealership delivered a whopping 52,536 new units.

But in 1989, Jordan was the new-unit volume leader with 42,013 new units.

The Morse dealerships in Florida are all big fleet-sales dealerships, thanks to a centralized fleet operation. Some of the dealerships, like Ed Morse Chevrolet, are dealered by Edward J. "Ted" Morse Jr., while others, like the top-producing Cadillac franchise, Bayview Cadillac in Fort Lauderdale, are dealered by father Edward J. Morse.

Jack Evans, vice president of Ed Morse Fleet Sales, said his company's fleet numbers were boosted in 1990 by the effects of factory turn-back programs.

"The rental companies just rolled their fleets faster and faster last year," he said.

Evans said the Ed Morse Fleet operations — which include big franchises of father and son — have used their own guaranteed turn-back programs for several years as a way to woo daily rental fleet business.

"Actually, the factory programs don't make me happy," Evan said. "They took us out of the turn-back business, which was profitable."

Although Morse Chevrolet and Jordan Ford were well ahead of the pack in new-unit deliveries, neither dealership reported the top dollar-volume sales for their dealerships. That honor went to Prospect Motors in Jackson, Calif., which rang up a staggering $935.3 million in sales last year. That was nearly double the $470.6 million in sales Prospect Motors reported for 1989.

Although Prospect Motors was not the top-producing dealership for any single franchise, it finished in the Top 10 for each of the five General Motors passenger car franchises — including three second-place finishes — for total new-unit sales of 79,073 for those five franchises. Prospect Motors also sells Toyota at its Jackson dealership.

The big-number role of fleet sales was obvious in the *Automotive News* list. The 360 top franchises on the list sold a total of 1,218,569 new cars and trucks last year, 805,783 were fleet sales.

Of the top-producing dealerships for each of the 36 franchises, only 11 had more fleet sales than retail sales. That included all of the domestic franchises, except Jeep-Eagle, plus Mazda.

GM's minority business tops $1 billion again

DETROIT — Donald A. Pais, General Motors vice president in charge of the materials management staff, announced that 1990 marked the fourth consecutive year that GM's purchases from minority suppliers and carriers totaled more than $1 billion.

The cumulative purchases from minority suppliers since the 1968 inception of GM's Minority Supplier Development Program have amounted to $8 billion. Examples of minority purchases include raw materials, engineering and design services, motor carrier transportation, as well as finished parts.

The significance, said Pais, "is not the grand total dollar figure . . . rather, the most important factor is that by encouraging economic equality and working with minority businesses throughout the U.S., these companies are able to provide employment opportunities and increase the participation of other minority-owned firms."

Saturn equals Honda in April sales per dealer

By William R. Diem
ASSISTANT MANAGING EDITOR

Toyota franchises sold more units in April than any other brand, but two cars-only brands, Honda and Saturn, are in a dead heat a neck behind.

By the sales-per-dealer measure, Saturn Corp.'s plan to give relatively few dealers relatively large territories is a huge success. In April, when Saturn was growing from 70 to 100 outlets, it sold cars at the same rate as Honda's 975 dealers: 58 per franchise.

April sales were counted before Saturn announced its latest solution to a quality problem: replacing 1,836 cars with corrupted engine coolant with brand new ones. But there is no sign the recall will hurt Saturn.

> "Toyota's hanging in there. It's unusual to have the incentives, though. We never used to need them."
>
> **Brian Kroll**
> Toyota on Western

In fact, "showing dedication to customer satisfaction . . . has taken a negative and turned it into a positive," said Ray Morrisette, general manager at Saturn of Bloomington, in Bloomington, Minn.

Toyota suffered a 14.0 percent decline in April, about the industry average, and, like the industry, it failed to meet March figures. Chicago dealership Toyota on Western followed that pattern in achieving exactly the average for the marque, 60 units, although the urban store had just one truck in its mix, compared to 18 on average.

"Toyota's hanging in there," said sales manager Brian Kroll, a seven-year employee. "It's unusual to have the incentives, though. We never used to need them." Toyota advertises its dealer incentives on television, proclaiming "up to $1,500" in incentives, which lets customers know how to deal, Kroll said.

Sales-per-dealer figures are an average of total retail sales divided by total franchises.

The rankings closely parallel several studies of dealer attitude toward desirability of franchises. Of the top 10 franchises in April sales-per-dealer, eight are among the 10 most desirable franchises in the winter J.D. Power survey of what dealers would like to sell that they don't have, and seven are among the top 10 in the semi-annual survey by the National Automobile Dealers Association of which franchises are getting more valuable in their owners' eyes.

Sales-per-dealer figures do not necessarily represent a typical dealer. Especially for Big 3 makes heavily into program cars, the biggest dealers are much bigger than typical dealers, skewing the average. At the same time, mature dealer lines, mainly among the Big 3, have many dealers in small towns who sell very few units.

Oldsmobile shows up with an average of 13 sales in April among its 3,095 dealers. "I'm not sure that's a useful number," said John Paul, vice president of Paul Brothers Oldsmobile in Washington, D.C. "The top guy around here is doing 8[illegible]90. The rural dealers might b[illegible] four or five.

"But we've only got about 500 single-point dealers. Most Oldsmobile dealers carry other lines, too. Maybe they sell 13 Oldsmobiles, 15 Pontiacs, and so on."

Paul indicated his store did better than the average, but he also offered some sayings that apply: "If you can't say something postive, don't say anything," and "It's going to get better, or we're going to get used to it."

Special Correspondent Robin-lyn Raimey contributed to this report.

Domestics quadruple use of air bags

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Air bag installations nearly quadrupled for domestic-built cars last year. Air bags were installed on 28.54 percent of domestically produced cars sold in the United States.

Installation of 1,840,489 air bags on 1990 models compares to 487,029 on 1989 models.

Chrysler Corp. put the device in 96.83 percent of its cars; Ford Motor Co. hit 49.95 percent, and GM achieved 14.04 percent, according to a survey of manufacturers completed for the *1991 Automotive News Market Data Book* to be published May 29. Transplants installed none.

Chrysler led the Big 3 in air bags with installations on 653,536 1990 models compared to 144,912 in 1989. Ford installed on 770,305 units, and GM installed 416,647.

Headlight timing devices were the least-installed convenience option measured by the *Automotive News* survey. Only 2.21 percent of domestic-built cars had them installed; all were on GM products.

Complete information on equipment installations for domestic and imported cars and light trucks will be included in the *Electronic 1991 Automotive News Market Data Book* as well as in the printed version, along with dozens of other tables. The electronic version, available in Lotus 1-2-3 worksheet files on 3½- or 5¼-inch diskettes, will cost $200.

The printed *1991 Market Data Book* costs $35 if purchased separately, but is free to *Automotive News* subscribers.

Canadian April sales up 4.8%

By Alex Law
STAFF CORRESPONDENT

TORONTO — Canadian vehicle sales increased 4.8 percent in April, giving the market its first month-to-month sales gain since last July.

A total of 138,539 cars and trucks were sold during the month. Cars sales were up 2.5 percent from April 1990 levels, and truck sales rose 9.8 percent.

The most dramatic gain was posted by Mazda, whose sales doubled. Mazda called the gain its largest ever in Canada and attributed it to heavy advertising, strong internal and external incentives, and an "aggressive" dealer body.

Mazda's 8,868 car and truck sales placed it second among import makes behind Honda. Toyota, whose sales dropped 5.8 percent in April, sold 19 fewer units than Mazda. Mazda is up 56.5 percent for the year.

Among the Big 3, Chrysler led the way with a 12.4 percent increase. General Motors sales rose 1.7 percent, while Ford car and truck sales dropped 10.0 percent.

Other makes with double-digit sales gains included BMW (16.2 percent), Nissan (27.9 percent) and Subaru (49.9 percent).

Importers with the biggest sales declines in April were Jaguar (43.5 percent) and Volvo (25.5 percent).

Industry spokespeople are hoping April's increase might signal the end of the industry slump. Canadian sales dropped 10.9 percent last year and are off 5.5 percent through April 1991. They find hope in falling interest rates, warmer weather and aggressive incentives.

Ford of Canada president bemoans gas-guzzler tax

By Alex Law
STAFF CORRESPONDENT

OAKVILLE, Ontario — The chairman of Ford of Canada says the Ontario government is "kicking the auto industry while it's down" with a plan to double gas-guzzler taxes.

Kenneth Harrigan said last week that Ford will lose 3,100 sales in the 1992 model year if the proposal takes effect as scheduled July 1.

The lost sales will cost Ford approximately $40 million ($34.8 million U.S.) to $50 million ($43.5 million U.S.) in revenues, he said.

Harrigan: sees sales loss

The taxes are intended to promote energy conservation. In addition to the higher levies, the definition of "fuel inefficient" vehicles will broaden to include about 250 models, compared with 57 currently.

Harrigan also told shareholders at Ford of Canada's annual meeting that Ford will spend $56 million ($48.7 million U.S.) to expand the paint facility at its Oakville truck assembly plant. Work will begin soon, and completion is expected in summer 1992.

Ford of Canada lost $73 million ($63.5 million U.S.) in the first quarter of 1991, compared with a $44 million ($38.3 million U.S.) profit in the year-ago period.

Sales dropped 30 percent to $2.4 billion ($2.1 billion U.S.).

Mexican sales up 21% in first quarter

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Mexico's "big five" automakers have added more steam to their hot sales pace of 1990.

The companies sold 146,052 Mexican-made cars and trucks in the first quarter of 1991, a 36.6 percent increase over a year ago. For all of 1990, the top five makers boosted sales 21 percent.

The Mexican market has been aided by price stability, falling interest rates and easier access to credit.

A low-priced version of the Volkswagen Beetle, which sells for about $6,000, has been a hit since its introduction in 1989. It accounted for 15.2 percent of the big five's car and truck volume in the first quarter, with 22,187 sales.

The Beetle helped VW lead the industry. Ford, which a year ago was hampered by a labor dispute at a plant near Mexico City, placed second. Nissan, General Motors and Chrysler were close behind.

In addition, the big five nearly doubled export production for the quarter. Output of vehicles for export totaled 68,575, up 94.8 percent over the first three months of last year.

A big chunk of that increase came from Ford, which early last year produced only a trickle of cars at its Hermosillo plant. In the first three months of 1991, Ford built 18,644 Tracers and Escorts for the United States.

After the Beetle, Nissan's Tsuru (Sentra) was the most popular car in Mexico, with 20,076 sales. Ford's Topaz was third, with 10,660.

In addition to the Mexican-made vehicles, the five automakers sold 3,704 imported vehicles in the quarter. Mexico lifted a ban on imports last year. Ford sold 1,403, including 749 Lincoln Town Cars; GM 1,268, including 598 Corvettes; Nissan 648, including 550 Maximas; Chrysler 332, including 316 Voyager minivans; and VW 53, all Passats.

Aside from the big five's car and light-truck sales, there were 9,574 sales by other makers of trucks, buses and highway tractors.

Rhode Island AAA wins right to broker cars for members

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

A Rhode Island court says the state's American Automobile Association club can act as a new car broker for its members and also can sell off each year a few cars from its fleet as used vehicles.

The court told the state's Motor Vehicle Dealers' License Commission to give the club a dealer's license to do what 17 other such groups also do.

Robert P. Murray, vice president of corporate affairs for the association's South Central New England region, says more than 40 franchised dealers participate in its Auto Referral Service.

After a member chooses the make, model and options, the club writes up the order and adds a prenegotiated profit (somewhere between 3 and 6 percent of the dealer's invoice, depending on whether there is a holdback) for its participating franchised dealers. The member then goes to the dealer to purchase the vehicle.

The Rhode Island car referral business flourished during the 1960s, but was stopped in the early 1970s during the energy crisis because import dealers chose not to participate since they could sell fuel-efficient cars at a premium. The club did continue providing new car pricing data for its members. In early 1990 when the club decided to resume its car referral service, it was told it needed a dealer's license even though it was only referring customers to dealers and not actually selling cars. The club continued its referral service, but temporarily dropped its $75 fee. The club also was told it needed a dealer's license in order to sell between five and 20 vehicles from its own fleet as used cars.

The club then went to the state Motor Vehicle Dealers' License Commission, which is composed of 11 members, seven of whom are new car dealers. Of those seven, six were members of the Rhode Island Dealers Association, which opposed granting a dealer's license to the club. Last August, the commission denied the club's request for a license on grounds it would not be in the "interest of the general public."

The club went to court, saying the commission's decision was unsupported by evidence in the record. Superior Court Judge Paul P. Pederzani, Jr., concurred and disagreed strongly with one of the reasons for the commission's refusal to grant the club a license: a belief that it was responsible "to protect the rights of the dealers" and their economic self-interest. The commission's primary job, said the judge, was "to protect the public from irresponsible and unscrupulous automobile dealers" and in addition, "to prevent unfair practices and competition."

Wis. dealer loses license

MADISON, Wis. — The license of former Chevrolet dealer Robert Fahey has been revoked and Fahey has agreed not to seek a new license for a year in an agreement reached after the state alleged that 24 cars at Fahey's Black Earth dealership were sold in violation of state laws, including its lemon law.

Fahey since has sold the dealership, Suburban Motors, but continues to own two used-car businesses, Suburban Wheels and Suburban III, in Verona, Wis.

The state also suspended the Suburban Wheels license for 10 days after its investigation of seven car sales and suspended the Suburban III license for three days for one car sale.

Phillip Alioto, who supervises field investigations for the Wisconsin Department of Transportation's Dealer Section, said Suburban Motors bought cars that qualified as factory buyback lemons and resold them to customers as factory executive vehicles.

It also sold damaged vehicles as demonstrators or factory executive vehicles without telling buyers about prior damage, he said.

Other violations, he said, included failure to disclose mileage at the time of sale, failure to conduct inspections and to provide the information to customers on used-vehicle disclosure forms, and failure to inform buyers about existing factory warranties or misinforming them about such warranties.

CAMI promises 13 percent rise in N. American content

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

INGERSOLL, Ontario — CAMI Automotive Inc. will increase the North American content of its cars and trucks by about $400 per vehicle during the next year.

That would represent as much as a 13 percent increase in North American value in its vehicles, although company officials will not specify what current content is.

CAMI, a 50-50 partnership between General Motors and Suzuki Motor Co. Ltd., is spending about $500 million a year on North American content. At its current production volume of 160,000 vehicles annually, that represents about $3,125 of North American value per vehicle.

Vehicles like the Metro will have about $400 more North American content.

"We're looking at adding another $400 of North America-made parts per vehicle," said Michael Nylin, CAMI vice president of finance. "We're aggressively seeking new components." The plant manufactures cars and sport-utilities that are shared by GM and Suzuki — the Geo Metro/Suzuki Swift car and the Geo Tracker/Suzuki Sidekick sport-utility.

CAMI has been at odds with the U.S. Treasury Department over the exact North American content of its cars and trucks, most of which are exported to the United States.

The vehicles must meet a 50 percent "North American value-added" level to escape U.S. duty payments under the U.S.-Canada Free Trade Agreement. CAMI contends that it should be allowed to include as content its interest payments on loans used to purchase production machinery. Treasury maintains that the interest payments are not allowable.

"We disagree with them," Nylin said. "So does the Canadian government. It's still unresolved."

Canadian industry sources speculate that CAMI's content rating could fall to as low as 35 percent if the interest payments are not allowed. Nylin said that all of CAMI's reports to the U.S. government have showed the vehicles "exceed 50 percent."

A lower level would require the transplant to use more North American-made components or to force GM and American Suzuki Motor Corp. to pay U.S. import duty (2.5 percent on cars; 25 percent on two-door trucks, including sport-utilities) on the CAMI vehicles they bring into the United States.

At the same time, a move is under way to raise the required North American content level from 50 to 60 percent.

CAMI

FROM PAGE 1

United Motor Manufacturing Inc., yields the Geo Prizm/Toyota Corolla. Saturn produces its own line. CAMI builds the Geo Metro/Suzuki Swift car and the Geo Tracker/Suzuki Sidekick sport-utility.

"We allow only GM people through here," says CAMI's vice president of finance, Michael Nylin, acknowledging the operation's veil of secrecy. "You have to understand that one of the reasons we're even here is for a learning experience for GM."

And learning it is. As far as Japanese transplants in North America go, CAMI's production methods and organization aren't unusual.

But for GM — the carmaker that lost one-fourth of its market to the Japanese during the past decade — the operation is a backyard specimen of a lean, efficient and flexible factory.

Fewer than 20 GM managers work in the plant, alongside 45 to 50 Suzuki managers and trainers. Top management is given to Suzuki, while other operations are handled by the partner with the greatest perceived expertise.

GM handles human resources and finance. Suzuki has provided the plant design, the car models and much of the machinery; it runs the manufacturing and engineering operations and manages the plant's sourcing activity.

CAMI will turn out about 120,000 cars and about 40,000 sport-utilities this year. That's about 40,000 fewer trucks than capacity, a dip brought about by a tumble in Suzuki Sidekick sales in the United States. But the operation gives GM a close-up view of the tricks of a Japanese auto plant.

- Large amounts of componentry are sub-assembled off-line and installed in systems, including instrument panels, engines, axles and suspension systems. The practice reduces the chances for assembly error. Suppliers deliver many subcomponents ready-assembled.
- CAMI runs a flexible assembly line. Front-wheel-drive unibody cars and rear-wheel-drive, body-on-frame trucks roll down the same line, separating for some jobs and reuniting at other points. The plant is really two in one, each modeled after a different Suzuki factory in Japan.
- Industrial engineers are an endangered species at CAMI. The Canadian Auto Workers-represented line workers, or "associates" in CAMI parlance, determine for themselves how they want their work stations laid out and how to perform their jobs. Associates have even taken over the industrial engineer's sacred role of time-motion studies, analyzing for themselves whether their setups are efficient.

"The biggest difference here at CAMI is the freedom the associates have in laying out their work stations," says Eric Stevens, manager of assembly, who came from GM's Lumina plant in Oshawa, Ontario.

- Greater emphasis is also placed on "in-line inspection" than at other plants, Stevens says. Associates, who work in teams, decide for themselves whether a job has been performed adequately. Again, the practice gives workers a greater stake in their jobs and offers more efficient quality control.
- Employee suggestion programs have become the norm for the industry, but at CAMI the program is staggering. Nylin reports that associates came up with 106,000 ideas for improvements last year. That's five to six ideas per employee per month, covering every aspect of vehicle production, from adaptations to hand tools to assembly-line ergonomic improvements.

Even more staggering, Nylin says, CAMI has already begun implementing about 95,000 of the ideas, which could be as simple as moving a table or wrapping a screwdriver handle with tape for better grip. Engineers and line workers are ironing out details on 2,000 others and will end up rejecting about 9,000 as unworkable.

"We're getting more employee participation here than Suzuki does in Japan," Stevens notes. "Frankly, we were a little surprised by the volume of ideas we initially got. We assumed it would taper off pretty quickly. But two years later, it isn't slowing down."

To encourage ideas, a point system rewards workers with cash, merchandise or, for about 10,000 accumulated points, a new car. The first "reward" car will be given away later this month.

One team devised a digital counter that displays the number of "clicks" a wrench makes to ensure that bolts are tightened properly. Another worker devised a holder that keeps suspension knuckles from being bumped onto the floor during installation. Workers built the entire rack system for about $100 in material costs.

Other devices, like an underground lift that raises the vehicle on the line for easier seat installation, aren't so cheap.

"You see why this place is so important to GM," says Nylin. "We're learning all about manufacturing here. Chrysler and Ford aren't getting these new ideas because they've all but written off small-car production in North America."

Sales still search for silver lining

Early May was no help as deliveries plunged 17.8%

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

A second-quarter rebound seems unlikely as early-May sales remained at the recession levels of earlier 1991 periods.

Sales of cars and light trucks for May 1-10 were down 17.8 percent from last year, with domestics taking a bigger hit than imports. April was off 13.5 percent.

The May 1-10 period had nine selling days this year and last.

Ford Motor Co. was off only 12.4 percent; General Motors sales were down 20.9 percent, and Chrysler Corp. was down 32.6 percent. *Automotive News* estimates 10-day sales for Chrysler and for some imports.

Ford's dip of 12.4 percent was an improvement over last month, when Ford's combined shortfall from 1990 was 20.7 percent. Ford said that its April numbers were lower than usual because fleet car sales were temporarily cut back.

Thanks to 1,198 imported Tracers and Capris, Mercury enjoyed a 4.6 percent gain over last year.

At GM, Buick continued to outperform the industry, enjoying a 5.5 percent sales gain, and Saturn reported 1,539 sales, 200 more than in the first 10 days of April.

Among the Japanese-based companies, sales for American Honda Motor Co. Inc. declined 6.4 percent. Honda has cut its imports from Japan and has reduced its U.S. production plans slightly. But Honda's share of the market is rising because other makers are losing even more.

For the 10-day period, Honda claimed 6.3 percent of the market, up from 5.6 percent in 1990. For the first four months of this year, Honda's share was 6.1 percent, up half a point from the year before. In cars only, Honda and Acura sold 256,462 cars from Jan. 1 through May 10, about 12,000 more than Plymouth, Dodge, Chrysler and Eagle combined.

Car and truck sales for Nissan Motor Corp. in U.S.A. were off 5.0 percent in early May, an improvement over Nissan's sales dip of 16.8 percent so far this year. Nissan's U.S.-built Sentras were up 43.9 percent for May 1-10.

Early-May sales for Toyota Motor Sales U.S.A. Inc. were off 16.7 percent, but the decline was greater than Toyota's 11.5 percent dip for the year to date. Trucks were down 9.8 percent and cars were off 19.1 percent in early May.

Mitsubishi gives U.S. parts firms a foot in the door for future cars

Mitsubishi Motors Corp. says it will give U.S. parts makers a chance to participate in the design of its future generation cars, including those built at its U.S. transplant manufacturer, Diamond-Star Motors Corp.

Officials from Mitsubishi and Diamond-Star last week held a conference for 150 North American suppliers — including Japanese companies with U.S. plants — to discuss opportunities for participation in the design.

The firms included existing Diamond-Star suppliers and potential new suppliers to both the transplant and the Japanese manufacturer.

In Japanese industry practices, key component suppliers are selected early in the design process. U.S. firms and the U.S. government have recently put Japanese carmakers under increasing pressure to involve more U.S. suppliers in that stage.

Diamond-Star is a 50-50 joint venture with Chrysler Corp., but negotiations are under way to shift Mitsubishi's ownership to 75 percent. The move would give the Japanese company greater control of product development.

Diamond-Star currently builds two vehicle platforms, the Mitsubishi Eclipse/Plymouth Laser/Eagle Talon and the Mitsubishi Mirage/Eagle Summit. The company will add a third vehicle to the mix in 1993 and also will begin sourcing U.S.-made engines from Chrysler that will be designed by Mitsubishi.

CUSTOMER INCENTIVES

CHRYSLER CORP.
Rebates expire June 30 unless otherwise noted. Finance rates in lieu of rebates are 4.9 percent to 9.9 percent, depending on length of contract. Finance rates on minivans are 7.9 to 10.9 percent.

Chrysler (1991)*	$1,000-1,500
1990	$500-1,000
Dodge Monaco (1991)*	$1,500
Other 1991 cars*	$400-1,000
Monaco (1990)*	$1,500
Other 1990 cars	$700-1,000
Dodge trucks (1991)	$300-1,500
1990 trucks	$500-2,000
Eagle Premier (1991)*	$1,500
Other 1991	$700
Premier (1990)*	$1,500
Other 1990	$700,1000
Jeep	
Grand Wagoneer ('91)**	$1,500
Other 1991	$500-1,000
Grand Wagoneer ('90)**	$1,500
Other 1990	$1,000-2,000
Plymouth (1991)	$400-1,000
1990 models	$700-1,000
All minivans without air bag (1991)	$500
1990 models	$1,500

*Expires Sept. 30 on 1990-91 Monaco and Premier and 1991 LeBaron and Daytona
**Expires Dec. 31 on Grand Wagoneer

FORD MOTOR CO.
Finance rates in lieu of rebates range from 4.8 percent to 7.9 percent. All incentives expire June 4.

Ford cars (1991)	$500-1,500
Cars (1990)	$650-900
Trucks (1991)	$500-1,500
Trucks (1990)	$650-1,150
Mercury (1991)	$500-1,000
Tracer (1990)	$650

GENERAL MOTORS
All makes except Cadillac offer cut-rate financing in lieu of rebates. Unless otherwise noted, rebates expire June 2 on 1990 models and July 7 on 1991 models.

Buick (1990-91)†	$250-2,000
Cadillac Brougham (1991)	$1,500
Chevrolet	
S Blazer (1991)	$1,500**

4x4 pickups (1989-91)	$200-1,000

VOLKSWAGEN (1990, no expiration date)

Cars	$500-1,500

NISSAN

FROM PAGE 1

begin about six months later than originally planned, said Jerry Hirshberg, vice president of Nissan Design International. But Hirshberg said he was surprised there weren't more disagreements along the way. It's hard enough, he said, harmonizing the interests of Nissan engineers and cultures in two countries. It's even tougher when two unrelated companies are involved.

Hirshberg said a shared vision for the project and a joint commitment to keep costs down kept it focused. After Ford and Nissan executives originally agreed on the concept, Hirshberg's team "told both sides to get the hell out. And for months, they did."

The order: Create a high-quality minivan with more creature comforts than the competition and with ride and handling qualities that will please people who like to drive.

With that common goal, everything came into focus at the design stage, said Hirshberg. Nissan decided not to go with a "one-box" design — such as that used on the stylistic Toyota Previa. Although it had aerodynamic advantages, it was deemed hard to heat and cool and added unnecessary interior volume.

"We decided it would be superfluous to go after styling for its own sake," Hirshberg said.

Nissan ended up with a compromise between the one-box design and the more conventional two-box. In shape, the Quest/Villager ironically enough mimics the Mazda MPV, a rear-drive minivan. Ford decided not to work with Mazda on the minivan project because Ford wanted the vehicle to be front-wheel drive. Its own Aerostar is rear-wheel drive.

If there were a van version of Nissan's Maxima, Hirshberg added, this would be it.

Under the hood, it will carry a Nissan 3.0-liter V-6 engine with four-speed automatic transmission; basically it is the Maxima's powertrain. Inside the seven-passenger vehicle are lots of cup holders and seat backs that can serve as table tops. Passengers in the middle two-person bench seat can adjust the sound system.

KGP PHOTOGRAPHY

The nose bra on a Villager in this spy photograph disguises the downward slope of the hood from windshield to headlights.

The rear bench seat folds up and slides against the middle seat to create cargo space in the back. For more storage room, the middle seat can be removed, allowing the rear seat to slide directly behind the front seats. The idea, Hirshberg said, came from women who said they didn't want to remove the rear seat every time they hauled groceries instead of kids.

When Ford executives were allowed a look at the design team's work, they greeted it with a "chorus of smiles," said Hirshberg. Remarkably, he said, the shape changed little after the final clay model.

Development was expedited by the fact that there are relatively minor differences between the Ford and Nissan versions. A light bar, like that on the Mercury Sable, will grace the front of the Villager but not the Quest. And there will be some differences inside. But a shared desire to control costs kept both companies from spending money just to shape sheet metal, Hirshberg said.

Nissan revealed few specifications. To some press observers, the Quest appeared smaller than the segment-leading Chrysler minivans. Nissan answered by saying that the dimensions are similar — even to the longer versions of the Chrysler models.

Engines will initially come from Japan. But six months after Job 1, the powertrains will be built at a new Nissan plant in Tennessee. That change will push North American content above 75 percent. Nissan's manufacturing plant in Tennessee will stamp the sheet metal, which will be shipped to Ohio. Jigs and tooling used at the Ford plant will be brought from Japan.

Some components were subcontracted through Ford.

By working with Ford, Nissan "learned better how to deal with American suppliers" and closely coordinate engineering work with them, said an executive with Nissan CR Corp., the platform group working with Ford. He said the experience is already paying off with new American suppliers for Smyrna, Tenn., where Nissan builds Sentras and pickup trucks.

With U.S.-Japan trade friction increasing, Japanese automakers are under pressure to use more U.S. suppliers.

Ford itself may become one of them. Ford engineers designed the instrument panel and air conditioning systems for the Villager-Quest, and press reports last week said Ford may supply Nissan with air conditioning and other systems.

SENTIA

FROM PAGE 1

According to one industry executive who has been briefed on the Sentia, Mazda is launching the new car as a "test case" for Pegasus while it finishes developing a new 4.0-liter V-8 engine. Mazda will not launch the Pegasus line until the V-8 is ready, probably inside two years, the source said.

Steve Usher, who follows the industry for Kleinwort Benson International in Tokyo, said Sentia could be a "practice run for the Pegasus," much like Nissan's wide-bodied Cima anticipated the Infiniti. But he expects Mazda to take a step-by-step entry into the luxury market, waiting to get comfortable with the Sentia before proceeding further.

The new car will be the largest Mazda ever built. At 197 inches long, 71.8 inches wide and 55.2 high, it is 3 inches longer and 4 inches wider than the Luce/929. Because of all-wheel steering, turning radius is an unusually tight 16.1 feet — narrower than the Legend's 17.5 feet and almost as good as the subcompact Mazda Familia/323, at 15.8 feet.

The front end slopes to a particularly low angle, allowing for an expansive front windshield.

Sentia's competition in Japan

- **Sentia, $20,289 to about $33,000**
- **Mitsubishi Diamante, $14,490 to $28,980**
- **Acura Legend, $26,810 to $39,130**

The new model is fitted with an optional solar sunroof which recharges the battery when the car is parked in the sun during the winter time and which turns on ventilation when parked in hot summer sun.

Other features spied last week on a car in the locked back room of a Tokyo dealership included driver-side air bag, cruise control, power seats, deluxe audio and leather interior.

According to a Mazda source, Sentia now becomes the company's top-of-the-line model while the Luce is phased out. The Luce will be dropped to allow the company to concentrate its resources on the Sentia, the new MX-3 and the new RX-7 expected to debut at the Tokyo auto show this fall, the source said.

Analysts, none of whom had been briefed on the new car, said it addressed Mazda's need to move more aggressively into the upper end of the market, even if that segment is starting to decline.

"Mazda has decided they have to get into that segment," said Neal Doying of Baring Securities in Tokyo. "Their success before has been in small cars. They have not performed well in the large-car segment" with the Luce.

According to Usher, the Sentia should mean higher profit margins for Mazda — "which could help offset what could otherwise be a difficult year."

The Luce/929, which was last remodeled in 1986, has not sold well since its debut. Japan market sales in the just-ended fiscal year fell 26 percent from a year earlier, to about 23,139.

On a calendar-year basis, worldwide exports fell 11.6 percent in 1990, to 23,756 units. U.S. sales fell to 16,535 last year from 19,390 in 1989, when sales were off 25 percent from 1988.

Car analysts talk trends at gathering

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — You didn't need a whiff of ocean air to know the Society of Automotive Analysts was meeting in California. You just listened to the principal subjects: clean air, traffic congestion, trends and a touch of Big 3 bashing.

The biggest brickbats were thrown by Richard Recchia, executive vice president and chief operating officer of Mitsubishi Motor Sales of America Inc.

"Just like in 1981 . . . we're witnessing another round of political posturing by the Big 3 as they try to convince U.S. government officials that during the past 10 years they haven't had enough time to get 'breathing space' nor to establish a 'level playing field,' " Recchia said in his speech at the closing session.

Recchia: tosses brickbats at Big 3

Calling it the start of another "red herring cycle" in automotive politics, Recchia said Detroit keeps changing the rules of the game: "They said, 'If you're going to sell 'em here, build 'em here.' So we did and now we're getting criticized for that."

Recchia took issue with the different definitions Big 3 executives use in talking about products.

He questioned the fairness of calling the Eagle Talon and Plymouth Laser "domestic," and therefore good, while the nearly identical Mitsubishi Eclipse, built in the same U.S. assembly plant, is called a "transplant, and that's bad."

He said the Big 3 call their Mexican- and Canadian-built products "neo-domestic," when they are actually imports.

The audience received Recchia well, and many laughed when he joked that the Big 3 were holding a fund-raising event, selling pieces of turf from the infamous "level playing field" for $25. The laughter served as a reminder that Los Angeles loves imports, among other things.

There was almost constant reference to clean air, fuel economy, traffic congestion and other issues with particular relevance in Southern California.

Panels tackled globalization, design, advertising, environmental, [illegible] and technology issues.

Some key remarks included:

- William Young, president and chief executive officer of Volkswagen of America Inc., told the crowd that the current franchise system and its focus on price, not value and image, "will not be tolerated indefinitely by consumers."

He suggested the need to direct efforts away from rebates and gimmicks and into providing better products and better information to consumers.

- Bernard Campbell, principal of DRI/McGraw Hill, said that "manufacturers are investing too much into fuel efficiency." He forecast that corporate average fuel economy standards will not change drastically and that the low price of fuel keeps consumers from being too concerned with fuel efficiency.

"The industry can legitimately cry poverty this year," and that will keep Congress from doing anything too drastic with CAFE, he said.

- Bob Shull, senior marketing analyst, car division, American Honda Motor Co., admitted that not having a minivan "is a major gap in our product line." But he said that since Honda does not now build trucks, the decision would require a major commitment that Honda has not yet decided it wants to make.

- Al Flowers, senior designer and assistant to the vice president at Nissan Design International, showed that supporters of the Gobi (a sporty, quirky pickup the design group made as a concept vehicle for 1990 auto shows) never say die. Flowers said he's "still hoping" the project will someday see production.

U.S. builds 2-millionth car of 1991

By Bob DeMayer
SPECIAL CORRESPONDENT

U.S. car and car and truck output increased last week, and car production surpassed two million for the year last Monday.

Last year, the two-millionth car was built 11 days earlier.

Estimated assembly of 129,678 cars last week was 13.33 percent above the prior week but 9.89 percent below the year-ago week.

Year-to-date, U.S. car production of 2,079,520 trails 1990 by 11.48 percent.

Estimated truck production last week was 78,744, up 12.23 percent from the previous week but down 20.32 percent from the 1990 week.

So far this year, 1,192,378 trucks have been assembled, 23.34 percent below last year.

General Motors built the last Buick Reatta at the Reatta Craft Centre in Lansing, Mich., last Tuesday. Total output since production began in 1987 was 21,712. The highest yearly build was 8,245 in 1988. The plant is scheduled to be retooled for the production of electric cars.

GM scheduled Saturday overtime last week at the Lordstown, Ohio; Arlington, Texas; Fairfax, Kan.; Oklahoma City; and Linden, N.J., car plants. GM also scheduled one shift of Saturday overtime for the Moraine, Ohio, postal line and two shifts of Saturday overtime at the Baltimore truck facility.

Ford Motor Co. slated Saturday overtime last week at the Louisville, Ky., truck plant. The Edison, N.J., and Wayne, Mich., truck plants remain on a single shift this week.

Chrysler's St. Louis (No. 2) truck plant worked Saturday overtime on two shifts.

CANADA: All plants in Canada were closed last Friday and are closed today in observance of Victoria Day.

Canadian car production was estimated at 23,308 last week, down 14.44 percent from the prior week but up 8.62 percent from the year-ago week.

Year-to-date, 406,337 cars have been produced, putting 1991's total 1.20 percent above 1990.

Truck production last week was estimated at 16,726, down 17.84 percent from the prior week and 7.63 percent below the year-ago week.

Year-to-date, truck production in Canada is 14.21 percent below 1990.

Lutz: '93 LH draws bead on Japanese, Euro sedans

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Despite a $3 billion cost-cutting campaign, Chrysler Corp. is expanding its lineup of LH sedans bowing in the 1993 model year and will give Chrysler brand dealers mid-sized and full-sized versions of the all-new vehicle.

Chrysler disclosed last week that in the fall of 1992, Eagle, Dodge and Chrysler brands will retail different mid-sized versions of the LH. Six months later Chrysler dealers will receive a distinctly styled full-sized version of the car.

Chrysler targets options, Page 3

Previously, Chrysler had indicated that LH models would be introduced in only the Dodge and Eagle divisions at the start of the 1993 model year with a single Chrysler brand vehicle bowing midway through the model year.

The LH sedans, which ride on Chrysler's first new car platform since 1980, are critical to the company's quest to regain a strong presence in the U.S. car market.

The models also will be the first cars that exemplify a product strategy Chrysler President Robert A. Lutz has touted with almost missionary zeal. The company maintains the LH sedans carry cutting-edge design, meet or exceed world-class standards in everything from powertrain performance to the feel of interior switches and will compete with the likes of the vaunted Acura Legend.

POPULAR MECHANICS/JIM DUNNE

The 1993 mid-sized cars from Chrysler Corp, codenamed LH, feature what the industry calls a "cab forward design" — the windshield is steeply raked forward over a portion of the engine compartment, creating a striking silhouette and a larger interior area.

The cars also are seen by Chrysler as an example of what the company can do on its own — despite worldwide speculation that it needs an international partner such as Mitsubishi Motors Corp. to help it survive the 1990s.

The LH sedans ride on a 113-inch wheelbase. The mid-sized models are 200 inches in overall length while the full-sized version reaches 207 inches. In comparison, the mid-sized Ford Taurus sedan has a 106-inch wheelbase and is 188.4 inches in length. The full-

AUTOMOTIVE NEWS/JOE WILSSENS

"None of us can recall an American car that was designed so completely to be outside of what American cars normally are," says Robert Lutz.

Mazda 929 replacement

Mazda Motor Corp. last week unveiled this curvaceous sedan as its replacement for the square-edged 929. The all-new, rear-wheel-drive car, called the Sentia in Japan, will retain the 929 label in the U.S. market, where it is expected to go on sale in September. Longer, wider, taller and heavier than its predecessor, the new car will slot between the Mitsubishi Diamante and the Acura Legend in both dimensions and price.

CSI will become base for BMW dealer bonus

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — BMW of North America Inc. will discontinue paying bonuses to dealers who meet sales goals. Instead, it will base payouts to dealers on customer satisfaction and market penetration.

In a related move, BMW also is scrapping its two-year-old "dealer-based" ordering system. The program was supposed to enable dealers to custom-order their inventories, but it never really lived up to its billing (see story on Page 28).

Details of the new bonus structure and new dealer ordering system haven't been determined. Both changes take effect next year.

BMW's move to bonuses for customer satisfaction comes as newcomers such as Lexus and Infiniti are trying to outdo each other in pleasing the customer. Infiniti paid 38 dealers $25,000 each for their customer-satisfaction performances during the first quarter.

The old BMW bonus structure paid dealers a percentage of the dealer cost of each car, usually 1 percent, if they met their sales goals. A dealer who met a quota of 300 cars a year, which is good-sized by BMW standards, received a bonus of about $90,000, said James J. Ryan, executive vice president of automotive operations.

BMW's pursuit of greater customer satisfaction will depend, in turn, on the company improving its sometimes touchy relationship with dealers.

Dealers ranked BMW near the bottom in last year's J.D. Power Dealer Satisfaction Survey, in which dealers express their pleasure or displeasure with their franchises. That helps explain BMW's 10th-place finish in the 1990 J.D. Power Customer Satisfaction Index, well behind Acura, Honda and Mercedes-Benz.

The change in strategy marks the latest in a series of moves by Karl Gerlinger, BMW president and chief executive officer. He took over in August 1989 and almost immediately cut prices. The

COMING SOON: *Powertrains, safety are focus of changes for '92 model year*

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

For 1992, automobile companies will unveil new models packed with technology, plus improvements in the powertrain and safety features of existing vehicles.

More powerful — and simultaneously more fuel-efficient — engines and transmissions are on the way. Lower-cost models are being fitted with traction control, anti-lock brakes and air bags. Some companies will add convertibles.

Much of the 1992 model information comes from a 47-page booklet prepared by LMV Leasing Inc. of Pittsburgh. The booklet is used by fleet operators and administrators in selecting vehicles. More than 200 car, van and light-truck models are mentioned.

In addition, *Automotive News* talked to engineers and product planners to fill in this portrait of the 1992 models.

Ford

Ford Motor Co. will offer new features and new models. The Korean-built Festiva will get a sports package with larger, alloy wheels and suspension tweaks.

A gently restyled Tempo and Topaz will be fitted with a standard 2.3-liter, four-cylinder engine with sequential multi-point fuel injection. Ford will try to pump extra life into the aging compacts with the addition of the optional 3.0-liter V-6, currently used in Taurus and Probe.

Taurus and Sable will receive significant redesign of the headlights, front and rear fascia and interior.

A Ford chassis engineer says air springs may be slated for the rear suspension. Other improvements include a roller-tappet-equipped version of the 3.0-liter V-6.

Late in the model year, Thunderbird and Cougar will get a version of Ford's modular 4.6-liter V-8, replacing the current 5.0-liter V-8

Mid-May sales match weak 1990; cars show gain, but trucks slide

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Light-vehicle sales in mid-May were about even with last year. The performance was good by 1991 standards, but the year-ago period was an exceptionally bad one, so it wasn't a very high benchmark to meet.

The combined total for cars and light trucks was 346,146, down 0.1 percent. *Automotive News* estimates 10-day sales for Chrysler Corp. and most imports.

Tom Webb, chief economist for the National Automobile Dealers Association, called the industry's performance "a refreshing break," providing "hope that a recovery is under way."

But he said the industry shouldn't expect sales to get much higher until the overall economy

GM Canada surrenders Passport:
For 1992, GM Canada will drop its Passport international Automobiles line and add Geo to its Chevrolet-Oldsmobile outlets. Page 2.

Fiat to acquire 30% of Soviet maker VAZ

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Fiat S.p.A., the big Italian industrial and automaking group, said last week it had tentatively agreed to acquire a 30 percent equity stake in Volzhsky Motor Works, or VAZ, the Soviet Union's biggest automaker and producer of the Lada family of vehicles.

If completed, the accord would give Fiat a shareholder's voice in the Soviet auto industry, a first for a Western company.

At the same time, however, Fiat said the Soviet Union's deepening financial crisis had forced it and Moscow to shelve another proposal to build a $7 billion complex to produce 900,000 cars a year at Elabuga, near Kazan in east Russia.

Cancellation of the project would mark a severe blow to Moscow's goal of increasing its car production by two-thirds by the end of the decade, to around 2 million units a year.

But a Fiat spokesman stressed last week that the huge greenfield project was being "rescheduled," not "canceled."

"Elabuga is not abandoned," the spokesman said. "The Russians prefer to accelerate the first step of 300,000, and do not

Honda earnings plunge 47% for quarter

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Honda Motor Co. said late last week that sluggish sales in the key U.S. market and currency-exchange losses caused by a stronger yen contributed to a 47 percent drop in net income for the fourth fiscal quarter ended March 31 and a 6.6 percent decline in full-year earnings.

Separately, Mazda Motor Corp. and Mitsubishi Motors Corp. reported Friday that their full-year net income increased. Mazda's rose 1.6 percent and Mitsubishi's jumped 24.5 percent.

Honda said consolidated net income for the fourth quarter fell to 14 billion yen ($100 million) from a year earlier despite a 3.8 percent increase in sales, to 1.14 trillion yen ($8.1 billion). Operating income plunged 48.1 percent to 26 billion yen ($185 million), reflecting the higher cost of sales, it said.

For the year, Honda said net income fell to 76.2 billion yen ($541 million) despite an 11.6 percent gain in revenue, to 4.3 trillion yen ($30.5 billion). Operating income fell 26.8 percent, to 146.8 billion yen ($1.04 billion) because of slow U.S. sales, the increased cost of sales and rising depreciation expenses from the company's heavy plant investment in recent years.

For the same fiscal year, Mazda said net income rose to 27 billion yen ($191.6 million) from a year earlier on an 8.8 percent rise in sales, to a record 2.22 trillion yen (about $15.8 billion.)

Mitsubishi said its unconsolidated net income jumped to 25.2 billion yen ($181.2 million) on a 14.2 percent increase in sales, to 2.3 trillion yen ($16.5 billion). It said operating profit rose 35 percent to 85.8 billion yen ($613 million), reflecting the company's strong home market showing.

Koji Endo, who follows the industry for Nomura Securities in Tokyo, likened Honda's current financial difficulties to "a slight fever" that time will take care of.

Honda's investment in a second plant in Ohio as well as a new line and a new plant in Japan "was the right thing to do," Endo said.

But it may take Honda longer to recoup the investment than they originally expected, he said.

Neal Doying, auto analyst with Baring Securities in Tokyo, said Honda's depreciation costs should peak at this point and the company could see "some increase in consolidated profit if demand in the United States picks up."

Honda itself is forecasting flat growth in net income for the current fiscal year, citing what it calls "the high level of expenses, especially selling expenses" in a very competitive market.

Although both Mitsubishi and Mazda reported growth for the last fiscal year, analysts predict tougher times in the current fiscal year, in part because of an expected down-turn in the domestic truck market.

GM of Canada axes Passport name, adds Geo

By Alex Law
STAFF CORRESPONDENT

General Motors of Canada will start the 1992 model year by getting rid of its four-year-old Passport International Automobiles line and adding Geo.

The changes, effective Sept. 1, will see the current chain of about 70 Passport points become Saturn-Saab-Isuzu Truck stores. Chevrolet-Oldsmobile dealers, one of GM Canada's two principal dealer bodies, also will take on Geo. There will be no structural change to the Pontiac-Buick-GM dealer group, and Cadillac franchises will still be awarded to worthy dealers from either Chevrolet-Geo-Oldsmobile or Buick-Pontiac-GMC.

According to Michael Erdman, GM of Canada's vice president of marketing, the restructuring will clarify the market positions of the dealer networks. By dropping the Passport name in favor of Saturn-Saab-Isuzu, dealer bodies will be identified by the products they sell.

GM of Canada created Passport in 1987 to appeal to import buyers. The line carried vehicles built by GM's overseas affiliates, such as Saab and the Isuzu Trooper. It was also scheduled to carry Saturn when the new line makes its Canadian debut in the 1992 model year.

Unlike the United States, Canada has not had a Geo franchise, which was created for U.S. Chevrolet dealers in 1989, while Erdman was the division's general marketing manager.

Some of the products sold in the United States as Geos, such as the Metro, have been sold in Canada through Passport or as Chevrolet and Pontiac models.

"We have had some outstanding product offerings in these small-car market segments," Erdman says, "but we have lost ground to the imports over the last several years."

Under the new program, such cars as the Daewoo Optima will move from Passport to Pontiac. Its name will change to LeMans, as it is known in the United States. Pontiac Tempest, basically a rebadged Chevrolet Corsica, will be dropped for the 1992 model year.

The new Geo line will carry the Metro (formerly Pontiac Firefly and Chevrolet Sprint), Storm (formerly Passport's Impulse) and Tracker.

Geo won't offer the Prizm in Canada, as it does in the United States.

Although Pontiac-Buick-GMC dealers will lose their lowest-priced model, the Firefly, they will get the LeMans and a version of the Impulse/Geo Storm.

They also will get an upscale sport-utility this fall from the Suzuki-GM joint venture plant in Ingersoll, Ontario. Erdman says that vehicle will be a variation of the existing Tracker.

One reason for the change is the approach of free market parity between Canada and the United States in 1995. By aligning Canadian products more closely with those in the United States, GM will be making things easier for dealers and their customers when the last border restrictions fall.

GM of Canada also has acknowledged that by using different names for some products in Canada, the company is sending conflicting messages about products that are advertised under different names through U.S. media.

As Erdman says, GM of Canada will no longer have to get awareness of its unique brands "by throwing money at marketing."

When it comes to brand identification, Erdman is particularly anxious that the Saturn name be front and center somewhere. He says Canada will get the full line of Saturn, and there are no plans to move them to a second network.

CHANGES AT GM-CANADA

For 1992:	Was:
Saturn-Saab-Isuzu Trucks	Passport International Automobiles
Chevrolet-Geo-Oldsmobile	Chevrolet-Oldsmobile
Pontiac LeMans	(Passport) Daewoo Optima
Saturn	Not sold before
Geo Storm	(Passport) Isuzu Impulse
Geo Metro	Pontiac Firefly/Chevrolet Sprint
Geo Tracker	Chevrolet Tracker
New Pontiac sport-utility	GMC Tracker

Correction

The table showing April truck sales by gross vehicle weight in the May 20 issue contained four incorrect 1991 year-to-date totals. The correct totals are: Peterbilt, 2,997; Isuzu, 3,388; Mitsubishi Fuso, 1,088; and Western Star, 232.

Texas shoots for GM ad scandal

Volvo-exposing officials dispute Baldrige quality award claims

By Raymond Serafin and Jennifer Lawrence
CRAIN NEWS SERVICE

AUSTIN, Texas — The Texas attorney general is threatening to sue General Motors for alleged deceptive advertising in a corporate campaign that touts Cadillac's 1990 Malcolm Baldrige National Quality Award for manufacturing.

Representatives of the attorney general and automaker are scheduled to meet this week to try to reach agreement on a consent judgment.

According to a formal notice of intent to sue filed by the attorney general, there are six unsubstantiated claims that violate the Texas Deceptive Trade Practices Act. Those included listing the number of applicants for the award as 167,000 and stating that the Department of Commerce had praised Cadillac's 4.9-liter engine and its customer relations center.

A GM spokesman said the company erred and already had corrected advertising regarding the number of Baldrige Award applicants, but said GM's position was that otherwise the advertising was "accurate and not misleading."

The advertising in question was created by McCann-Erickson Worldwide in New York, as part of the corporate "Putting quality on the road" effort.

Last October, the Texas attorney general created another automotive advertising flap when it charged Volvo Cars of North America with deceptive advertising for ads that depicted a Volvo 240 station wagon surviving a run-in with a "monster truck" while competitive makes were crushed.

Volvo was forced to admit that its car had been specially reinforced and the structures of the competitive makes weakened. The automaker publicly apologized. Its agency, Scali, McCabe, Sloves Inc. of New York, resigned the account.

1992 to bring world car sales relief, DRI predicts

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

BRUSSELS, Belgium — Worldwide passenger-car sales will fall 3.3 percent in 1991, the steepest decline since 1980, according to DRI Europe in its latest *World Automotive Forecast Report*.

But demand — fueled by recovery in the world's key economies — will turn sharply higher in 1992 and will grow more than 3 percent a year through 1995, the London-based research organization says.

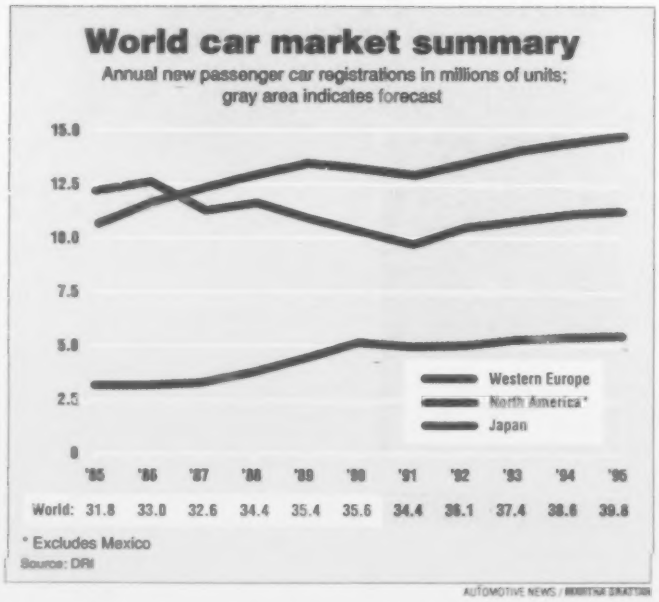
"We are still not expecting a prolonged downturn in global car sales," the DRI study says.

DRI says its forecast is based on an assumption of a worldwide economic upturn next year.

"The depression that has dominated the world economic scene during 1990 is expected to lift toward the end of 1991" because of a recovery in business and consumer confidence, the firm says.

DRI projects global sales of 34,428,000 cars in 1991, down from last year's record of 35,615,000. But it says world demand will recover to a record 37,379,000 by 1993.

"As the U.S. economy starts to pull itself out of the doldrums and Western Europe is boosted by a resurgence of activity in those major economies that have been in or close to recession . . . it is good news for world demand as a whole," the report notes.



AUTOMOTIVE NEWS / MARTHA GRATTAN

Projected car sales for 1991 include 9,644,000 in the United States and Canada, a drop of 7 percent from 1990; 12,901,000 in Western Europe, a dip of 2.2 percent, and 2,148,000 million in the Asia-Pacific region, up 4.7 percent.

For next year, DRI forecasts an 8.8 percent jump in sales in the United States and Canada, to 10,488,000 units. U.S. demand will rise to 9,430,000 from 8,704,000, it says, while Canadian sales will increase from 940,000 to 1,058,000.

"By midyear, we expect there to be a glimmer of an upturn in the (U.S.) sales statistics, which should be confirmed by the end of 1991," the report says. "The bottom line, however, is that car sales will almost definitely fall below 9 million this year."

DRI says it expects U.S. light-truck sales to mirror the passenger-car trend. It foresees light-truck sales falling about 8 percent this year, to 4,216,000, followed by a 10.8 percent rise in 1992, to 4,671,000.

DRI's prediction of a 2.2 percent drop in European sales is somewhat more optimistic than other forecasts.

"The saving grace of the West European market as a whole this year is the German market, and both west and eastern Germany are providing a substantial boost to total demand," DRI says.

DRI is sticking by its forecast of 4.9 million sales in Japan in 1991, a decline of 3.2 percent from last year, but it predicts an increase to 5.1 million in 1992 and growth averaging 4 percent annually in the next few years.

Prospects for growth in Latin America (including Mexico) "are as uncertain and yet as promising as ever," says DRI.

During 1991, the group forecasts that demand in Brazil, Mexico and Argentina will increase 2.8 percent over 1990, and it projects higher rates of growth through the middle of the decade.

Meanwhile, Sanjay Dabysing, head of DRI Europe's Automotive Group, cautions that a glut of new car-building capacity could act as a drag on industry profitability later in the decade.

He says 6.3 million units of new capacity costing some $27.3 billion are scheduled to come on stream worldwide by 1995 — far outstripping a projected increase of 4.2 million units in demand, to 39.8 million.

Of the 46 separate projects, 19 will be in Eastern and Western Europe, adding more than 3.3 million cars to existing capacity, he said. Another 18 projects accounting for 1.7 million units will be in Asia, he said.

In the United States and Canada, nine projects will be started and completed by 1995, adding 1.3 million cars, he said.

"Despite plant closures in North America, the region still has an overcapacity problem," said Dabysing. "Western Europe does not have an overcapacity problem, even with a sharp downturn in demand in 1991."

NADA subcommittee to monitor regulations

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Rising concern over federal regulation of the automobile industry has prompted the National Automobile Dealers Association to form a regulatory affairs subcommittee.

"There are a lot of automotive-related issues, so the new subcommittee will provide direct input on them to the NADA staff," said M.R. McIlwain, 1991 NADA government relations chairman.

"The new subcommittee will inform the government relations committee of the state of regulatory matters," he said.

McIlwain, who owns McIlwain Cadillac-Suzuki in Metairie, La., said NADA is involved in 65 federal regulatory proceedings with at least nine federal agencies. Last year, NADA filed 27 written statements with federal agencies and testified at numerous hearings.

"The feeling is that NADA should have more input into the regulatory process," said McIlwain.

"We felt it was vitally important to look at how the regulators interpret legislation as well as the legislation itself."

The issues the subcommittee will address include implementation provisions for the luxury-car tax by the Internal Revenue Service, rules by the EPA to implement the Clean Air Act, new regulations affecting disposal of used oil and recycling old batteries, and the IRS' reporting regulations for cash payments made by customers.

James J. Reilly, NADA director from Colorado and vice chairman of the government relations committee, will serve as chairman of the subcommittee.

The addition of the regulatory affairs subcommittee brings to three the number of subcommittees reporting to NADA's government relations committee.

Other subcommittees include tax, trade and campaign finance; and commerce, judiciary and labor.

Automotive News is No. 1 in magazine competition

NEW YORK — *Automotive News* has been named the nation's top transportation trade magazine in the annual MagazineWeek Publishing Excellence Awards.

Automotive News bested four other finalists, including publications covering the automotive, aviation and boating industries. The competition included 43 trade and consumer magazine categories.

The awards are based on a "publication's ability to distinguish itself by maintaining the highest standards in the definition, recognition and achievement of editorial mission," said *MagazineWeek*. Entries included each magazine's mission statement.

Time Inc. magazines won four top awards. Crain Communications, which publishes *Automotive News*, also won with *Advertising Age* in the marketing communications trade magazine category. Crain Communications joined six other companies, including the New York Times Magazine Group, with two winners each. Crain's *AutoWeek* was a finalist in the consumer news category, which was won by *Sports Illustrated*.

The 1991 ordering system focuses on Jeep Cherokee (top left), Dodge Shadow (top right), Plymouth Sundance (left) and Eagle Talon. The system extends to the full line for 1992.

Chrysler targets options to move '92s

By Joseph Bohn
TRUCK EDITOR

Chrysler Corp. will target select "high-velocity" cars and trucks as a major focal point of its marketing plan for 1992 models, according to Ronald Boltz, Chrysler vice president of product strategy and regulatory affairs and general manager of small-car operations.

Chrysler has been evolving its high-velocity, or "customer-preferred ordering system," for several years and will extend it to all cars and trucks this fall.

It tracks the quickest-selling color/equipment combinations on a model-by-model, zone-by-zone basis, said John MacDonald, Chrysler Corp. general sales manager. The corporation has 25 sales zones.

Chrysler will extend the use of special discounts to induce dealers to stock the faster-moving combinations.

It is the same concept used nationally for Dodge Shadow/Plymouth Sundance in 1991.

In 1990, Chrysler Corp. had a standard 15 percent discount on equipment packages ordered on those cars. It now uses variable discounts, with a maximum of 50 percent on the most popular package combinations.

MacDonald said 39 of 103 recommended equipment packages account for 85 percent of orders for Jeep Cherokee, Dodge Shadow, Plymouth Sundance and Eagle Talon, which are the current focus of the program.

Officials also are interested in using the program to reduce product complexity.

For dealers, a key component of the program is the expansion of a computerized inventory management system that gives them immediate feedback on all their inventory on a daily basis.

The software was developed by Chrysler and is transmitted by its satellite network to dealers' computers. Dealers call up the information by punching in a code. It gives them daily updates on selling rates and equipment combinations in inventory.

John Reit, sales manager for Van Dyke Dodge in Warren, Mich., said some dealers aren't paying attention to the program, though he finds it beneficial.

Reit said some Dakota packages, for example, can "save you $2,700. If you don't pay attention and order something similar, you can pay more money with less equipment. And that's a vehicle that will sit."

Reit said he likes the velocity program and the inventory management system.

"You want to pull up the velocity reports on the package cars and pull the velocity reports on color selection before you order anything," he said. "It's time-consuming, but it forces you to sit down and take the time to order intelligently."

Tom Oliver, sales manager for Lyles Jeep-Eagle in High Point, N.C., said the system gives him an objective viewpoint of what to order because "sometimes it's hard for me to order something I don't like or wouldn't be seen driving." He cited the two-door, five-speed Cherokee Laredo with all the options.

"Some dealers will not order it, but we've done well with it," he said. "People tend to order cars on their personal preferences. They forget that everybody in the world doesn't have their ideas, concerns and reasons for owning a car."

He said as a result of the inventory system, he no longer has cars "sitting for months on end."

Dealers seek better Ford warranty

Council wants 3-year minimum for parity with GM and imports

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Warranty coverage will be a key issue this year as Ford Division's 4,500 dealers try to gain competitive advantage in the crowded U.S. market.

The 27 members of the Ford Dealer Council met Ross Roberts, the new Ford Division general manager, last week. The three-day meeting "was not contentious but certainly no lovefest either," said a council member who did not want to be identified.

The council presented Ford with a number of issues that were worked out by six committees that report to the larger group. One of the more detailed reports came from the parts and service committee. Its recommendations included a proposal for a three-year/36,000-mile bumper-to-bumper warranty with no deductible on all 1992 models.

Ford Motor Co. now offers a one-year/12,000-mile warranty with a $50 deductible on all Ford and Mercury products. Lincolns have a four-year/50,000-mile warranty and no deductible.

By contrast, General Motors and the large Japanese and European makers all offer at least three-year/36,000-mile coverage, and most of those warranties require no deductibles.

GM requires a $100 deductible on all makes except Cadillac and Saturn. Chrysler Corp. cars have a 12-month/12,000-mile warranty and a $100 deductible, except for large luxury cars and the Town & Country minivan, which have five-year/50,000-mile coverage and no deductible.

Ford dealers say their warranty coverage lags behind industry standards.

"We can't compete with the Hondas and Toyotas of the world" with the current warranties, said a council member who did not want to be identified. "If Ford is sincere about quality, it should have warranties to back it up."

Ford spokesman Mike Moran said customers can buy extended warranty coverage, and the company "depends on those extended programs" to give buyers the added protection they need.

Dealer Council Chairman Mike Shad of Mike Shad Ford in Jacksonville, Fla., said council members were impressed with Roberts, who replaced Thomas Wagner May 10. Roberts had been general manager of Lincoln-Mercury Division.

"Roberts believes in regional marketing," Shad said.

"The advantages of regional marketing are that people in Boston are not looking for the same types of cars and deals as people in Texas," he added.

Shad said most of Ford Division's marketing plans are national, not regional. He said Wagner wants to implement more regional plans but because of a lackluster economy, his main objective is to keep the plants open.

Ford Division executives also were presented with a warranty-cost study conducted by the National Automobile Dealers Association, but it was "nothing conclusive," said a council member who wished to remain anonymous. Dealers say Ford's 30 percent warranty and parts markup reimbursement is too low; Ford says the reimbursement level is fair and reasonable.

Another contentious issue is Ford Motor Credit Co.'s tiered financing plan, which requires less-creditworthy customers to pay a higher interest rate than more-desirable customers.

Rural and minority dealers say the tiered financing system hurts their businesses because many of their customers do not meet the same standards as customers who shop in rich, suburban areas.

Council members say they are impressed with Ford's 1992 product lineup, and they say they're satisfied that the company is not cutting product-plan budgets.

"They're cutting costs in other areas, but the reports show there will be no product program slippage," said a council member.

Direct financing cuts into dealer income

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Banks are chipping away at dealers' finance income by persuading customers to obtain direct loans rather than allowing auto dealers to arrange financing, according to the 1991 Automobile Finance Study conducted by the Consumer Bankers Association.

Direct loans originate with lending institutions; indirect loans originate with dealers, who then sell the paper to financial institutions like General Motors Acceptance Corp. or Ford Motor Credit Co. The trend toward direct loans reflects banking's move to sell more services to existing customers rather than acquiring new customers.

The National Automobile Dealers Association says the trend toward direct loans is a way for banks to obtain a better grade of credit customers.

According to NADA, the average finance and insurance fee for a new vehicle sold rose to $299 in 1990 from $284 in 1989, so the trend toward direct loans could be costly to dealers.

> "The trend toward direct financing means banks are pulling away from doing business with the dealer body."
>
> **Jake Kelderman**
> NADA

"This is an example of cherry-picking loans," said Jake Kelderman, executive director of industry affairs for NADA. "The trend toward direct financing means banks are pulling away from doing business with the dealer body."

Bankers say auto dealers send better-quality loans to captive finance companies. Hence, with the nation in a recession, direct loans give the banks more control over the credit quality of customers.

"The banks are taking a much tougher line and saying we want quality paper (loans)," said S.A. Ibrahim, senior vice president at New York-based Chemical Bank. "From a credit standpoint, the captive finance companies have siphoned off the better paper."

Auto lending remains the largest category of consumer installment credit with $285 billion in total car loans outstanding in 1990, a slight decrease from $289 billion in 1989.

The number of auto loans financed through captive finance companies declined last year, while the number financed through banks and other lending institutions increased, according to the study. Commercial banks in 1990 rose to $126 billion in auto loans, resulting in a 44 percent share of total auto loans — a scant 1 percent increase over 1989.

Timothy R. Hinkin, assistant professor of commerce at the McIntire School of Commerce at the University of Virginia, said captive finance companies such as GMAC and Ford Credit placed more emphasis on leasing in 1990 than on auto loans.

Hinkin was the principal researcher on the report.

Ibrahim said another reason for the decline in loans by captive finance companies is that they offered fewer low-interest-rate loan incentives last year.

"The success of the captives in consumer loans was driven by the number of special programs they offered," he said. "They have been far less aggressive recently in offering 2 to 3 percent financing on vehicles. Their rates are closer to market rates."

The direct-loan approval rate in 1990 was 61 percent, the same as in 1989, while the indirect-loan approval rate fell to 47 percent from 51 percent in 1989. For leases, the approval rate remained at 58 percent in 1990. The average new-car loan in 1990 was $13,294, up from $11,447 in 1989.

The average capital cost of a lease dipped to $17,603 in 1990 from $17,643 in 1989. The reason for the decline in capital cost, according to Hinkin, is the increasing volume of leases for lower-priced vehicles.

The number of direct consumer loans that have soured has risen, according to the Consumer Bankers Association.

In addition, the number of delinquent captive finance loans has risen.

While leasing delinquencies remained relatively stable in 1990, the number of repossessions increased. More customers are in dire financial trouble and are voluntarily turning in their vehicles, said Hinkin.

Nissan Motor claims battery breakthrough

One of the major stumbling blocks to a practical electric vehicle is the lengthy recharging period.

But Nissan Motor Co. Ltd., in a joint venture with Japan Storage Battery Co., has announced a breakthrough that would make recharging possible in one-fifth the time required by conventional electric-car battery systems.

Nissan calls it the Super Quick Charge battery system for both nickel-cadmium and lead-acid batteries.

One of the keys to the quick-charge battery system is its ability to dissipate heat quickly.

— Jack Keebler

FROM PAGE 1

improves. The government last week reported that orders for durable goods rose 2.9 percent in April, which economists considered an encouraging sign.

Car sales improved 3.0 percent to 225,442 in mid-May. Truck sales were down 5.5 percent to 120,703. There were eight selling days in the mid-May period each year.

General Motors posted an increase of 3.4 percent on total deliveries of 130,481 cars and trucks, but that was in comparison to last year when GM's sales were down 30 percent from 1989.

As an example, Buick's 14,811 sales were up 60.2 percent over last year. But Buick was down 43.6 percent in the year-ago period, so Buick's sales in mid-May 1991 were still 9.7 percent below those of two years ago.

Pontiac also reported a sales increase for mid-May, up 1.2 percent.

GM's car sales this year were up 13.4 percent over 1990, but its truck sales were down 12.3 percent. Car sales outnumbered truck sales 2-to-1 at GM.

A 45.6 percent increase in Mercury sales helped Ford Motor Co.'s overall sales rise 1.6 percent, but Ford was down last year, too.

Both domestic and imported cars contributed to Mercury's 1991 upturn. U.S.-built cars jumped 29.3 percent, to 9,765, and Mercury dealers sold 1,515 imports compared to only 194 last year.

At Chrysler Corp., where light-duty trucks and minivans outnumbered cars, sales were down 13.0 percent to 38,369.

Sales for the biggest Japanese-based company, Toyota Motor Sales U.S.A. Inc., declined 4.5 percent to 23,725.

Sales of American Honda Motor Co. Inc.'s Acura line rose 8.4 percent, and its Honda models were up 9.5 percent.

European sales show first gain since July '90

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — European car sales rose in April for the first year-to-year increase since last July, but industry analysts said they are not convinced that Europe has pulled out of its slump.

Sales increased 9 percent over a year earlier, to 1,299,600 units, according to industry estimates compiled by *Automotive News*.

That pulled the total market for the first four months fractionally above the same period in 1990. Sales through April totaled 4,920,900, some 15,000 units above the first four months of 1990.

The April figures reflected the continuing strength of the German market and signs of life in France, Italy, Spain and Sweden, although sales in the United Kingdom remained woefully depressed.

The German market continued to drive all of Europe, with April sales rising 56.1 percent, to 432,400. For the first third of the year, German sales surged 47.4 percent ahead of 1990.

The figures include eastern Germany, which was not included in year-ago totals. Still, when an estimated 150,000 sales in eastern Germany are excluded, German sales are running about 33 percent above last year's.

In France, April sales of 190,400 cars were about the same as in 1990, although four-month sales were off 16 percent. In Italy, according to official registration figures, sales fell 3.2 percent in April, to 212,400. The April tally compared with year-to-year declines of 4.5 percent in March and 6.4 percent in February.

The news also was comparatively better in Spain, where sales declined just 10 percent, to 79,500, in April, although they were down 19.7 percent for four months. And the Swedish market dipped only 6.5 percent in April, to 20,600 units, against the backdrop of a 29.1 percent slide for the four months through April.

But sales in the United Kingdom slid 24.2 percent, to 126,600, last month, making the four-month decline 22.2 percent.

"The U.K. very clearly is in a severe slump," said Sanjay Dabysing, director of DRI Europe's Automotive Group. "We expect a mild upturn in the U.K. in the second half — but not very much."

DRI has downgraded its 1991 sales forecast for the British market to 1.7 million, down 15 percent from 1990. Some analysts and industry executives have projected that the market will slide as low as 1.5 million.

"France, we believe, is merely pausing for breath," said Dabysing. "Italy was not really affected by the Gulf crisis. The market has been quite resilient."

Overall, DRI Europe expects new-car sales in Europe to fall 2.2 percent this year from the 1990 record of 13.41 million. On a directly comparable basis — excluding sales in the former East Germany — DRI projects a 4.3 percent decline.

EUROPEAN SALES

Manufacturer	4 months, 1991	1991 share	4 months, 1990	Volume change (%) '91 vs. '90

Others	41,900	0.9	46,100	− 9.1
Total	**4,920,900**	**100.0**	**4,905,700**	**+ 0.3**

1-Includes Alfa Romeo, Lancia
2-Opel, Vauxhall; GM-U.S., Canada; Isuzu; not Saab
3-Includes Jaguar
4-Peugeot, Citroen, Talbot

John Lawson of Nomura Research Institute in London was not overwhelmed by the April figures.

"Some people think every time they see a swallow, it is spring," he said. "But one has to be careful. The first quarter was unusually depressed in Europe, so it is probably not surprising that you may get the odd month where things look a little better."

He added: "I'm not suddenly going to change my forecast. It is a sign that some of the worst may be over, but no sign that a recovery is just around the corner. There is no reason to believe it will not be a down year."

Lawson projects a downturn of 5 percent this year, including sales in eastern Germany.

In April, the Volkswagen Group was still atop the European sales charts, posting a 17.3 percent increase in sales, to 220,700 units. For four months, VW group sales, including VW, Audi and Seat, were up 10.7 percent for a 16.6 percent market share.

Indeed, sales for five of Europe's six volume manufacturers increased during April. The Fiat Group was off 7.2 percent, to 162,800. But Fiat, which includes Alfa Romeo and Lancia, remained No. 2 in Europe.

General Motors also has benefited from the strong German market, where it ranks second behind VW. In April, combined Opel and Vauxhall sales improved 21.2 percent, to 159,100, the biggest gain among the six volume producers.

Opel's sales in Germany rose 68 percent, to 80,400 units, last month. GM has therefore boosted its share in Europe's largest market by nearly two points, to almost 19 percent, in an overall market that expanded nearly 50 percent through April.

Meanwhile, combined Japanese sales continue to outpace the European market, with an increase of 5.6 percent for the year and penetration of 11.4 percent. Japanese makes took 12.6 percent of the market in April on a 13.1 percent increase in sales, to 164,300 units.

But long supply lines are still making it difficult for Japan's automakers to keep pace with rapid growth in Germany. Despite holding 15 percent of the market for several years, Japan's carmakers captured only 12.5 percent of booming German sales for January-April.

Japanese suppliers in U.S. face trouble, says consultant

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Despite their fast growth in the United States, many of Japan's transplant suppliers are disappointed with profits and volume and may have to change their business strategies to survive here.

As much as 80 percent of the mushrooming Japanese transplant supplier community may be disappointed by business in America, according to a business consultant who recently completed a study of the group.

A full one-fifth of the approximately 350 transplant suppliers here are "running some serious risk of failing and are troubled about what to do to correct it," claims Glenn Mercer, an associate with the international business consulting firm McKinsey & Co. Inc.

McKinsey has just published a report on the transplant suppliers' business outlook, "Focusing on a Single Core Customer: An Outdated Strategy for JTOS." JTOS refers to Japanese-owned suppliers to the transplant original equipment manufacturers.

Mercer looked at 20 firms specifically for the report. But he said he drew on his consulting experience to reach conclusions about the entire group.

"A good 80 percent of the group is not doing great and is confused about it," said Mercer, citing information collected for the report.

"The remaining 20 percent is doing great and loving it," he said.

The most common problems include a failure to obtain additional business in the United States and difficulties sourcing materials and subcomponents to Japanese specifications from local suppliers. Companies that are faring the best are those with broader customer and product bases, and those in the United States long enough to establish ties with the Big 3.

Similar findings have been reported by other researchers.

A recent report by Japan's Ministry of International Trade and Industry found that profit margins for the transplant suppliers are far below their standards in Japan. Automotive suppliers in Japan average a 2 percent return on sales, MITI reported. But the same suppliers are averaging a margin of only 0.7 percent on their U.S. operations, MITI found.

> "A good 80 percent of the group is not doing great and is confused about it. The remaining 20 percent is doing great and loving it."
>
> **Glenn Mercer**
> McKinsey & Co. Inc.

Mercer said the problem is most acute for suppliers who set up shop in this market to supply only one Japanese transplant automaker. Japan's controversial *keiretsu* system — a practice that allows cross-ownership and control of customers and suppliers — has unwisely brought many Japanese suppliers into the American market, he contends.

"It's difficult for a supplier, especially a small one, to make money on a single customer that has a limited product line," Mercer said. "In Japan, the supplier has the customer's entire line to supply, including the carmaker's higher-margin vehicles. In the United States, the supplier has to make it on the OE's very limited, usually low-priced product line.

"It's a dangerous position to be in. It gives the customer the power to exert pressure on the supplier's prices. It also removes the supplier from the loop of new product design, since most of the component design is still being done in Japan. That increases the possibility that the transplant supplier's product will become obsolete," he said.

The McKinsey report concludes that the transplant suppliers will have to further penetrate the U.S. original equipment market to stay alive. Mercer concedes that strategy will be hard to implement.

The Big 3 are reducing the number of suppliers they use, and General Motors and Ford Motor Co. both have signaled that they will not enter into new supplier relations.

Ford has even given the UAW new power in qualifying suppliers. That could mean non-union suppliers may be among the first eliminated as the supplier ranks are thinned. Few of the 350 transplant suppliers are unionized.

VW and Sterling offer incentives to clear the lots of 1991 models

Volkswagen of America Inc. and Sterling Motor Cars continue to clear out their 1991 models with summer incentive programs.

Sterling is offering a special finance program on select 1991 models through July 31.

Customers may purchase either the 827Si or 827SL for nothing down and $459 to $508 a month; 10 percent down and $404 to $457 a month; or 20 percent down and $359 to $406 a month.

The finance plan is available on contracts of 24 months and 36 months.

Customers who choose to lease an 827Si or 827SL can pay nothing down and make monthly payments of $369 to $499 for 24 to 36 months, or they can make a down payment of 10 percent and pay $292 to $399 a month for 24 to 36 months.

Through June 30, Volkswagen is paying its dealers $500 on sales of 1991 Jetta (except diesel) and Golf (except GTI and Wolfsburg limited edition) models, depending on the number of cars sold.

Dealers who reach their sales quotas will receive payments retroactive to the first car sold.

Volkswagen continues to pay dealers $500 to $1,500 for sales of 1990 cars. That program has no expiration date.

BMW

FROM PAGE 1

dealer-based ordering system was instituted on his watch, though BMW had started talking about it before Gerlinger arrived.

More recently, Gerlinger has been insisting that dealers upgrade their facilities — some of them 20 years old — to make a better impression on customers.

That has estranged some smaller, dualed dealers in older facilities. They feel BMW is trying to get rid of them in favor of bigger dealers in major markets with facilities that measure up to BMW's "corporate identity" requirements.

That controversy could continue when BMW starts basing bonuses in part on customer satisfaction. Adherence to BMW's corporate "look" is among the criteria the importer uses to judge customer satisfaction, so bonuses will be at least partly tied to uniform appearance. BMW hasn't decided how high dealers will have to score on the customer satisfaction scale in order to get a bonus.

At its national dealer meeting in Scottsdale, Ariz., this month, BMW addressed many of the areas that dealers have been unhappy with, said dealer Lee Maas of Classic BMW, who has stores in Dallas and Phoenix.

Several dealers have commented in the past that it's not so much what BMW says that angers them, but the way the company says it. BMW officials have acknowledged the need to communicate better with dealers.

"They are very sensitive to that (poor dealer satisfaction score), and they seem to be doing something about it," said Maas.

"The policies they are putting in place seem to be aimed in the right direction. We'll have to see what they actually do."

The main order of business at the national dealer meeting was to introduce the new 325i, the initial model in the first all-new 3 series in 15 years.

The friction between BMW and some of its dealers has developed in a time of shrinking sales.

Healthy 3-series sales could make dealers forget some of their complaints, but don't count on it, said John Jaffe of BMW of Fairfax (Va.), chairman of the BMW dealer council.

"Even if the entire dealer body was profitable, dealers would still strongly resent the intrusion of BMW into the way we do business day-to-day," Jaffe said.

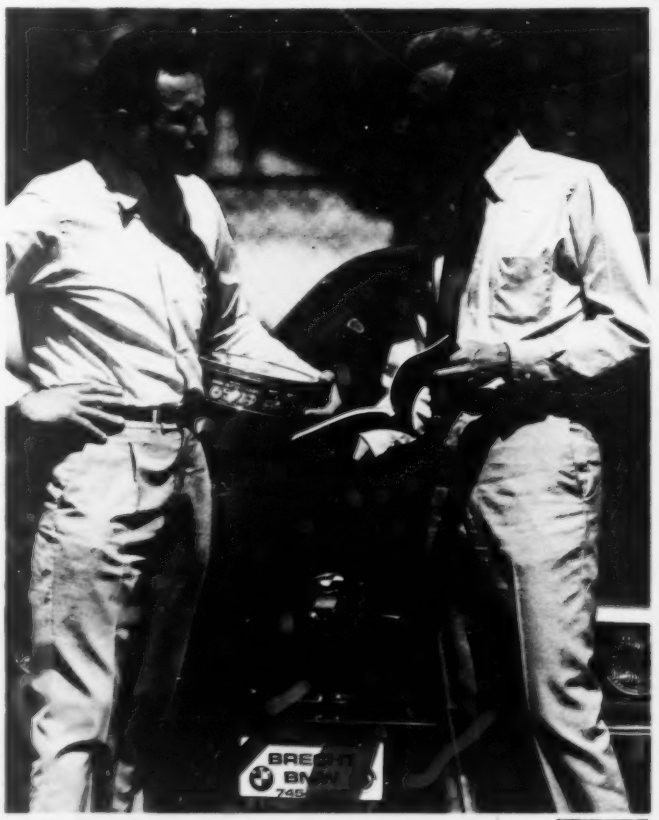
The company's sales were down 23.7 percent, to 15,496, through April after falling 1.9 percent in all of 1990, to 63,646 cars. The new luxury tax that has depressed sales since it took effect Jan. 1 artificially boosted sales late last year. In 1986, BMW sold a record 96,759 cars in the United States.

Without mentioning a timetable, BMW has said its long-term U.S. sales goal is 85,000 a year.

In addition to customer satisfaction, the new BMW bonuses will be based on market penetration of a geographic area assigned to each dealer.

BMW has not begun divvying up territories to determine market-share goals. That process could cause some controversy in major markets with multiple dealers.

Under the new ordering system, dealers will still be able to special-order cars, but most cars will be chosen from the model mix and options BMW chooses to build, which dealers and BMW officials said is more like the way the system has operated all along.



STEPHEN WHALEY

Nick Lambesis, left, picks up his new BMW 735 from salesman Craig Donavan at Brecht BMW in Escondido, Calif. Dealer Bill Brecht likes BMW's new program of basing dealer bonuses on customer satisfaction ratings.

Custom-order system fades away at BMW

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

BMW of North America Inc.'s dealer-ordering setup, the so-called Sales Planning System, took effect last year in response to dealers who complained that they couldn't get the cars they wanted.

Along with the rest of the industry, BMW also hoped to cut its car inventories. Although BMW says the plan was successful in that respect, the system will be dropped at the end of this year.

The fundamental flaw was that it was impossible to predict with precision 12 or 18 months in advance how many cars of what type each dealer would need.

The plan was supposed to work like this:

Dealers estimated what cars they would need for the next year. BMW took those numbers as a starting point and negotiated a target with each dealer. Production in Germany theoretically would be based on those dealer orders.

As an incentive, dealers who achieved their sales targets received a cash bonus, which usually was 1 percent of the dealer cost of each car sold.

But the system foundered on some hard realities.

First, accurate estimates were hard to make, especially in a poor sales climate. BMW solicited dealer predictions for 1990 while the system was still in the planning stages, and the trial-run estimates added up to 95,000 cars.

"Thank God we didn't start building 95,000 cars," said James J. Ryan, executive vice president of automotive operations.

BMW "negotiated" with its dealers a 1990 projection of 65,000, and the dealers sold 63,646 cars that year. BMW officials said that shows the system produced an accurate projection. But it also shows that BMW had the last word in the "dealer-based" ordering system.

Second, BMW's production facilities in Germany were too inflexible and too far away to allow dealers to change their orders without long delays.

BMW spokesman Thomas O. McGurn said Europeans don't mind waiting for a car if they can special-order it to the nth degree. But Americans want their cars immediately, and they're more willing to compromise on features if it means less delay, he said.

Besides those fundamental difficulties, the bonus system put a premium on volume, and that had some unintended effects on distribution, Ryan said.

For instance, dealers who were close to making their bonus target might take cars they didn't really need. As a result, some dealers who really needed cars couldn't get them.

BMW tinkered with the bonus to solve that problem. In 1990, the bonus was 1 percent if dealers met their volume goal and no bonus at all if they fell short.

The system was changed for 1991, but problems continue. This year, dealers who make 90 percent of their goal get a bonus of 0.5 percent bonus; 100 percent of the goal earns 1 percent; and 120 percent of the goal earns 1.5 percent.

Bill Brecht, the owner of Brecht BMW in Escondido, Calif., said dealers had been worried that BMW would scrap the bonus system in midyear and dealers would miss out on their year-end bonus.

Brecht has the kind of showcase store BMW likes to see, a three-year-old, multi-story dealership on about two acres. He said he never made it into the top ranks of BMW's customer satisfaction surveys until he built his new facility.

"I am absolutely in favor of it," he said of bonuses based on customer satisfaction.

Europeans lose 20% to luxury tax

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Demand for European cars over $30,000 has permanently dropped 20 percent because of the luxury tax, but high-line Japanese cars appear to be immune to the levy, according to a new study.

The study was commissioned by the Federation Against Inequitable and Regressive Taxation, a group of auto, fur and jewelry interests fighting the tax. The report was done by the consulting firm Temple, Barker & Sloane Inc.

The firm based its conclusions on data gathered from the automakers. It attempted to factor out such influences as the recession and the surge in sales last December, when buyers rushed to beat the Jan. 1 tax, said John B. Schnapp, vice president of Temple, Barker & Sloane.

The tax also appears to have given a competitive advantage to the Lexus LS400 and Infiniti Q45. Schnapp said such cars appear to be less affected because they cost about $40,000, where the luxury tax amounts to $1,000 (10 percent of the value over $30,000), or 2.5 percent of the purchase price. The average European luxury car sells for $54,000, where the luxury tax is $2,400 or 4.4 percent of the purchase price.

Sales of European high-line cars plummeted 37 percent through April, the study said. The overall U.S. car market dropped nearly 17 percent.

Based on the projected decline in demand, European dealers stand to lose 24,316 sales during 1991. At a weighted average price of $54,000 per vehicle, this represented $1.31 billion in lost retail sales for high-line dealerships, the study said.

The study also concluded:

- The luxury tax will result in a loss of at least 3,320 jobs, or 8 percent of total high-line dealership employment.
- Because of the lower sales, the government will lose revenues: $22.5 million in customs duties, $26 million in federal income tax, $22[illegible] million in gas guzzler taxes, and $64.5 million in states sales tax, based on an average rate of 5.4 percent.

The study also predicted that the number of unprofitable luxury car dealers going out of business would double in 1991 compared with last year.

Mitsubishi to double imports of U.S. parts

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Mitsubishi Motors Corp. says it will double its imports of U.S. parts and materials by 1995.

Hisao Okamoto, corporate general manager of purchasing, indicated the company could purchase about $340 million annually in U.S. material and components within four years. That compares with $170 million from the United States last year, out of a Mitsubishi total of $400 million.

Mitsubishi's announcement appears to be in response to the worsening auto-parts trade imbalance between the United States and Japan and growing tension over the issue.

A study released this month by the University of Michigan predicted that the current U.S. parts-trade deficit with Japan of $10.5 billion annually will reach $22 billion a year by 1994.

Mitsubishi and its U.S. transplant, Diamond-Star Motors Corp. in Normal, Ill., held a conference for about 150 supplier firms earlier this month to discuss the "design-in" phase of vehicle development.

In Japanese auto development, design-in is the process through which suppliers actually participate in the vehicle's development, which virtually guarantees their inclusion as a component supplier. The U.S. government has been pressuring Japanese automakers to open the design-in practice to U.S. firms to allow them more access to Japanese supply contracts.

Mitsubishi officials told suppliers it is crucial for them to get involved in Mitsubishi's vehicle design as early as 36 months prior to production.

Output tops 4 million in U.S., Canada

By Bob DeMayer
SPECIAL CORRESPONDENT

Total car and truck production in the United States and Canada surpassed four million units for the year last Monday. In 1990, the four-million mark was reached nearly three weeks earlier.

Estimated assembly of 107,479 cars in the United States last week was 16.52 percent below the prior week and 18.96 percent below the year-ago week.

Year-to-date, U.S. car production of 2,186,071 trails 1990 by 12.24 percent.

Estimated truck production last week was 80,296, down 0.15 percent from the previous week and down 8.06 percent from 1990.

So far this year, 1,274,348 trucks have been assembled, 22.67 percent below last year.

All plants in the United States are closed today in observance of Memorial Day.

Ford Motor Co. slated daily overtime this week at the Louisville, Ky., truck plant. The Ford Explorer, Ford Ranger and Mazda Navajo are produced there. The Edison, N.J., truck plant remains on a single shift this week due to a shortage of dealer orders. The plant builds the Ford Ranger.

Chrysler closed its St. Louis (No. 1) plant indefinitely last Friday. The plant built its last Dodge Daytona May 23.

Chrysler scheduled no overtime this week.

CANADA: Canadian car production was estimated at 23,919 last week, 9.41 percent more than the prior week and 54.33 percent more than the year-ago week.

Year-to-date, 431,642 cars have been produced, putting 1991's total 2.26 percent above 1990.

Truck production last week was estimated at 17,553, up 8.42 percent from the prior week and 4.71 percent above the year-ago week.

Year-to-date, truck production in Canada is down 13.71 percent.

General Motors scheduled two shifts of overtime last Saturday at its Oshawa, Ontario, truck plant. It builds the Chevrolet full-sized pickup and GMC Sierra.

Ford has scheduled daily overtime this week at its St. Thomas, Ontario, car plant.

SCHEDULED PLANT CLOSINGS

Plant	Weeks down	Units lost/ week
FORD		
Wayne, Mich.	**5/27**	
Ford Escort		5,000
GENERAL MOTORS		
Detroit/Hamtramck, Mich.	**5/27**	
Buick Riviera		*
Cadillac Eldorado		
Cadillac Seville		
Olds. Toronado		
Lansing, Mich. (A plant)	**5/27**	**
Buick Skylark		
Oldsmobile Calais		
Lansing, Mich. (B plant)	**5/27**	*
Pontiac Grand Am		
CHRYSLER		
Windsor, Ontario (Pillette Rd.)	**5/27**	
Dodge Ram Van		1,150
Dodge Ram Wagon		700
Sterling Heights, Mich.	**5/27, 6/3**

SALES/REGISTRATIONS

New-car registrations in the United States for 1990 dropped to its lowest level since 1983. The year's total new-car registrations of 9,159,629 was 692,988 units less than 1989's total of 9,852,617, a 7 percent decrease for the one year.

Registrations of U.S.-built cars in 1990 slumped to 5,673,963, a 10.95 percent decrease from 1989's total of 6,371,833.

Import-car registrations gained back ground lost in 1989 when they experienced a 170,434 unit drop from the previous year. For 1990, import-car registrations increased by 4,882 and imports captured 38.05 percent of the year's total U.S.-car market.

In 1990, the Big 3 captive imports' share of new-car registrations slipped by 5,607 units, or 1.60 percent.

Other imports declined by 10,489 units, or 0.34 percent, to 3,141,532 in 1990.

SPECIFICATIONS

1991 model passenger-car specifications

New-car and light-duty truck specifications are compiled by Automotive News from information supplied by automakers, car divisions, vehicle importers, the Motor Vehicle Manufacturers Association and other sources. Base models are listed. Upgraded-trim versions without changes in engines or dimensions are not listed.

Engine classifications are: I — inline; V — V-shaped block; H — horizontally opposed; R — rotary.

Transmission classifications are: M — manual; A — automatic.

Drive system classifications are: F — front-wheel drive; R — rear-wheel drive; 4 — four-wheel drive.

New-car dimensions and capacities are explained at the top of the chart. Every reasonable precaution has been taken to insure accuracy, but Automotive News cannot assume any liability by reason of inaccuracies or omissions. Specifications are subject to change without notice.

PRICES

Retail prices, 1991 cars, domestic and imported

This table shows the prices of 1991 domestic and imported cars as of May 1, 1991. All prices are manufacturers' suggested retail prices. Imported-car prices include ocean freight and U.S. import duty. None of the prices include destination charges, state and local taxes, optional equipment or the 10 percent U.S. luxury tax on transactions over $30,000.

In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned and "Pkg." means the item is part of an option package and is not priced separately.

PRICES

Retail prices, 1991 pickup trucks, domestic and imported

This table shows the prices of domestic and imported light trucks as of May 1, 1991. Prices are manufacturers' suggested retail prices. Imported-light truck prices include ocean freight and U.S. import duty. None of the vehicle prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the retail buyer. Prices are for the base vehicle with the base engine. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned and "Pkg." means the item is part of an option package and is not priced separately.

Retail prices, 1991 sport-utilities, domestic and imported

This table shows the prices of domestic and imported sport-utilities as of May 1, 1991. Prices are manufacturers' suggested retail prices. Imported-sport-utility prices include ocean freight and U.S. import duty. None of the vehicle prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the retail buyer. Prices are for the base vehicle with the base engine. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned and "Pkg." means the item is part of an option package and is not priced separately.

PRODUCT PROFILES

The following pages contain profiles of the world's vehicle makers and the products they sell in the United States.

The information was compiled from financial reviews, manufacturers' reports and the pages of *Automotive News*. Photos and sales data accompany information on each manufacturer and importing entity. Reports of recent significant events are included.

All sales data are from calendar-year reports. Prices are manufacturers' suggested retail prices for base models. When a product line has more than one body style available, the listed price is for the base two-door model.

ALFA ROMEO

Darrell L. Davis, president
Alfa Romeo Distributors of North America
8259 Exchange Drive
Box 598026
Orlando, FL 32859-8026

	1990	1989
U.S. car sales	3,482	2,920
Car share (%)	0.0	0.0

Alfa Romeo, Milan, Italy, is one of the oldest names in the industry and specializes in high-powered, small cars or sporting roadsters. Alfa products have survived in a niche that has seen the fading of grand names like MG and Triumph. The U.S. marketing arm is Alfa Romeo Distributors of North America, a joint venture of Fiat Auto SpA, Alfa Romeo's parent in Turin, and Chrysler Corp., Highland Park, Mich. Alfa Romeo has 193 dealers in the United States.

Spider

Spider has new front and rear end treatments, its first major redesign since 1966 introduction as Duetto, designed by Italian coach builder Battista Pininfarina. Spider is assembled in Arese, Italy.
Price: $20,950 1990 sales: 1,888

164

The all-new sleek 164 sport sedan has a subtle wedge shape, developed jointly by Alfa Romeo designers and Carrozzeria Pininfarina. A five-passenger model, 164 is built in Arese, Italy.
Price: $24,990 1990 sales: 1,549

ASTON MARTIN

M.V. Gauntlett, chairman
Aston Martin Lagonda of North America Inc.
1290 E. Main St.
Stamford, CT 06902

	1990	1989
U.S. car sales	60	34
Car share (%)	0.0	0.0

Aston Martin Lagonda of North America, Stamford, Conn., importer of Aston Martin and Lagonda cars, is a subsidiary of 75-year-old Aston Martin Lagonda Ltd., Newport Pagnell, England, which Ford Motor Co. acquired in 1987. It has 14 U.S. dealers.

Cars are characterized by hand-built quality and high performance. Virage coupe is built at the rate of five per week by hand in Newport Pagnell, Buckinghamshire, England. No 1991 Lagondas will be built, but the car will return, maker says.

Virage

Virage is a British 4-seater with hand-formed aluminum body, 155 mph top speed. Aluminum 32-valve V-8 was developed with Calloway Engineering, Old Lyme, Conn., Chevrolet Corvette converter.
Price: $227,250 1990 sales: 60

BMW

Karl Gerlinger, president and CEO
BMW of North America Inc.
300 Chestnut Ridge Rd.
Woodcliff Lake, NJ 07675.

	1990	1989
U.S. car sales	63,646	64,881
Car share (%)	0.7	0.7

BMW of North America (1975) is the largest sales and marketing subsidiary of BMW AG, Munich, West Germany. It has 377 dealers in the U.S. BMWs, built at three sites in Germany by Bayerische Motoren Werke AG, have a strong reputation as high-performance road cars built in the tradition of German engineering.

BMW is considered an aggressive competitor in what may be the most dynamic part of the American car market, the luxury/performance segment.

3-Series

The compact 3-Series, introduced with the pace-setting 320i in 1977, comes as nine models including two new convertibles and two with 4wd. The 325is coupe has been dropped. The top of the line M3 delivers 192 hp.
Price: $20,300 1990 sales: 29,583

5-Series

The intermediate 5-Series, which was launched in 1988, gets a new base 2.5-liter engine for 1991. Hailed as the world's fastest production sedan, the top-of-the-line M5 was developed by BMW Motorsport in Munich.
Price: $34,900 1990 sales: 23,039

7-Series

The 7-Series is BMW's premier line of sedans. As before there are three models: six-cylinder 735i and long-wheelbase 735iL and 12-cylinder 750iL. There is optional electronic damping control for 1991.
Price: $51,500 1990 sales: 10,460

850i

Creating a new level, the flagship 850i replaces the 6-Series. The limited production model combines a V-12 engine with a six-speed manual transmission, which BMW claims is the first in the world.
Price: $77,700 1990 sales: 305

CHRYSLER CORP.

L.A. Iacocca, chairman
Robert S. Miller Jr., vice chairman
Robert A. Lutz, president
Chrysler Corp.
12000 Chrysler Dr.
Highland Park, MI 48288-1919

	1990	1989
U.S. car sales	860,834	1,019,693
U.S. light truck sales	837,234	984,234
Car share (%)	9.3	10.4
Truck share (%)	18.2	20.6

Walter P. Chrysler, former GM executive, founded Chrysler Corp. in 1925. In 1987, Chrysler bought American Motors Corp., fourth largest U.S.-based car maker. Under that pact, Chrysler and Renault have continued an AMC program to import and make cars with the Eagle badge.

Today, Chrysler has ties with Mitsubisni Motors of Japan. It owns Italian exotic car maker, Lamborghini; has a stake in Maserati of Italy and a venture with Fiat of Italy to sell Alfa Romeo cars.

CHRYSLER-PLYMOUTH

James P. Holden, general manager
Chrysler-Plymouth Division
Chrysler Corp.
12000 Chrysler Dr.
Highland Park, MI 48288-1919

	1990	1989
U. S. car sales		
(Chrysler)	185,535	196,125
(Plymouth)	252,964	306,161
U.S. light truck sales		
(Chrysler)	2,891	1,812
(Plymouth)	171,527	184,943
Car share (%)		
(Chrysler)	2.0	2.0
(Plymouth)	2.7	3.1
Truck share (%)		
(Chrysler)	0.1	0.0
(Plymouth)	3.7	3.9

Chrysler-Plymouth Division of Chrysler Corp. dates to 1928 when the company launched Plymouth and DeSoto cars. During the same year it purchased Dodge Brothers Inc., at that time the industry's third largest company. Today there are 3,002 Chrysler dealers and 2,981 Plymouth dealers in the U.S.

Imperial

The name Imperial has been on and off Chrysler cars for generations. The Y-car returned in 1990 as a front-drive standard-sized car made in Belvidere, Ill. and targeted for the older American traditional buyer.
Price: $26,978 1990 sales: 13,518

PRODUCT PROFILES

LeBaron

Restyled in 1990, the six-passenger front-drive LeBaron sedan is built in Toluca, Mexico. It is an A-car. The convertible and coupe, J-cars, bowed as 1987 models and are built in St. Louis, Mo.; Newark, Del. and Toluca.
Price: $12,995 1990 sales: 87,792

New Yorker

New Yorkers are built in Belvidere, Ill. Front-drive C-car Salon debuted as a 1990 model, bringing back a familiar name. Y-car Fifth Avenue, redone in 1990, is aimed at "mature buyers seeking status and comfort."
Price: $17,971 1990 sales: 77,747

TC by Maserati

The TC by Maserati debuted in 1989 as a front-drive luxury sport covertible/hardtop. Production of the car ended in 1990 in Milan, Italy, by Officine Alfieri Maserati SpA. It is sold in the U.S. by 307 dealers.
Price: $37,000 1990 sales: 3,298

Town & Country

Town & Country is a front-drive 7-passenger luxury miniwagon assembled in St. Louis, Mo. Introduced in July 1989, it has all new styling inside and out and new "quad" seating with four bucket seats for 1991.
Price: $23,956 1990 sales: 2,891

Acclaim

A-car Acclaim was introduced in 1989 as "most researched" Plymouth ever. Built in Newark, Del., Acclaim appeals to young and affluent buyers, the company says. Its Dodge counterpart is the Spirit.
Price: $10,876 1990 sales: 111,405

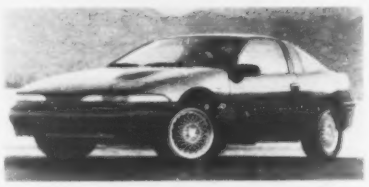
Colt

Made in Mizushima, Japan, by Mitsubishi Motors Corp., Colt was restyled in 1989. An entry level two-door hatchback aimed at young buyers, Colt is available in base and GL models. Wagon has been dropped.
Price: $7,067 1990 sales: 39,602*
*Total sales combined for Plymouth and Dodge Colt.

Colt Vista

Plymouth Colt Vista is built in Okazaki, Japan by Mitsubishi Motors Corp. The compact 5-door wagon seats up to seven passengers and can be ordered with all-wheel drive. Colt Vista made its debut in 1984.
Price: $11,941 1990 sales: 5,430*
*Total sales combined for Plymouth and Dodge Colt Vista.

Laser

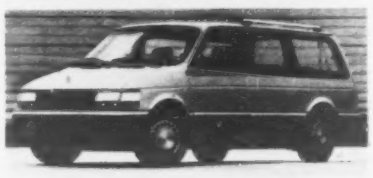


Sporty Laser, coded H24S, entered the market as a 1990 model. Made in Normal, Ill., in a joint-venture between Chrysler and Mitsubishi Motors Corp., Laser has a new optional four-speed automatic transmission.
Price: $10,864 1990 sales: 40,177

Sundance

Plymouth Sundance is a product of the Chrysler assembly plant in Sterling Heights, Mich. The P-car hatchback was introduced in 1987 and is popular with young buyers. More than half are sold to women.
Price: $7,699 1990 sales: 65,590

Voyager



Voyager, considered the "gold standard" of minivans bowed in 1984, is sold in 5- and 7-passenger models. Made in Windsor, Ontario and St. Louis, Mo., it has been redesigned for 1991. All-wheel drive is optional.
Price: $13,266 1990 sales: 171,527

DODGE

Martin R. Levine, general manager
Dodge Division
Chrysler Corp.
12000 Chrysler Dr.
Highland Park, MI 48288-1919

	1990	1989
U.S. car sales	361,689	467,688
U.S. light truck sales	465,953	548,429
Car share (%)	3.9	4.6
Truck share (%)	10.1	11.5

Chrysler Corp.'s Dodge Division dates to 1928 when the company purchased Dodge Brothers Inc., at that time the industry's third largest company. Trucks were big sellers even then and the dealer organization was one of the strongest. Today there are 2,940 Dodge dealers in the United States.

Colt

Colt, restyled as a 1989 model, is made by Mitsubishi Motors Corp. in Mizushima, Japan. The two-door hatchback, aimed at young first-time buyers, is available in base and sporty GL models. Wagon has been dropped.
Price: $7,067 1990 sales: 39,602*
*Total sales combined for Dodge and Plymouth Colt.

Colt Vista

Colt Vista is a product of Mitsubishi Motors Corp.'s assembly plant in Okazaki, Japan. Introduced in the 1984 model year, Vista has optional on-demand all-wheel drive. It can seat up to seven passengers.
Price: $11,941 1990 sales: 5,430*

Car share (%)	0.0	0.0

Bearing the badge of the prancing horse, Ferrari cars are built by Ferrari SpA, Modena, Italy. Cars bear the stamp of Enzo Ferrari, race driver-entrepreneur, who died in 1988. The first true Ferrari was a race car, the 125 built in 1947, and that successful V-12 effort was followed by a steady stream of racers. The 1991 lineup includes 348 TB and TS; Testarossa; Mondial t and the all-new F40, which means "Ferrari 40 years." Ferrari has 40 dealers in the U.S.

F40

Conceived by Enzo Ferrari in 1986 to pay tribute to the philosophy of the LM-series cars of the mid-1960s, F40 was designed by Pininfarina. This all-new 1991 two-seater will accelerate from 0 to 62 mph in 4.0 seconds.
Price: $415,000 1990 sales: 0

Testarossa

The 180 mph Ferrari Testarossa (Redhead) is engineered for high-performance and "from its inception has been the very embodiment of the Ferrari spirit." The 12-cylinder, 48-valve engine generates 380 hp.
Price: $169,000 1990 sales: N.A.

Truck share (%)	29.9	29.3

Ford Motor Co., was founded by Henry Ford whose first car ran June 4, 1896. The great inventor and entreprenurial genius built the business from a one-man operation in a Detroit shed into a broadly held worldwide company selling millions of cars a year.

"The car that put the world on wheels," the Model T was launched in 1908; 15 million were built.

In 1990, Ford bought Jaguar plc, the holding company for Jaguar Cars Ltd., for $2.5 billion.

German Carl Benz built the first workable car, a 3-wheeler, in 1885. A year later, Gottlieb Daimler built a 4-wheel car and the industry was born. Mercedes-Benz reflects tradition, German engineering and craftsmanship. The North American operation, which as 408 dealers, is a subsidiary of Mercedes-Benz, Stuttgart, Germany, which is part of Daimler-Benz A.G., a holding company. Built at two plants in Sindelfingen and Bremen, Germany, Mercedes cars are tough competitors of upper Japanese lines.

190 Class

The 190E is "the baby Benz," but the Bremen-made car has all the amenities of larger sedans. Introduced in 1984, the 190 is offered in two versions, the 190E 2.6 and the 190E 2.3, which is new for 1991.
Price: $28,350 1990 sales: 14,145

300 Class

The 300 Class is made up of seven mid-sized cars. At the heart of this group are four sedans including the 300D 2.5, powered by a turbodiesel engine. There are two wagons (rwd and 4wd) and a coupe.
Price: $41,400 1990 sales: 24,440

S Class

S Class cars are Mercedes' larger models. There are six sedans, four of them long-wheelbase cars denoted by "L" in their designations. The 350SD, new for 1991, has a 134 hp turbodiesel.
Price: $53,900 1990 sales: 25,627

SL Class

Mercedes 8-cylinder 500SL and 6-cylinder sister, 300SL, were launched in 1990 and replaced the 560SL sports car sold since 1972. Performance and safety features are hallmarks of the Bremen-made line.
Price: $78,300 1990 sales: 9,430

Peugeot Motors of America, a subsidiary of Peugeot S.A., has 170 dealers. Established in 1958, all cars sold in the U.S. are built in Sochaux, France. The parent firm was started as a textiles business in 1810. Later, the Peugeot brothers invented the cold-roll steel process. The French firm built its first steam car and the first gasoline car in 1889. In 1894, Peugeot made the world's first station wagon. Peugeot installed diesel engines in its vehicles in 1922. In 1978 the firm acquired Chrysler European operations.

405

The 405 line of front-drive cars, new in 1989, added the Sportswagon in 1990. The wagon, designed by Pininfarina Studie & Ricercha, Turin, Italy, is built in Sochaux, France. ABS is new for 1991.
Price: $15,490 1990 sales: 4,292*
*Total sales combined for 405 and 505

505

The 505 line from Peugeot was trimmed in 1990 to wagons only. Built in Sochaux, France, the 505 wagons have the third seat facing front, unlike most wagons with rear-facing seat. Line includes a Turbo model.
Price: $18,950 1990 sales: 4,292*
*Total sales combined for 405 and 505

German designer and inventor Ferdinand Porsche showed a car bearing his name in 1900, an electric. While he was designing Volkswagen in the late 1930s, his son Ferry Porsche was making a name too. The German company has never built a sedan, only sports cars, and Ferry Porsche has always claimed he was in the entertainment rather than transportation business. Volkswagen and Audi have ties with Porsche A.G. extending back to the 1930s. Porsche Cars North America has 258 dealers.

PRODUCT PROFILES

911

First launched in 1963, 911 has become automotive art. The Turbo returns for 1991. Tiptronic transmission allows clutchless manual shifting or automatic operation. All are built at Stuttgart, Germany.

Since its birth in 1968, Corolla output exceeded 15 million units. Corolla bowed in its current form in 1983, and is built in Fremont, Calif., by New United Motor Manufacturing. All-new 1992 Paseo will replace SR5 and GTS.
Price: $9,148 1990 sales: 228,211

Cressida

Intermediate Cressida has advanced chassis and powerful engine design for outstanding performance. Electronic 4-speed automatic is Cressida exclusive. Built in Motomachi, Japan, line was introduced in 1978.
Price: $22,698 1990 sales: 12,863

MR2

An all-new MR2 debuted as a 1991 model. Built by Central Motor Corp. in Japan, MR2 is longer and has more room than its predecessor. It has improved handling, available ABS and more horsepower and torque.
Price: $15,448 1990 sales: 14,257

Supra

Supra carries Toyota's performance flag in the product parade. The sporty, specialty car packs 200 hp under its hood, has 4-wheel discs, double-wishbone suspension. Supra is assembled in Tahara, Japan.
Price: $24,320 1990 sales: 6,419

Tercel

The fourth-generation Tercel debuted as a 1991. It has improvements in style, performance, interior design and ride. Built in Takaoka, Japan, Tercel is available in 2-door or 4-door. Hatchback has been dropped.
Price: $6,588 1990 sales: 90,808

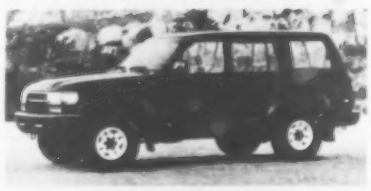
PRODUCT PROFILES

4Runner

This sport-utility went 4-door in 1990 and also got rear-wheel ABS that uses hydraulics instead of engine vacuum as power for brake actuator. Larger tires on steel wheels are available. It is built in Tahara, Japan.
Price: $16,818 1990 sales: 48,453

Land Cruiser

A longer, wider, redesigned Land Cruiser debuted as a 1991 model. Built in Honsha, Japan, Land Cruiser features an aero style, increased room and luxury options. Optional third seat allows room for eight.
Price: $22,488 1990 sales: 6,194



Pickup

Anti-lock brakes became available on all Toyota pickups for 1991. Fuel injection has been added to the base engine. Built in Tahara, Japan, the pickup truck line has been streamlined to five models.
Price: $8,448 1990 sales: 181,719

Previa

Introduced as a 1991 model, sleek Previa was designed from the ground up to meet American tastes and needs. Built by subsidiary Toyota Auto Body in Karia, Japan, Previa has an aerodynamic orbital shape.
Price: $14,698 1990 sales: 42,199

LEXUS

J. Davis Illingworth, group vp and general manager
K. Usuda, senior vice president
Lexus Division
Toyota Motor Sales U.S.A. Inc.
19001 S. Western Ave.
Torrance, CA 90509

	1990	1989
U.S. car sales	63,534	16,302
Car share (%)	0.7	0.2

Launched in 1987, Lexus is the luxury car division of Toyota. It has 121 dealers in the U.S. The first Lexus cars, built by Toyota Motor Corp. in Japan, debuted in 1989. Its arrival put a Japanese maker for the first time in direct competition with Mercedes-Benz, BMW, Jaguar, Cadillac and Lincoln.

ES 250

Lexus ES 250 debuted in September, 1989 and immediately became an industry benchmark. Assembled in Toyota City, Japan, the sedan has V-6 engine. Standard transmission is a 5-speed manual.
Price: $21,500 1990 sales: 22,433

LS 400

Debuted in 1989, LS 400 is a 5-passenger sedan powered by an aluminum V-8. LS 400, six years in development, is built in Toyota City, Japan. A 2-door model bows in 1992.
Price: $39,000 1990 sales: 41,101

VOLKSWAGEN

William Young, president & CEO
Volkswagen of America Inc.
P.O. Box 3951
888 W. Big Beaver Rd.
Troy, MI 48007-3951

	1990	1989
U.S. car sales	129,705	128,503
U.S. light truck sales	6,643	5,147
Car share (%)	1.4	1.3
Truck share (%)	0.1	0.1

Volkswagen dates to the 1930s when engineer Ferdinand Porsche designed a small car with the backing of Adolf Hitler. He tied in a road-building campaign and put Germany on wheels. During World War II, the VW Wolfsburg plant became an army truck repair center. Workers found and assembled parts into two cars. By the end of 1945, VW had built 1,785 VW Beetles. The Bug revolutionized transportation as the Ford Model T had. In the U.S. there are 744 Volkswagen and 341 Audi dealers.

Cabriolet

Volkswagen marked its 35th anniversary of open-air motoring in the U.S. by adding a designer edition and a power top to its Cabriolet line for 1991. It is built by Wilhelm Karmann GmbH in Osnabrueck, Germany.
Price: $16,540 1990 sales: 7,615

Corrado

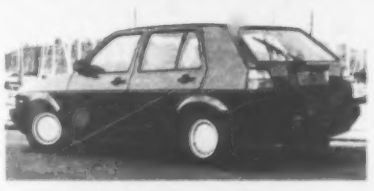
Styled by Volkswagen Design with extensive wind tunnel development, Corrado debuted as a 1990 model. It is built by Wilhelm Karmann GmbH, one of Europe's oldest coachbuilders in Osnabrueck, Germany.
Price: $19,100 1990 sales: 5,675

Fox

Built in Sao Paulo, Brazil, subcompact Fox got a new look for 1991. The front and rear end have been restyled and its powerplant is now equipped with Volkswagen's patented Digifant electronic engine management system.
Price: $7,370 1990 sales: 22,640

Golf/GTI

Golf, Europe's best-selling car for the past seven years, has been continually refined. It is assembled in Puebla, Mexico. Golf GL is rated at 32 mpg on the highway. GTI achieves 0-to-60 mph in 8.9 seconds.
Price: $9,270 1990 sales: 17,122



Jetta

Built in Puebla, Mexico and Wolfsburg, Germany, Jetta is available in three models with a choice of three powerplants. The wedge-shaped, European road car has a comprehensive list of standard equipment.
Price: $10,630 1990 sales: 58,314

Passat

Introduced in 1990, Passat is VW's first entry in the mid-size family car market. Popular in Europe, Passat has improved instrumentation for 1991. It is built in Emden, Germany in "world's most automated plant."
Price: $15,590 1990 sales: 18,274

Vanagon

Vanagon descended from the VW Bus, which VW claims as the first minivan on the U.S. market some 40 years ago. Produced in Hanover, Germany, Vanagon is available in seven models including a camper.
Price: $14,930 1990 sales: 6,643

AUDI

Richard L. Mugg, vice president
Audi of America
P.O. Box 3951
888 W. Big Beaver Rd.
Troy MI 48007-3951

	1990	1989
U.S. car sales	21,106	21,283
Car share (%)	0.2	0.2

The company imports cars made by Audi AG of Ingolstadt, Germany, a carmaker founded by August Horch in 1909. Audi, a division of the Volkswagen Group, entered the U.S. market in 1969. Audi of America was formed in 1985 to replace Volkswagen of America's Audi Division. It has 341 dealers in the U.S.

Coupe Quattro

Audi has made a coupe for nearly 60 years and says history and accumulated technology are embodied in Coupe Quattro. Built in Ingolstadt, Germany, car has awd, ABS and twin cam, 164 hp, 20-valve engine.
Price: $31,650 1990 sales: 848

V8 Quattro

Introduced as a 1991 model, Audi's engineering showstopper is the luxurious V8 Quattro with all-wheel drive, ABS and 32-valve aluminum engine with digital electronic control. It is built in Neckarsulm, Germany
Price: $51,500 1990 sales: 1,934

PRODUCT PROFILES

80

Available with 4wd, cars in the 80 series from Audi have top speed of 122 mph and such automotive goodies as driver air bag and electronically tuned radio. Audi 80 is produced in Ingolstadt, Germany.
Price: $20,750 1990 sales: 4,402

90

Audi 90 was given a new 20-valve, 5-cylinder engine, torque-sensing differential and driver air bag for 1990. Produced in Ingolstadt, Germany, the base model got a new 4-speed automatic transmission for 1991.
Price: $26,250 1990 sales: 3,380

100/200

Built in Neckarsulm, Germany, the 100/200 lineup consists of five models. The 200 Quattro sedan and wagon have a new 20-valve turbo engine that generates 217 horsepower. The sedan accelerates 0-to-60 in 6.6 seconds.
Price: $28,750 1990 sales: 10,529

YUGO

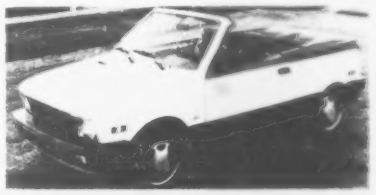
John Speich, president
Yugo America Inc.
120 Pleasant Ave.
P.O. Box 730
Upper Saddle River, NJ 07458-0730

	1990	1989
U.S. car sales	6,359	10,576
Car share (%)	0.1	0.1

U.S. bankruptcy court in 1989 approved Yugo America Inc.'s reorganization plan and it emerged from Chapter 11 as a fully owned subsidiary of the Yugoslavian manufacturer, Zastava. Until then, Yugo America, a car importer since August 1985, had been a subsidiary of Global Motors Inc., Upper Saddle River, N. J. Zastava, based in Kragujevac, is a 136-year-old diversified conglomerate producer of cars, trucks, defense systems and machine tools. Yugo America has 175 dealers.

Cabrio

Yugo Cabrio, made in Kragujevac, Yugoslavia, is a front-drive subcompact convertible with room for four. For 1991, the low-priced car gets the fuel-injected, 1.3-liter four-cylinder engine utilized in GV Plus.
Price: $8,990 1990 sales: 6,359*
*Total sales combined for all Yugo cars.



GV Plus

Manufactured in Kragujevac, Yugoslovia, GV Plus is merchandised as the lowest-priced new car. Features: Bosch multiport electronic fuel injection, five-speed manual transaxle and room for four.
Price: $4,825 1990 sales: 6,359*
*Total sales combined for all Yugo cars.

VOLVO

Lennart Jeansson, chairman;
Joseph L. Nicolato, president
Volvo Cars of North America
1 Volvo Dr.
Rockleigh, NJ 07646

	1990	1989
U.S. car sales	89,894	102,580
Car share (%)	1.0	1.0

Volvo Cars of North America has imported Volvos to the United States for 35 years. It is a subsidiary of Volvo AB, Gothenburg, Sweden, which sells about 400,000 cars worldwide annually. Volvos enjoy solid - if not spectacular - sales in this country of about 100,000 units per year. There are 407 Volvo dealers in the U.S. In the late 1980s, Volvos were called yuppie cars but the company says, "Volvo builds rational cars for families who value longevity, safety and value for the money."

240

Introduced in 1975, the 240 series has been simplified for 1991. The entry level Volvo has been consolidated under a unified 240 badge. Available with ABS, 240 is built at a single plant in Torslanda, Sweden.
Price: $19,620 1990 sales: 32,410

740

After an exterior makeover in 1990, the 740 line gets a redesigned driver's environment for 1991. Series has two models, base and Turbo. It is built at three sites: Ghent, Belgium; Torslanda and Uddevalla, Sweden.
Price: $23,175 1990 sales: 46,070

940

The new 940 series, GLE, Turbo and SE, replaces the 760 which bowed in 1983. Models feature a redesigned rear body. It is built in Halifax, Nova Scotia; Ghent, Blegium and Kalmar, Sweden.
Price: $27,885 1990 sales: 912

Coupe

At the top of the Volvo line is this exclusive two-door, designed and built by Nuccio Bertone of Turin, Italy. Previously called 780, Coupe is offered in a single limited production turbocharged model for 1991.
Price: $41,945 1990 sales: 921

U.S. new-truck outlets

The number of new truck dealer outlets in the U.S. decreased by 197 last year, bringing the Jan. 1, 1991 truck dealer population to 25,692. Seventeen makers increased their franchise totals; 13 showed declines; one remained unchanged. Makers of vans and sport-utilities are included in the census. Figures were collected from manufacturers.

We're ahead of our time.

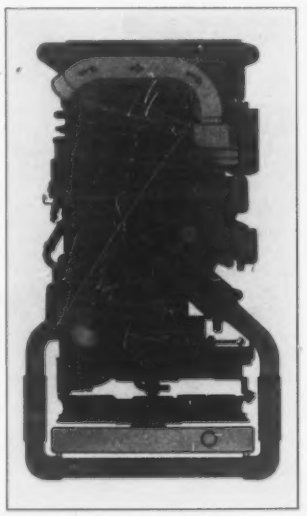
Introducing the 1992 Isuzu trucks. Months ahead of our typical new model year introduction. And years ahead of the competition.

New intercooled engine technology. For 1992, our engineers have focused their attention on our workhorse diesels. Specifically, on maximizing power and efficiency while minimizing exhaust emissions.

Through the application of new intercooled, turbocharged engine technology we've met these goals.

The intercooling system of our 4- and 6-cylinder diesel engines utilizes a finned heat exchanger in front of the radiator to cool and increase the density of the turbocharged air.

This ensures that the greatest amount of air enters the cylinders from the turbocharger and that the air/fuel mixture is as lean as possible.



The result: cleaner, more efficient fuel burning, greater horsepower and more torque. And, engines that meet the tough new 1991 emission standards.

Always looking ahead. The innovation represented by our 1992 engines is hardly surprising. Isuzu Truck has always been known for its forward thinking.

Take, for instance, the low cab forward design of our N-series and F-series class 3 to 7 trucks. By moving the front axle back and the cab lower and closer to the road, we've maximized maneuverability, increased body length and improved visibility.

More forward thinking: Isuzu Truck uses an integrated design approach. This means that before something is added to our trucks—like our new engines—every step is taken to assure that the new components work perfectly with existing systems.

The pioneering concept of a larger, "user friendly" cab has done wonders for driver productivity. Convenient features like ample storage space, tilt/telescopic steering, and options like air conditioning and automatic transmission, have enabled drivers to work longer and more efficiently.

Plus, all Isuzu Truck cabs feature immediate engine access for routine maintenance and tilt cabs for service.

Thorough testing. Before a new Isuzu Truck model is released, it has undergone exhaustive research. Every new model, every engineering innovation is tested extensively for two years or more in every conceivable climate and road condition. Including yours.

So it's not unusual for an Isuzu truck to rack up 150,000-200,000 miles, or more, with nothing required but oil changes and regularly scheduled maintenance.

No wonder we're able to offer a 36-month, unlimited mileage warranty on every engine.

And no wonder Isuzu Truck has been the best selling commercial import truck for five years running.

For the location of your local Isuzu Truck dealer, call 1-(800)-255-2550 and arrange to take a 1992 test drive, today.

ISUZU TRUCK

Works for you.

It's up to us. Automakers and Du Pont. Because together we can solve the future of refrigerants. Introducing Du Pont SUVA™ TRANS A/C refrigerant for automotive air conditioning systems. It's one of the first in a new generation of environmentally enlightened refrigerant alternatives from Du Pont. Alternatives that are effective, practical and commercially available. So that we can begin working hand in hand today, developing alternatives the world can live with tomorrow, call 1-800-533-1313.

That's why we created The Budd Network.℠
It's your total engineering and manufacturing resource. Because when we roll up our sleeves, you get a variety of viewpoints. And you get them fast.

Consider our four Detroit-based technical centers. Or the state-of-the-art prototyping facilities of the Milford Fabricating Company. And the quality specialists of our Plastics, Stamping and Frame, and Wheel and Brake Divisions.

In short, The Budd Network can turn the words "what if" into "can do." Because your success is a function of time.

And it's our specialty.

Let's talk. Call (313) 643-3520. Put The Budd Network to work for you.

THE Budd COMPANY
We put it all together.

NOW ONE SIMPLE KEYSTROKE BRINGS YOU OVER 1,000,000 BYTES OF AUTOMOTIVE DATA

INTRODUCING THE ELECTRONIC 1991 AUTOMOTIVE NEWS MARKET DATA BOOK

There's never been an easier way to access, analyze and organize automotive statistical data. Because just about all the data published in the Automotive News Market Data Book is now available on Lotus 1-2-3 worksheet files for use on IBM and IBM compatible PCs. Over 1,386,000 bytes of automotive data conveniently packaged in sets of 5.25" or 3.5" diskettes.

A Comprehensive View of – the Automotive Industry . . . at Your Fingertips.

Just like the printed version, the Electronic Automotive News Market Data Book provides detailed information on the domestic and imported car and truck market, in both the U.S. and Canada.

Included are tables reflecting:

PRODUCTION–1990
U.S. Car
U.S. Truck
Canadian Car
Canadian Truck

SALES–1990
Domestic Car
Import Car
Domestic Truck
Import Truck
Canadian Car
Canadian Truck

SPECIFICATIONS–1991

PRICES–1991
Domestic Car
Import Car
Domestic Truck
Import Truck

How the Electronic Market Data Book Will Make Your Job Easier

— Save inputting or re-keying time
— Eliminate inputting errors
— Customize each chart to your needs
— Simple, fast reference
— Printed reports in minutes instead of hours
— Useful information . . . on demand

Order Your Set Today!

Place your order by calling 1-800-678-9595 (ask for Dorothy Wood), or fax it to us at (313) 446-1650. Or, fill out and mail in the coupon below to: Automotive News Data Center, 965 E. Jefferson, Detroit, MI 48207-3185. Cost is $200 U.S. per set of diskettes. Available starting May 29, 1991.

GLOSSARY

1. **CAFE** — Corporate Average Fuel Economy. The mpg average that a manufacturer must achieve for its entire fleet of cars for a model to avoid paying a penalty. There is a separate CAFE for light trucks. Current CAFE for cars is 27.5 mpg.
2. **CALENDAR YEAR PRODUCTION** — vehicles produced from January 1 to December 31.
3. **CALENDAR YEAR SALES** — retail sales of vehicles from January 1 to December 31.
4. **CAPTIVE IMPORTS** — a vehicle made outside the U.S. or Canada and sold in the U.S. by a Big 3 company.
5. **DAYS' SUPPLY** — number of days needed to sell all vehicles in inventory, based on the previous month's sales rate. Inventory and days' supply may be expressed in terms of industry as a whole or for individual companies, makes or nameplates.
6. **DEALERSHIP** — the authorized (franchised) representative of a motor vehicle manufacturer/importer.
7. **DOMESTIC** — a vehicle produced in the U.S. or Canada.
8. **FLEET SALES** — sales to an individual or company that has been granted fleet status by a manufacturer — usually ten or more purchases at a time.
9. **FRANCHISE** — a contract authorizing a person or persons to represent a vehicle manufacturer/importer for sales and service for a specific period.
10. **IMPORTED-CAR** — a vehicle produced outside of the U.S. or Canada and sold in the U.S.
11. **INVENTORY** — unit count of vehicles on hand at dealerships, ports of entry and in transit on a specific date.
12. **LIGHT-VEHICLE** — a car or light truck (with a gross vehicle weight of 14,000 pounds or less).
13. **MAKE** — brand name of a car or truck, e.g., Chevrolet, Ford, Dodge, Honda.
14. **MARKET SEGMENT** — the category of the market in which a vehicle competes. Example: subcompact, compact, intermediate, standard, luxury, specialty, van, minivan, pickup, sport-utility. The portion of the entire market represented by sales of a specific make.
15. **MODEL** — body style: e.g., 4-door sedan, convertible, 3-door hatchback, station wagon.
16. **MODEL YEAR PRODUCTION** — vehicles produced bearing the designation of a specific model year. It does not coincide with calendar year production.
17. **MODEL YEAR SALES** — retail sales of vehicles from October 1 to September 30.
18. **NAMEPLATE** — given name of a vehicle by its manufacturer, e.g., Caprice, Mustang, Dynasty, Accord. Line is a synonym for nameplate.
19. **NIADA** — National Independent Automobile Dealers Association (a used-car organization).
20. **OUTLET** — a synonymous with dealership.
21. **PLATFORM** — the main structural element or backbone of a vehicle to which the suspension, powertrain and body are mounted. In older vehicles, it was traditionally the frame. In newer unibody vehicles, it is the lower, horizontal sheet metal stamping.
22. **REGISTRATION** — motor vehicle ownership information that is filed with the state.
23. **RETAIL SALES** — a new-car or truck sale, including both dealer and fleet deliveries and dealership leases.
24. **SALES BY MANUFACTURER MARKETING UNITS** — sales totals with domestic totals including captive imports and import totals, including transplants and all corporate divisions.
25. **SHARE (MARKET SHARE)** — the portion of the entire market represented by sales of a specific make.
26. **SPECIFICATIONS** — vehicle dimensions and capacities including engine and drive systems.
27. **TRANSPLANT** — a vehicle built in the U.S. or Canada by a foreign manufacturer.

AUTOMOTIVE NEWS/JOE WILSEMS

Viewing the 1992 Eighty Eight on the Design Dome patio are GM designers Robert Luyckx, left, and Dennis Burke. GM division heads, engineers and designers often make product decisions in the patio's natural light.

'92 H-cars herald new era at GM

Four-Phase Process disperses decision-making powers

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Before school bells call children back to class this fall, Oldsmobile, Pontiac and Buick hope to be reaping benefits from their all-new H-body cars, fruits of a new age of decision-making at General Motors.

The Oldsmobile Eighty Eight, Pontiac Bonneville and Buick LeSabre are among the first examples of how well GM has learned its lessons in the classroom of coordinated, well-focused automotive product development.

Workers at GM assembly plants in Wentzville, Mo., and Flint, Mich., are counting on the new H-body cars to keep them steadily employed. About 9,000 dealers count on the cars to deliver about 350,000 sales.

The three large American cars, which share major components and sheet metal but differ in appearance, personality and target buyers, began the trek to the marketplace even before their predecessors left kindergarten. The 1992 H-cars are examples of a new power regime at GM — a decision-making process in which nearly everyone connected with a vehicle program carries a big stick.

The real power is not in the hands of any person; it is in the Four-Phase Process that GM has established to bring out vehicles on time and within budget.

Edward H. Mertz, Buick general manager, said the Four-Phase Process will nearly produce a car all by itself, without the division getting involved.

"But to get a really good car, one that is focused on a target audience, it takes more of a conductor to make sure that all those people are . . . going down a rather narrow focused path, rather than leaving those things to chance," he said.

Mertz thinks of himself and his staff as the conductor when the Four-Phase Process relates to Buick.

Charles M. Jordan, vice president in charge of the GM design staff, also pays homage to the Four-Phase Process. But in his mind, he and his staff are the conductors.

Dear Reader,

Analysts and annual report editors draw charts of corporate power that look like pyramids, with the CEO at the top and assemblers or clerks at the base. The model probably defines pay levels, and it may define responsibility, but it does not reflect the modern ways in which car companies delegate authority.

The decision to make a new car and the process of bringing it to market are the central events of the automobile industry. To better understand that process, *Automotive News* reports over the next three weeks on how General Motors, Chrysler Corp., Ford Motor Co. and Honda Motor Co.'s American branches developed new products for the U.S. market.

Dumping charges sought against Mazda, Toyota

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Big 3 have accused Toyota and Mazda of dumping minivans into the United States by pricing the vehicles at less than cost.

General Motors, Ford Motor Co. and Chrysler Corp. have asked the federal government to slap the two minivans with tariffs. The Big 3 allege that the Toyota Previa is underpriced by a range of 5.4 percent to 30.5 percent and the Mazda MPV by 14 percent to 27 percent.

Based on those percentages, *Automotive News* estimates that duties could add about $3,000 to base models of the Toyota Previa and Mazda MPV, and less to better equipped models where the alleged dumping margins are smaller.

McCurry: It's Japan bashing

Mazda and Toyota, which sell the only two Japanese minivans currently on the market, denied the charges.

"Do you call that Japan bashing or what?" asked Robert McCurry, executive vice president of Toyota Motor Sales U.S.A. Inc. "Mr. Iacocca's run out of excuses. They've (the Big 3) got over 80 percent of the minivan market, and they're crying that they are the injured player."

Ford's Aerostar sales were off 26.8 percent through April; Chrysler's minivans were off 11.9 percent, and GM's minivans were down 21.8 percent.

Meanwhile, sales of the Mazda MPV rose 24.5 percent in the four-month period, and sales of the Previa, which was just starting in the market a year ago, more than doubled to 16,809.

"We introduced a new product and really entered the segment for the first time," said James Olson, vice president for external affairs at Toyota Motor Sales. "We think it's absurd that they would claim that we are hurting them."

Sources said the domestic industry felt its best shot at winning an unfair trade case against Japanese makers was with minivans. By filing a dumping petition, the three manufacturers are sending a signal to public policy makers both here

Big 3 to U.S.: We're hurting, Japan isn't

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Big 3 say they they are struggling to maintain their multi-billion dollar product programs and fear they may have to make cuts while Japanese competitors step up their product investments.

Stempel: too few earnings

That theme stood out in the records of meetings between Big 3 executives and 41 members of Congress who visited Detroit's automakers in late April. Texts were released by the Congressional Competitiveness Caucus last week.

Ford Motor Co. President Philip E. Benton Jr. carried the point further last Wednesday. In an interview with *Automotive News*, Benton said that Ford's future product programs could be endangered if

Minimum of downtime expected as makers switch to 1992 models

By Edward Lapham
MANAGING EDITOR

U.S. and Canadian assembly plants are scheduled to make a fairly quick and smooth changeover to 1992 models this summer, despite the uncertainty of the light-vehicle market and the outlook for the new model year.

The model changeover schedule includes a variety of shutdown periods. But the lack of many major product changes for 1992, and the already completed introduction of other 1992 models such as Ford Crown Victoria and Mercury Grand Marquis, means most plants will not need lengthy transformations to new-model output.

As in previous years, many plants will make very quick switches with a running changeover or limited downtime lasting

Chrysler scales back plans for Austria:
Chrysler Corp.'s Eurostar minivan venture in Austria has cut its early production targets by more than one-third but still expects to reach full line speed by July 1992. Page 3.

Slump threatens Ford's plans

By Peter Brown
EDITOR

Ford Motor Co. President Philip E. Benton Jr. says the company's future product plans could be endangered if the recession continues through the fourth quarter.

Product spending threatened, Page 1

But Benton predicted that vehicle sales will pick up in that quarter with the new model year.

He also said Ford is working on changes to two of its biggest sellers that have been overtaken by competitors. Both the Escort, which was all-new just a year ago, and the F-series pickup truck, which gets a reskin this fall, need styling changes, Benton said.

Looking fit and robust after returning to work April 22 following two months off for heart bypass surgery, Benton, 62, acknowledged that competitors have eaten away at Ford's share in several segments. In the first four months of 1991, Ford's U.S. market share for cars and light trucks dropped 1.3 percentage points to 23.3 percent in a recession-wracked market.

In an interview, Benton said Ford and the entire industry have managed inventory and production better during this recession than in any previous one. First-quarter car and truck production was the lowest since first quarter 1982.

"So at the first opportunity, I can assure you we will pour the coals to the production," Benton said. "If it does pull out as I think it will in the fourth quarter, we'll see production. We will anticipate that in our scheduling."

He bases his prediction on previous recoveries. "We pull out very slowly for a good six to nine months, and then with the new model year, why there seems to be a dawning."

But if a recovery fails to materialize, "you'd probably have to postpone a few things then. But I really don't think that is going to happen."

The company made the second-most drastic cut in April by cutting its dividend from 75 cents a share to 40 cents, Benton said.

"Once you've crossed the dividend, why, that's a pretty clear sign that the next thing, if you have to go to the next thing, is product," he said.

He said that, even adjusted for inflation, Ford plans to spend more on product programs in the next five years than the estimated $26 billion it spent from 1985 to 1990.

Asked why Ford is losing market share, Benton cited expanded competition against high-volume Ford cars: Mustang, Probe and Taurus. He also said, "The Escort has not been as successful as we had hoped and planned. One of our main jobs is to address that."

Escort was the top seller of the 1980s, peaking in 1989. In the first four months of 1991, sales dropped 14.7 percent to 77,795 units.

Except for the Escort wagon, Ford made the new car "look too much like the old car," Benton said. "And I certainly participated in that decision. But I say in retrospect that that was a mistake.

"The old Escort filled a beautiful niche, and it was very well priced. Now the new Escort is a better car, and yet it costs more. And I think a lot of our customers — this was their entry-level vehicle — have gone back to buying used cars. And some of that's our own fault. We put more money into making it a better car than some people could afford, and you don't address that overnight."

When the new Escort was introduced in spring 1990, prices of most versions rose about $500, although the price of the popular GT rose $1,219 to $11,063.

The full-sized F-series pickup truck, the nation's vehicle sales leader for years, is slightly behind the Chevrolet C/K series in both the model year and calendar year.

Chevrolet, with better styling and flush glass in its big pickups, has managed "to appeal to the aesthetic side," he said. "And I think we are still doing the lead job in the work side of it."

While declining to give a timetable, Benton said, "We have plans to address that" gap in design.

The 1992 F-series is more rounded in front, but strongly resembles the current truck.

Ford President Philip Benton said the automaker reversed its dealer retail incentives after it became clear that the company "had to go back to advertising the deal."

Benton: Ford performance has followed Murphy's law

Among the other points that Ford President Philip Benton touched on:

- Ford's combined losses of $1.4 billion in the last two quarters — coming after a confident prediction that the company would remain profitable in a downturn — stem from an unexpected confluence of bad factors: war worsening the recession, "and we didn't expect to get clobbered in almost every one of our major profit centers in the world."
- Japanese automakers probably won't get more than 20 percent of an open European market, in part because Europe will require strict local content for Japanese-brand cars. "It's not going to be a pussycat like the United States."
- Ford is not working on a full-sized pickup with Mazda Motor Corp. But "we're looking at opportunities to get together in the compact" truck range.
- Ford gave up its attempt to substitute dealer incentives for customer incentives because "we discovered very quickly that with everybody else out there saying, 'Mr. Customer, if you come in you get $750,' and we didn't say it, then they didn't come in to our dealerships."

IRS pressures dealers on reporting big cash transactions

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

The Internal Revenue Service is renewing pressure on car dealers to comply with cash reporting regulations.

Last week, the IRS raided Don Massey Cadillac, the nation's largest Cadillac retailer, in search of records on large cash transactions. That followed separate investigations of 29 dealerships in Massachusetts for possible violations of federal cash transaction laws.

In Plymouth, Mich., Don Massey Cadillac was raided Thursday by about 20 IRS agents who seized records relating to "8300" forms, which federal law requires businesses to file when they handle a cash transaction of $10,000 or more. The dealership sells Rolls-Royce, Sterling and Cadillac makes.

Bill Collins, general manager of Don Massey Cadillac, said the dealership has complied with all cash transactions laws.

But Sarah Wreford, spokeswoman for the IRS in Detroit, said, "We had reasonable cause to believe a crime has been committed." She would not elaborate.

In Massachusetts, the IRS conducted a statewide sweep of 29 dealerships during the week of May 20. The IRS said that at 22 of the dealerships, it found 73 unreported cash transactions totaling $1.27 million.

Wreford said filing of formal charges can take months after an investigation produces discrepancies in their findings.

Penalties for failing to file reports range from $100 to $25,000 per transaction.

Frank Keith, IRS spokesman in Washington D.C., said the IRS is not considering a nationwide crackdown on car dealerships.

Wreford said the Massey investigation was not a sting operation like the "Operation Drug Wheels." Last October, that operation led to charges of money laundering and violations of cash reporting laws against five New York City-area car dealerships.

On May 24, Bronx Acura and Bronx Honda pleaded guilty to money laundering and cash reporting violations. Earlier in the year, Manhattan Mazda and Manhattan Nissan Inc. pleaded guilty to similar charges. Criminal charges against Manhattan Mercedes-Benz were dismissed.

Wreford said "We are not expecting merchants to ask customers, 'Are you a doctor, lawyer, drug dealer?' All we are saying is that if you get $10,000 or more in cash — report it."

The Associated Press contributed to this report.

Corrections

- A timeline chart in the May 27 issue had an incorrect introduction date for the Jeep ZJ sport-utility. It goes into production in January 1992 and should go on sale several months later.
- A story in the May 27 issue on Ford Motor Co. warranties listed a $50 deductible with the one-year/12,000-mile warranty on all Ford and Mercury products. There is no deductible on those products. The story also did not mention that all Ford and Mercury products carry a four-year/50,000-mile warranty on powertrains.

Nissan's swap of converter metal rocks markets

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Nissan Motor Co. roiled world commodities markets last week when it announced Thursday it had developed a catalytic converter that uses palladium instead of the more expensive platinum as the key agent.

The violent market response to the announcement was puzzling, since U.S. makers have equipped tens of thousands of cars with platinum-free converters.

In frenzied trading around the globe, platinum prices crashed the daily trading limit, palladium jumped the $6-an-ounce daily limit to $99.75 and the price of rhodium, another precious metal used in catalytic converters, fell 16 percent.

Nissan announced Thursday that it would have a palladium-based device available in 1994. The company estimated that production costs would be about one-third the cost of a conventional platinum-loaded catalyst, assuming palladium prices do not rise significantly.

The metals serve as the active material in automotive catalytic converters, which convert the tailpipe gases hydrocarbon, carbon monoxide and oxides of nitrogen into less harmful gases.

Palladium rose over $6 an ounce in one day of futures trading after Thursday's announcement. The more volatile platinum, a speculator's favorite that has traded above $600 an ounce, fell from almost $400 to around $375.

At Nissan, the new catalytic converter will be used at first only in the company's minicars.

In finding ways to meet stricter clean-air rules, auto engineers have looked at ways to pre-heat catalysts, which work only at very hot operating temperatures.

Besides their lower cost, some experts say that palladium offers the possibility of more quickly reaching operating temperatures.

Palladium has a slightly lower conversion efficiency than platinum, and would likely have to be used in combination with expensive rhodium, which fetches more than $3,000 an ounce.

Staff Reporter Mary Ann Maskery in Tokyo contributed to this report.

Chrysler, Ford already cut platinum

Chrysler Corp. and Ford Motor Co. already have production vehicles equipped with platinum-free catalysts:

- Chrysler uses palladium-loaded catalysts on its 2.5-liter, four-cylinder-powered minivans.
- Ford has a fleet of more than 50,000 1990 Thunderbird/Cougar models with palladium-loaded catalysts. Ford owns two patents and expects two more on a palladium-only catalyst for cars and light trucks.

In 1989, Toyota Motor Co. said it had developed a palladium-loaded catalyst. But the unit uses some platinum, and the company still hasn't set a date for introduction.

GM Service Technology Group tackles technical challenge

By Dale Jewett
SERVICE EDITOR

WARREN, Mich. — Meeting future challenges of fuel economy, emissions control and ease of service is going to take lots of smarts.

"Smart cars, smart tools and smart people, that's what we're about," says Richard Lannen, general director of General Motors' Service Technology Group.

Working with GM's car marketing and engineering groups, the service brain trust pulls together the technical resources to create diagnostic capabilities and tools.

Those include the Tech 1 hand-held diagnostic computer, T-15 technical information and diagnostic terminal, the T-100, T-100/20 and T-100/70 series of service systems for North America, and the recently introduced Tech 15 system for GM Europe.

A key component of the diagnostic systems is a portable data recorder that allows technicians or owners to capture engine computer information to help locate intermittent problems, which Lannen says is the biggest challenge facing service technicians.

More importantly, the group writes and updates the service computer software that is the heart of the diagnostic systems, a library of information that covers GM cars from the past decade.

Software writers in Romulus, Mich., produce a series of seven different compact discs of service information for both GM and aftermarket diagnostic equipment. On the discs are service bulletins, service manuals and vehicle specifications.

While it probably won't make the *Billboard* magazine charts, the group puts out 4,600 discs each month.

The goal is to improve the quality of the product and the ownership experience, Lannen says. "I think some of the volume-oriented ways of the past have come back to haunt us."

The Service Technology Group was formed in 1989 with bits and pieces from GM's car and component divisions to concentrate technical resources. It has a separate board of directors, comprising representatives of the different car and components groups, and reports to corporate through Chevrolet-Pontiac-GM Canada engineering.

But key elements of the group's work were put in place before its formation, beginning with the installation of assembly line data links in 1980. The links allowed technicians to retrieve electronic information from engine computers.

The developments continued in 1985 with the addition of two-way communications with engine, and later body-control, modules. It made possible the GM-CAMS (T-100) diagnostic service system, giving GM a four-year head start over Ford Motor Co. and Chrysler Corp., which just introduced their own service diagnostic systems this year.

There are now about 4,400 CAMS units at GM dealers, covering about half the dealer body, Lannen said, but that group accounts for about 80 percent of sales.

A training network completes Lannen's "smart cars-smart tools-smart people" troika.

Lannen says one of the biggest changes at GM has been his group's involvement in the Four Phase program process, the system for designing and building new cars.

Through its Service Readiness Group, service and diagnostic requirements are considered in some of the earliest plans and decisions made for a new model, allowing for simultaneous development of service techniques and special tools, if needed. Service people now work in the engineering groups. And feedback from service actions is directed to engineering groups working on new cars.

"It didn't always used to be that way," Lannen said. "I remember when we were given new products sometimes only six months or so before introduction to develop service procedures. Today we're there two or three years ahead of introduction."

And working on future models poses a new host of challenges. Among them:

- New on-board diagnostic regulations, proposed by the California Air Resources Board and known as OBD II, will require a standardized data link in new cars beginning in 1994. The link will let technicians access diagnostic data from emissions-related control modules.

The regulations, which are almost certain to be approved and will be used as a nationwide pattern by EPA, call for monitoring a variety of conditions including catalyst efficiency and misfires and monitoring imputs and outputs for the control module.

In conjunction with the rules, the group is working on a system that will electronically reprogram the memory chips in the computer control module. Such "flash" chips will be soldered to the circuit board, preventing aftermarket tuners from replacing them with "hot" performance chips that may not meet emission regulations.

- Meeting new emissions limits mandated by the Clean Air Act, and a possible increase in the corporate average fuel economy standard. Those changes mean more sensors and wiring have to be added to cars, increasing costs and the potential for problems.

"It isn't a question of technology, the difficult question is cost effectiveness," said Jack Schickler, director of marketing and consumer relations.

- The Service Technology Group is working with the GM Electric Vehicles Group to develop an electric car that will be built in Lansing, Mich.
- The group is currently conducting a study to determine which recycling methods work best to provide a radiator coolant that equals the purity standards of new coolant.

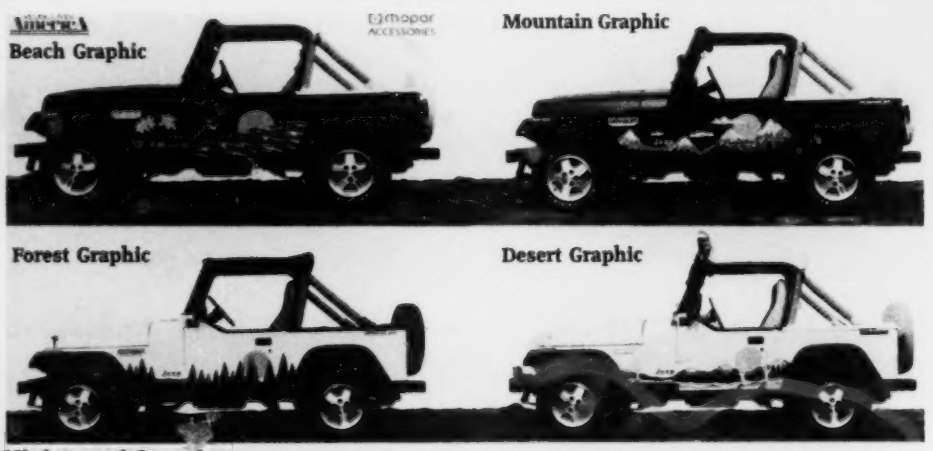
The Service Technology Group is working with the GM Electric Vehicles Group to develop an electric car.

The study is using coolant samples from more than 200 vehicles owned by GM employees, the majority of which are several years old. Samples were treated by current recycling methods. After recycling, coolant from more than half the methods failed to meet GM standards for corrosion.

Coolants that did pass are being used in a two-month simulated service test in GM vehicles.

- The group is developing testing, service and recovery procedures for HFC-134a, the refrigerant that will replace R-12 in automotive air conditioners. The planned conversion begins in fall 1992 on 1993 models.

Among the findings and recommendations is a need for more sensitive refrigerant leak detection devices.



Visions of America

Chrysler Corp.'s Service and Parts Operations is offering four graphic decal kits for Jeep Wranglers as a tie-in to the automaker's "Rediscover America" marketing campaign. Available as dealer installed accessory options, the graphics feature beach, mountain, forest and desert scenes.

Dealers report increase in service, parts business

The end of the Persian Gulf war and more marketing of service contributed to an increase in parts and service business in April from the same month a year earlier.

Shop business for the month was 101 percent of that in April 1990, as measured by the Automotive News Service Index. Of the five categories tracked, only repair orders written declined in the month-to-month comparison.

For the first four months of the year, parts and service business was 101.7 percent of that reported from the same period a year earlier, with all five indicators posting increases.

Shop parts and sales had the highest increase for April, rising 10.9 percent; the year-to-date figure is up 5.1 percent from 1990.

Dealers who reported an increase in service business gave reasons such as:

- Use of direct mailers to advertise service specials, including use of discount coupons to win new business.
- Increase in labor rates.
- Better management of business and inventories.
- The end of the Persian Gulf war.

Some dealers reported a decline in business. One noted no growth in his business due to the state of the economy, adding that the business did not seem to be attracting any new working-class customers.

Another dealership reported that its service, body shop and parts sales business were all weak.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross section of the nation's new-car dealers.

SERVICE INDEX 101★

	April, '91 vs. April, '90	Jan.-April, '91 vs. Jan.-April, '90
Gross Profit on All Labor and P&A Sales	+ 0.7%	+ 0.5%
Repair Orders Written	– 0.1%	+ 0.5%
Total Labor Sales (Customer & Warranty)	+ 2.5%	+ 2.4%
Shop Parts Sales (Customer & Warranty)	+10.9%	+ 5.1%
Sales of All P&A	+ 0.1%	+ 2.1%

★ Survey by Automotive News shows that dealers' service and parts business in April 1991 was 101 percent of business in April 1990. Service business in the first four months of 1991 was 101.7 percent of business in the corresponding period in 1990.

BRIEFS

MEMA begins survey of fuel injection market

ENGLEWOOD CLIFFS, N.J. — Eleven manufacturers of fuel injection parts and equipment will participate in a statistical reporting program sponsored by the Motor and Equipment Manufacturers Association.

The program will help participating manufacturers better estimate the size of the fuel injection parts and equipment market, develop market share and document sales trends.

To guarantee confidentiality, the participants' quarterly reports will be sent to a big six accounting firm and all original reports destroyed after consolidated reports are published.

More than 100 association members are currently participating in one or more of the group's statistical report programs.

Peugeot, Interstate add battery program

LYNDHURST, N.J. — Peugeot Motors of America Inc. has completed an agreement with Interstate Batteries for a program to help Peugeot dealers dispose of old batteries.

The removal of old batteries under the program does not cost dealers anything, said Ed Benz, Peugeot parts and service manager. Interstate will send dealers' used batteries to EPA-approved recycling centers. The program also includes delivery of new Interstate batteries to dealers. There are 180 U.S. Peugeot dealerships.

Nissan offers service program for used cars

CARSON, Calif. — Nissan Motor Corp. in U.S.A. has launched QualityGuard Plus, a service agreement program for used non-Nissan vehicles sold by Nissan and Infiniti dealers.

To support the program, Nissan has established Nissan Motor Insurance Holding Corp., a holding company; Nissan Motor Casualty Insurance Corp., a casualty insurance company; and Nissan Motor Insurance Services Corp., an insurance agency.

The program covers major mechanical systems of a vehicle. Coverage is available for 12 months/12,000 miles, 24 months/24,000 miles and 36 months/36,000 miles.

Orders for Ford diagnostic system top 1,000

DEARBORN, Mich. — More than 1,000 Service Bay Diagnostic Systems have been ordered by Ford and Lincoln-Mercury dealers since the first of the year, said Ford Motor Co.

The computerized information and diagnostic system, introduced at the National Automobile Dealers Association convention in February, can help pinpoint intermittent and hard-to-find driveability problems. Each unit is priced at $35,000, or dealers can rent units for as little as $19,000 a year, based on dealership size.

Ford said it plans to install 150 units a month.

CHANGE

FROM PAGE 1

just a day or two, while other plants will combine new-model changeover with vacation shutdowns.

There are notable exceptions to the quick changeover rule:

- General Motors' Lansing, Mich., assembly plants A and B will each be down about 16 weeks. as GM revamps the plants in an $89 million renovation and changeover to the all-new larger N-body cars.

The plants built Buick Skylark, Oldsmobile Calais and Pontiac Grand Am in the 1991 model year, but the Calais name will disappear for 1992, replaced by Achieva.

- GM's Wilmington, Del., plant, which built the 1991 Corsica/Beretta, will be retooled for more volume in the 1992 model run.

The additional volume will be necessary because the Linden, N.J., plant that also built Corsica/Beretta for 1991 will go down for more than a year to be equipped for S-truck output, scheduled to begin at Linden in fall 1992.

- GM's Flint, Mich., truck plant will go down at the end of the summer as its Jimmy, Blazer and Suburban tooling is transferred to Janesville, Wis. Flint will be outfitted for full-sized van production, scheduled to begin in fall 1992.
- Chrysler Corp.'s Newark, Del., plant will be down four weeks to be retooled for all Chrysler LeBaron J output after the company indefinitely idled its St. Louis (No. 1) assembly plant last month. Dodge Daytona tooling will go from the shuttered St. Louis plant to the Sterling Heights, Mich., factory.

Chief Statistician Anne E. Wright contributed to this report.

DUMPING

FROM PAGE 1

and in Japan.

The announcement of the filing came as no surprise in light of Big 3 pressure on the Bush administration for help against Japanese imports.

"Minivan dumping by Japanese producers is causing injury to the U.S. industry, consumers and workers," said the Motor Vehicle Manufacturers Association, which handled the announcement for the Big 3. Honda of America Manufacturing Inc., which is also a member of MVMA, was not involved in the petition.

The domestics estimate — on an annualized basis — they will lose sales of 100,000 minivans this year to Toyota and Mazda because of unfair pricing, said MVMA President Thomas Hanna.

MVMA said the Japanese minivan production was clearly destined for the U.S. market because from 1988 to 1990, minivan exports here increased from 38,900 to 95,363 units. In that two-year period, the Japanese market share grew from 4 percent to 12 percent.

The Big 3 charge that the short-term effect has been "serious distortions and injury to the U.S. market."

"Over the longer term, rising imports of dumped Japanese minivans seriously risk present and future investment by U.S. producers," the companies said in the the MVMA statement.

Dumping charges are complex. In its only previous complaint, the U.S. industry lost a 1975 case against cars from Europe and Japan.

A spokesman for Mazda said he has not had an opportunity to review the filings, but he said the MPV was not being dumped.

The Big 3 petition was filed with the Department of Commerce and the International Trade Commission, an independent body of six presidential appointees. The Commerce Department determines whether dumping exists; the ITC determines injury. If both occur, duties matching the "unfair pricing" are assessed on the imports.

It could take 10 months to wrap up the case. But if there is no preliminary determination of dumping within 45 days, the investigation will be terminated.

For months, there have been rumors that the Big 3 were preparing a case. Sources said the Big 3 also looked at filing a light-truck and sport-utility dumping petition but determined they had a better case with minivans. Hanna said the Big 3 chose minivans because of the substantial percentage of overpricing on the vehicles.

The Big 3 have been pressuring the Bush administration to take action against Japan for months — when the Big 3 chairmen came to Washington on two separate visits, and again in late April when 41 members of Congress went to Detroit.

Chrysler Chairman Lee Iacocca hinted at the impending action during the congressional visit.

"My Jeep Cherokee jumps from $25,400 to $38,800 (in Japan) — fees and distribution costs, they tell me — while the Toyota Previa heading this way drops from $22,808 to $19,590. The American consumer can buy most Japanese cars here, even after the boat ride, for less than the Japanese consumer can buy it right off the assembly line," Iacocca said.

"It could be that the Japanese automakers just have a soft spot in their hearts for American consumers," Iacocca told the Congress members. "Under those rules, dumping cars here to keep their people employed and to 'buy' a bigger share of the market is tough to prove, and everybody knows it's going on."

"The administration tells us, 'Give us a good dumping case and we'll move on it.' Why do we, the victims, have to take the lead? Why doesn't the government do its own investigation and enforce the law?" The petition was prepared by a prestigious Washington law firm, Wilmer, Cutler & Pickering. Lloyd Cutler was counsel to President Jimmy Carter.

Staff Reporter Kristine Breese in Los Angeles contributed to this report.

GMAC offers service contract for used vehicles

DETROIT — General Motors dealers who currently offer Value Guard service contract plans for new vehicles have a new weapon to help sell used vehicles.

General Motors Acceptance Corp. and its Motors Insurance Corp. unit introduced a new service contract plan June 1, called Value Guard Extra.

The service plan is for buyers of used vehicles with GM "Bumper to Bumper Plus" warranties that are still in effect.

Value Guard Extra, approved for sale in 37 states so far, supplements the warranty.

The warranty plan pays the deductible on the Bumper to Bumper Plus warranty, provides rental vehicle coverage up to $30 per day (maximum $150 per visit), and towing allowance up to $35 per disablement, said GMAC spokesman John Andrews.

He said the average cost to dealers is expected to be about $200.

GMAC said some dealers may want to give the plan away as an incentive for buying a used car, while others may mark it up 40 percent to 50 percent, using it to raise margins.

Bob House, owner of House Chevrolet Co. in Stewartville, Minn., said the plan has some marketing merits, especially because used cars are increasingly important to his business.

"In our particular area," House said, "we would probably sell it close to our cost and look at it as a way for the customer to gain that confidence in the used vehicle.

"The other thing we like is that it's an extended warranty from our manufacturer, rather than one of the independent companies," House said.

Mitsubishi rebates mean cash for dealers

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Mitsubishi Motor Sales of America Inc. is offering consumer rebates in California and Hawaii and dealer rebates in all its regions through June 30. The payments apply to 1990 and 1991 models.

California buyers will receive $500 on Galant and Eclipse; $650 on pickups. In Hawaii: $500 on Mirage; $750 on Eclipse, Galant and pickup, and $1,500 on Montero.

Dealer rebates vary from region to region. The payments are:

- California — $250 to $750 on Eclipse, Galant, Mirage, Montero and pickup, based on quota.
- Southwest — $200 to $1,500 on Eclipse, Galant, Montero and pickup; quota. Bonuses of $1,600 to $2,500 on Galant, pickup and Montero, based on number sold.
- North Central — $500 on Eclipse, $1,000 on Galant and $1,800 on Montero. Also, $250 on Eclipse starting with 13th sale.
- Southeast — $500 to $1,200 on Eclipse, Galant, Mirage, Montero and pickup, based on number sold.
- Northeast — $200 to $1,700 on Eclipse, Galant, Montero and pickup, based on number sold.

Legacy Sp' Sed.	$1,000
XT, XT6	$2,000

MAZDA

FROM PAGE 3

McCabe said dealers also expressed an almost unanimous desire for more regional programs and promotions, but he would not reveal what Mazda has planned.

Mazda did increase its outlays for dealer association advertising in the first quarter, while spending on national ad programs was reduced.

The downside to Mazda's increase is that May sales, which will be announced this week, are expected to show a decline from last year, McCabe said.

The reason: depleted inventories of some volume lines, especially the 626 and MX-6. Since Jan. 1, Mazda's supply of cars has fallen from 99 days to 55 days for U.S.-built models and from 72 days to 55 days for imports.

With the leaner inventories, the company has tightened the incentives.

During the first four months of this year, Mazda concentrated on customer rebates. In addition to the $1,500 on the MX-6 and 626, trucks carried a $500 rebate for most of the period.

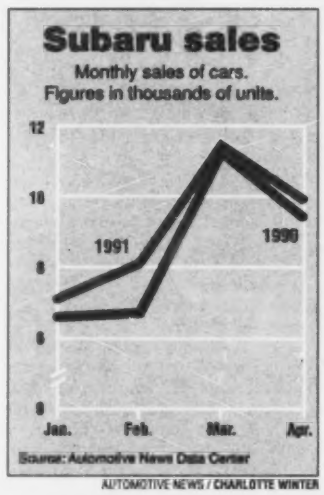
To help clear out 1990 models, Mazda offered buyer rebates of $750 to $1,500 on cars, $1,000 to $1,500 on trucks and $886 to $1,246 on MPV minivans in January and February.

But now Mazda has gone back to dealer cash.

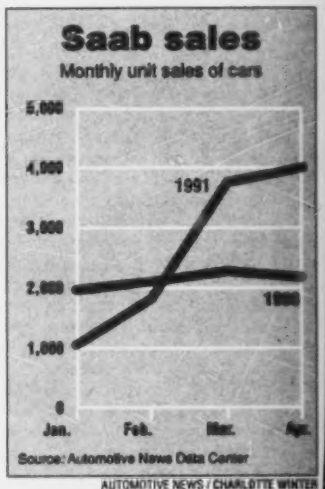
McCabe stressed that the short-term strategies worked in concert with long-term changes at the company. They include new advertising strategies, more emphasis on image building, new dealer development programs and increased factory-dealer communication.

Saab and Subaru thrive on 'more car for less'

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER



AUTOMOTIVE NEWS / CHARLOTTE WINTER



AUTOMOTIVE NEWS / CHARLOTTE WINTER

NEW YORK — Saab Cars USA and Subaru of America Inc., two other companies that have increased sales this year, gave new life to models with long, gray beards by selling a package of more content for less money.

Both companies added features and options on bread-and-butter models for 1991 without raising prices, or at least holding price hikes to a minimum. And both have made use of incentives.

"There is a real price-value consciousness," said William S. Kelly, Saab vice president of sales and marketing.

"People are looking at things in a little different way than they did in the '80s."

Through April, when industry car sales were down 16.6 percent, Saab sales were up 24.6 percent and Subaru sales were up 7.3 percent.

Although sales are up, they have risen over a weak 1990 period. In the first four months of 1990, Saab sales were down 19.7 percent from 1989, and Subaru sales were down 30.8 percent.

Remarkably, Saab's biggest improvement this year has been in the 900 model, a line that was introduced in 1978.

Saab sales started jumping in March after the company offered financing as low as 2.15 percent on the 900 and 4.35 percent for the 9000, as well as low-cost leases.

Sales of the 900 were up 34.4 percent through April to 7,550, comprising 71.2 percent of Saab's sales, compared to 65.7 percent for all of last year. The relatively spry 9000, introduced in 1985, made up 28.7 percent of sales, compared to 33.7 percent last year.

At Subaru, the star of the lineup is the Loyale, which was new in late 1984 and rebadged two years ago.

Subaru almost doubled Loyale sales through April to 11,298 cars — or 31 percent of the company's U.S. sales, compared to 16.7 percent at the same time last year.

The biggest change on the Loyale has been the addition of formerly optional features like air conditioning and power door locks and windows as standard equipment. The base Loyale wagon, for example, got an option package as standard equipment that would have cost $1,745 on last year's model.

Thomas R. Gibson, Subaru's president and chief operating officer, said Subaru took most of the money the company had been spending on incentives for the Loyale and put it into the equipment upgrade instead. Subaru is still offering a $500 incentive on some Loyale models.

Besides the lease and finance incentives that have worked so well for Saab, the company also introduced a 6-year/80,000-mile warranty last fall.

Optional features like anti-lock brakes were added to some models as standard equipment. And during the last two years, every model has gotten a slightly more powerful engine.

Saab also introduced a plain-wrapper 9000 last fall and a cheaper, non-turbo 900 convertible earlier this year.

LEASE

FROM PAGE 3

creases in retail lease activity this year, according to Joe McPartlin, director of GMAC's retail lease department, and Roger K. Meline, Chrysler Credit vice president of sales and marketing.

But now foreign manufacturers are really stirring up the market.

American Honda Motor Co.'s program is probably the most dramatic example. From April 4 to June 30, the company is promoting lease rates of $199 a month for a 60-month contract on its $15,000 Accord LX sedan, $219 a month on 48-month leases, and $249 a month on 36-month leases.

Dave Spyra, Honda Division ad manager, said that, although Honda's luxury Acura Division has had lease promotions, this was a first for the Honda brand.

The very attractive rates are the result of a combination of dealer and factory contributions, ranging from about $1,900 on a 36-month lease to about $2,500 on a 60-month lease, according to a Honda dealer. Dealers contribute the lion's share, though their participation in the program is optional.

Honda's lease program covers all Accords, though only LX was advertised in *USA Today* and on radio in top markets, Spyra said.

The program's been quite successful, according to dealers. Dana Martin, general manager at Southeastern Honda in Palm Bay, Fla., said his leasing business has doubled to 40 percent of his transactions during the promotion.

Some dealers question the wisdom of the 60-month offer because getting people back to showrooms quickly is leasing's major benefit. They are also concerned that many of the first-time lessees the program is drawing may not fully understand how difficult it is to get out of a five-year plan after three or four years.

Spyra said ads were intended only to get people into showrooms, and it is up to dealers to "take over and guide the customer" through the transaction. He also noted that the 60-month-lease ad is only one of three ads that highlight different prices and time periods.

Toyota Motor Sales U.S.A. Inc.'s promotion for a Toyota like Camry is also a first, according to Jim Hart, new-car sales manager for Page Toyota in Southfield, Mich. The importer is subsidizing the leases by offering what amounts to 6 percent financing, he said.

Toyota officials were unavailable for comment.

Toyota has been promoting its Camry leases through *USA Today*. They are available for 24 or 36 months, with a base Camry at $210 for 36 months and a well-equipped Camry Deluxe for $259.

To help reduce monthly payments, Nissan Motor Corp. in U.S.A. is giving dealers a $1,000 incentive on every Maxima they lease and $1,500 on the 300ZX, according to Oscar Li Donni, new-car sales manager for Newton Nissan in Newton, Mass.

Dealers can use the money to write whatever lease terms they want, depending on how much of the incentive they want to give away, he said.

OBITUARIES

Roger Rinke

GROSSE POINTE SHORES, Mich. — Roger Rinke, owner and president of Roger Rinke Cadillac in Warren, Mich., died May 30. Rinke, who opened the dealership in 1964, was 62.

BIG 3

FROM PAGE 1

the recession continues through the fourth quarter. (See story, Page 2.)

Analysts estimate the Big 3 will have to make capital expenditures of about $80 billion between 1991 and 1995 to stay in business, Robert Stempel, chairman of General Motors, told the Congressional visitors. "Obviously, you can't finance product programs out of current earnings when there aren't any," he said. GM lost $1.17 billion on operations in the first quarter.

But borrowing money has become tougher for the Big 3 because credit ratings have been downgraded, he said. "That means we pay a higher rate of interest when we borrow, draining resources that could have gone to product programs and other investments."

Ford Chairman Harold Poling told the Caucus that the Big 3's negative net cash flow — before borrowing — increased to $7.5 billion in 1990, up from $4.7 billion a year earlier, meaning the companies' spending continues to outstrip revenues.

"We are concerned that the Japanese will take advantage of their financial strength in their home market to increase their U.S. market share as they did in the early 1980s," Poling said.

"The weak economy and its impact on corporate profitability pose the risk of delays and reductions in product spending," he added.

Chrysler Corp. is hurrying to crank out badly needed new products but worries that it may not be able to keep its plan on track.

"Our $16.4 billion product plan is what we feel we need to invest in our business to compete in the years ahead. But it's also a tremendous drain on our resources," said President Robert Lutz.

"Considering the economic and market environment in which we have to generate our revenues, it's going to be tough to keep this aggressive product program intact," Lutz said.

● **General Motors** argued against a proposed corporate average fuel economy increase of 40 percent by 2001.

GM, whose domestic car fleet fell below the 27.5 mpg standard in the 1990 model year, said even its European fleet averages only 33 mpg, an area of the world where gasoline costs $3 to $4 a gallon.

The improvement in fuel economy is only 16.6 percent despite the fact that 90 percent of GM's European cars are the same size or smaller than the compact Chevrolet Cavalier. In addition, the cars sold in Europe generally have four-cylinder engines, 8 percent have a diesel engine, 97 percent have a manual transmission (which improves fuel economy) and fewer than 3 percent have fuel-eating air conditioning.

To meet some proposed CAFE requirements, GM would have to downsize cars, Stempel argued. "To put it more bluntly, we'd have to rip up our product plans and start over."

● **Ford** is attempting to cut 25 percent off the time it takes to produce a new car, squeeze 20 percent out of its product investment cost and improve supplier efficiency, said Alexander J. Trotman, executive vice president for North American Automotive Operations.

But the economy and regulations stand in the way of Ford's cost-cutting efforts. Complying with the new Clean Air Act, for example, will require a $2.6 billion investment by Ford and cost $600 per car, Trotman said.

● **Chrysler** faces staggering health care and retirement costs that make it difficult to compete with Japanese transplants.

Health care costs at Chrysler average about $700 for each vehicle built, said Robert Miller, vice chairman.

Retiree costs also amount to $700 per car, compared with $30 at Japanese transplants, Miller said. "That's the advantage of locating in a green field," he said, "and of hiring young, strapping workers who are a whole generation away from retirement."

Holiday cuts U.S. output

By Bob DeMayer
SPECIAL CORRESPONDENT

U.S. car production dipped last week, due principally to last Monday's holiday.

Model changeover downtime at three GM plants also played a part in the dip. The plants are Detroit-Hamtramck, Mich.; and Lansing, Mich., A and B.

U.S. carmakers scheduled 93,165 units last week, 11.29 percent below the preceding week and 23.33 percent below last year.

Year-to-date U.S. car production is 2,276,780, down 12.65 percent from 1990.

Truckmakers planned to build 65,038 units last week, 17.13 percent below the prior week and 18.21 percent below the comparable week last year.

So far this year, 1,337,571 trucks have been assembled, 22.33 percent behind 1990.

Mack Trucks Inc.'s decision to halt production at its Hagerstown, Md., plant for a second week this spring reflects slowing heavy-duty truck sales throughout the industry, analysts say.

General Motors scheduled one shift of overtime last Saturday at four car plants: Linden, N.J.; Arlington, Texas; Fairfax, Kan.; and Oklahoma City.

The Chevrolet Corsica and Beretta are produced at Linden, and the Cadillac Brougham and the Chevrolet Caprice sedan are made at Arlington. The Pontiac Grand Prix is produced at Fairfax, and the Buick Century sedan and wagon, the Oldsmobile Cutlass Ciera sedan and wagon and the Pontiac 6000 sedan and wagon are made at Oklahoma City.

Chrysler's St. Louis (No. 2) truck plant worked two shifts of Saturday overtime.

CANADA: Canadian car production was estimated at 26,872 last week, up 18.53 percent from the prior week and up 4.37 percent from the year-ago week.

Truck production last week was estimated at 20,007, up 27.52 percent from the prior week and 5.16 percent above the year-ago week.

Year-to-date, truck production in Canada is down 13.48 percent.

GM scheduled overtime last Saturday at its Oshawa, Ontario, truck plant.

The Associated Press contributed to this report.

Grand Cherokee ripens as first fruit of platform approach

In recent years, automakers have developed new products and delegated authority in new ways. Last week, we reported on General Motors H-cars; next week, we look at Ford's Econoline and Honda's Accord station wagon.

How POWER works at:
GM
CHRYSLER
FORD
HONDA

In February 1990, the team developing the 1993 Jeep four-door sport-utility met at Chrysler Corp.'s proving ground in Chelsea, Mich.

People like Bernard Robertson, general manager of Jeep-truck engineering, were driving prototypes of the new Jeep Grand Cherokee, code-named ZJ, around the track surrounded by Michigan farmland. They were comparing the dully painted prototype to its predecessor, Jeep Cherokee, and to competing sport-utilities.

During a point-by-point evaluation, several members of the group started talking about the rear seat. Soon, a consensus developed that it needed improvement.

So the team set to work. They tried reshaping the seat, bringing the cushion closer to the side of the vehicle. They worked until they were satisfied that a bigger, reshaped rear seat enhanced the vehicle.

The larger seat carried an extra cost, but the team kept within the overall budget by making small cuts elsewhere.

"The whole team agreed that was something we wanted to do, and we just agreed to do it and executed it," said Robertson.

That, he added, is the way Chrysler operates today under its new platform team organization.

"In the old days — not so very long ago — something like that seat would have gone to several product decision meetings; (former Chrysler Motors President) Harold Sperlich would have looked at it; it all would have been done in a studio on a clay model that you couldn't sit in and couldn't drive," Robertson said. "In the end, we'd have gotten whatever we got. Today, we are empowered enough to actually *do* something to the product early enough so that the customer benefits."

Notes spokesman Tom Kowaleski: "This really reflects where the decision-making ability rests today. Bernard Robertson and

Dealers cut back: 1991 model output tumbles 1.1 million

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 and their dealers have written off the 1991 model year and are hunkered down for a long, hot summer, hoping for recovery when the 1992 model year begins this fall.

Dealers say they are ordering only select, proven good-selling models, and factories are obliging them by not foisting unwanted, slow-selling product on the dealers. Some manufacturers have altered buildout policies to allow dealers to maintain lean, fast-moving inventories.

Imports, Ford add rebates, Page 46

That could mean a fast start for 1992 models if the economy and consumer confidence oblige.

Chrysler Corp. has dropped some buildout stipulations. It no longer requires dealers to order slow-moving vehicles when they order

Mercedes, Mitsubishi discuss plan for sharing new sport-utility

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

SINDELFINGEN, Germany — Mercedes-Benz AG and Mitsubishi Motors Corp. are discussing a plan to jointly develop and produce a new sport-utility that would replace Mercedes' four-wheel-drive Gelaendewagen, officials of the German automaker confirmed at the company's annual financial meeting here last week.

Mercedes bolsters veto power, Page 3

According to a company source, meanwhile, the automaker has selected next January's Detroit auto show for the world launch of its new S-class coupe. The decision to unveil the coupe in Detroit — in either a V-8 500SEC or V-12 600SEC version — was reached at a senior management confab in early June, the source said.

The Mitsubishi talks were confirmed by Mercedes Chairman Werner Niefer, who offered no details. "There is no conclusion," sa. Niefer. "All possibilities are open, nothing is settled."

According to a Mercedes official, each company would badge a version of the 4wd vehicle for itself

Big 3's van-dumping complaint shows fear, frustration

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Big 3 say they may delay or cut investment in minivan programs unless the government keeps Japanese companies from dumping minivans in the United States.

They also say the job-security provisions of last fall's UAW contract are in jeopardy in subsequent contracts if dumping isn't stopped.

General Motors, Ford Motor Co. and Chrysler Corp. say they fear that Japanese minivans will duplicate the pattern of other automotive segments such as luxury cars: One or two companies lead the way and others follow in short order.

The allegations come from the domestic makers' petitions to U.S. Commerce Secretary Robert A. Mosbacher and U.S. International Trade Commission Secretary Kenneth R. Mason, asking for relief from what the Big 3 allege is unfair pricing by Mazda and Toyota. Nissan and Mitsubishi also were named because they sold a small number of minivans in the United States during the three-year period discussed in the complaint. The petition was filed May 31.

Crucial to the domestics' case is their allegation that wholesale prices for minivans sold in the United States are substantially below comparable prices in Japan.

The petition reveals the fears and frustrations of a domestic industry that has been losing market share to the Japanese for a decade:

- The dumping is one cause of a

Watchdogs say Ford fixing cars in Canada under secret warranty

Company considers fuel pump repairs to be goodwill

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. calls it goodwill assistance, but consumer watchdog agencies in the United States and Canada say it amounts to secret warranties.

At issue is what the Automobile Protection Association in Canada says amounts to excessive fuel pump failure on the 315,000 1988 to 1990 Ford Tempo and Mercury Topaz models sold in Canada. The failure causes the vehicles to stall during warm weather.

George Iny, president of the consumer watchdog agency, estimates that at least 20 percent of the vehicles have been affected after the warranty expires, yet Ford has failed to notify owners and has paid for out-of-warranty repairs inconsistently.

"It appears that consumers who complain loud and clear have a decent chance of getting secret warranty coverage," Iny said.

Ford has paid for all or some of the repair costs in 35 percent of the fuel pump cases reviewed by Iny's organization under a goodwill assistance plan that has been in existence since 1983, said Ford of Canada spokesman John Jelinek. Dealers have goodwill forms that they submit to the factory at their discretion.

Jelinek said goodwill kicks in when a warranty expires and is granted based on how well a dealer presents the customer's argument. Jelinek said Ford is aware of the fuel pump problems, but denied Iny's allegations. "We wouldn't risk the goodwill of our customers by running secret warranties."

Jelinek said there hasn't been a similar problem with the 978,000 1988 to 1990 Tempos and Topazes that were sold in the United States. Doug Nelson, an investigator with the Center for Auto Safety in Washington, says he isn't so sure.

"Tempos, Topazes have always had trouble with chronic stalling," Nelson said. "The fuel pump could be the problem."

Nelson said the cases may not have been reported because generally when cars stall and motorists get them started again, they tend not to think it's a serious problem.

Nelson said he received a few complaints from consumers regarding fuel pump failure on 1986 and 1987 Tempos and Topazes. "A few were multiple failures," Nelson said. "I am going to have to look into this more."

Nelson said several million cars, at any one time, may be covered by what manufacturers call goodwill assistance. "We call them secret warranties," Nelson said. "We see it more as unequal treatment."

Iny demanded that Ford treat all customers equally in a May 31 letter sent to Ford of Canada President James O'Connor.

Ford called attention to the problem on 1988 to 1990 models in an April 1990 service bulletin issued to its Canadian dealers.

An earlier bulletin was issued regarding 1986 and 1987 Ford Tempo, Taurus and Escort and Mercury Topaz and Lynx models.

The bulletins noted that the vehicles tended to stall during the transition period between winter and spring, and on hot days.

Jelinek said it appears to be a fuel problem rather than a fuel pump failure because the replacement of the pump did not solve the problem in some instances. He explained that Canadians use a more volatile fuel during the winter months, and that fuel could be the

Ford's new Sierra

Ford of Europe is finishing development of the next generation Sierra, a car that is expected to bow at the Geneva auto show in 1993. Wagon, coupe, hatchback and sedan (pictured here) versions are planned. Power will come from a variety of four- and six-cylinder engines. The current generation Sierra will be nearly 10 years old when the new model is introduced.

Toyota plant to have the amenities

Air conditioning, lounges, shorter lines should help boost output

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Air conditioning. Soothing background music. Comfortable staff lounges for hourly breaks. Spa-like bath and shower rooms. Flowers. Quiet.

No, not a law office.

Toyota Motor Corp. is building these amenities and more into a $1.1 billion, greenfield factory in western Japan that will turn out 200,000 cars a year while maintaining the gentle illusion that hammering steel into automobiles is about as difficult and dirty as shuffling paper.

More than $7 million of the investment will be spent on such quality-of-life features as shower and bath facilities, according to Toyota officials.

"We want to create a completely new type of plant, entirely different from the blunt, drab effect of plants now," says director Tadaaki Jagawa, who oversees engineering of the new factory in Fukuoka Prefecture, about 700 miles southwest of Tokyo on the island of Kyushu.

Toyota's motives for its largess are simple: to boost output in the face of Japan's declining, increasingly choosy labor force.

Like all manufacturers in Japan, Toyota is finding it increasingly difficult to attract new line workers and to hold on to older ones. The automaker, Japan's biggest, says it is coping with annual turnover of 10 percent a year on its production lines, or between 4,000 and 5,000 workers a year.

"The rate is almost double what it was five or six years ago, especially among younger people," Jagawa says. "You can increase productivity by 5 percent if workers are more experienced," he said.

But Jagawa thinks of Fukuoka as more than just a solution to the labor shortage. From a production engineering point of view, Jagawa said, "Fukuoka will be the model plant for Toyota," designed to appeal to workers but also to assure higher quality and efficiency.

The new plant, which will produce a Cressida-level model starting in 1993, will use 2,000 workers, in both blue and white collar jobs, a savings of 500 jobs over a typical Toyota plant, Jagawa said.

The resulting gain in productivity means that each Fukuoka worker, on average, will be turning out 100 cars a year, a rate of output that compares with 79 to 93 cars a year at other Toyota plants in Japan.

To be sure, the planned-for efficiency gains will not be realized through happier workers alone. Because the plant is being built in an uncrowded rural area and will be able to spread out, Toyota will be able to design in more efficient manufacturing processes than it can in its congested Toyota City complex in central Japan.

To replicate what it is planning in Fukuoka, Jagawa says, Toyota would have to combine two of its older plants into one complex to get enough space to work with.
